PRINTING CONTRACT.—The Committee for Finance of the Vestry of the Parish of St. Mary Abbott's, Kensington, in the county of Middlesex, will meet at the Vestry Hall of the said parish, on TUESDAY, the 30th day of JUNE inst. to receive TENDERS and CONTRACT for the PRINTING required by the said Vestry during the year, commencing on the 1st day of JULY next.—Printed forms of Tender and further particulars can be obtained on application at my Office as above, where Tenders are to be delivered, sealed, and endorsed "Tender for Printing," on or before FOUR o'clock on MONDAY, the 29th day of JUNE inst. No Tender will be received except it be made upon one of the said printed forms. The Vestry does not bind itself to accept the lowest or any Tender.

By order, REUBEN GREEN, Clerk of the Vestry.

Vestry Hall, High-street, Kensington, June 15, 1863.

PARISH of ST. MARY ABBOTT'S, Kensington, in the county of Middlesex.—CONTRACT for BROKEN BLUE GUERNSEY GRANITE. The Works, Buildings, and Sanitary Committee will meet at the Vestry Hall, Kensington, on FRIDAY, the 26th instant, to receive TENDERS for the SUPPLY of 1,000 yards of BROKEN BLUE GUERNSEY GRANITE, to be delivered at the Draw Dock, Hammersmith, free of all tolls and charges, and in such quantities at a time as may be directed by Mr. JAMES BROADBRIDGE, the surveyor to the Vestry, the whole quantity to be delivered within one month after the acceptance of the said Tender. Form of Tender and further particulars may be obtained on application at Mr BROADBRIDGE'S Offices, Vestry Hall aforesaid. Tenders to be sealed, and indorsed "Tender for Granite," and to be delivered at my Office by or before FOUR o'clock in the afternoon of FRIDAY, the 26th instant. No Tender will be received unless made upon one of the said printed forms. The Vestry do not bind themselves to enter into a written Contract, and to pay the expense thereof.

By order, REUBEN GREEN, Clerk of the Vestry.

Vestry Hall, Kensington, June 15th, 1863.

PARISH of ST. MARY ABBOTT'S, Kensington, in the county of Middlesex.—CONTRACT for BROKEN FLINTS.—The Works, Buildings, and Sanitary Committee will meet at the Vestry Hall, Kensington, on FRIDAY, the 26th instant, to receive TENDERS for the SUPPLY of 5,000 Yards of BROKEN FLINTS, to be delivered at the Draw Dock, Hammersmith, free of all tolls and other charges, and in such quantities at a time as may be directed by Mr. JAMES BROADBRIDGE, the surveyor to the Vestry. The whole quantity to be delivered within two months after the acceptance of the said Tender. Form of Tender and further particulars may be obtained on application at Mr BROADBRIDGE'S Offices, Vestry Hall aforesaid. Tenders to be sealed, and endorsed "Tender for Flints," and to be delivered at my Office by or before FOUR o'clock in the afternoon of FRIDAY, the 26th instant. No Tender will be received unless made upon one of the said printed forms. The Vestry do not bind themselves to accept the lowest or any Tender. The Contractor to enter into a written Contract, and to pay the expense thereof. By order,

REUBEN GREEN, Clerk of the Vestry.

Vestry Hall, Kensington, June 15, 1863.

LIVERPOOL CORPORATION WATER-WORKS.—To CONTRACTORS and PIPELAYERS.—The Council of the Borough of Liverpool desire to receive TENDERS for EXCAVATING TRENCHES and LAYING a LINE of 20-INCH WATER PIPES, from a point near Prescot to Green-lane, near Liverpool, a distance of about 8,650 lineal yards. The line is chiefly along the high road from Liverpool to Prescot. Plans and sections can be seen, and specifications with form of Tender obtained, on application and payment of one guinea, at the Waterworks Engineer's Office, 58, Hotham street, Liverpool, on and after WEDNESDAY, the 17th inst. sealed Tenders, directed to the Town Clerk of Liverpool, and marked "Tender for Pipelaying, &c." to be delivered at the Town-hall, Liverpool, not later than TWELVE o'clock on THURSDAY, the 25th inst. The Council do not bind themselves to accept the lowest or any Tender.—By order,

WM. SHUTTLEWORTH, Town Clerk.

Town-hall, Liverpool, June 13th, 1863.

CONTRACTS.

WEST HAM LOCAL BOARD of HEALTH.—The Local Board of Health for the District of West Ham, in the County of Essex, are prepared to receive TENDERS for LAYING GRANITE CURB, and also for supplying such Road Metal and Labour as may be required in making and repairing the streets called Eagle-street, Arthur street, Poplar street, Emily street, High street, Nelson-street, Francis-street, and Lilliput-road, all in Hallsville, within the said district, according to plans, sections, specifications, and conditions prepared by Mr. MARSHALL, the Surveyor of the Board, which may be seen at the Office, Rokeby House, in Stratford, where also forms of Tender may be obtained, together with any further information required. Tenders, endorsed, "Tender for Roads," are to be sent to me on or before MONDAY, the 29th day of JUNE instant. By order of the Board,

CHARLES WILSON, Clerk.

Rokeby House, Stratford, E. June 18, 1863.

WEST HAM LOCAL BOARD of HEALTH.—The Local Board of Health for the District of West Ham, in the County of Essex, are prepared to receive TENDERS for the CONSTRUCTION of a SEWER and ROAD, to be called Shirley-street, Hallsville, being within the district of the said Board, according to plans, sections, specifications, and conditions prepared by Mr. MARSHALL, the Surveyor of the Board, and which may be seen at his Office, Rokeby House, Stratford, where also forms of Tender may be obtained, together with any further information required. Tenders, endorsed "Tender for Sewer and Road," are to be sent to me on or before MONDAY, the 29th day of JUNE instant.—By order of the Board,

CHAS. WILSON, Clerk.

Rokeby House, Stratford, E. June 18th, 1863.

TO BUILDERS.—Persons desirous of TENDERING for PULLING DOWN and RE BUILDING a Set of FARM BUILDINGS at Wood-end Farm, in the parish of Kempston, and for Building a Pair of Cottages near to the Farm, the property of Jos. Tucker, Esq. of Fareham, Bury, may see the plans and specifications at the house of Mr. EDWARD WHITE, at Wood-end Farm (who will show the site of the buildings), from MONDAY, the 22nd, to MONDAY, the 29th JUNE (inclusive). Tenders are to be sent in on or before TWELVE o'clock on MONDAY, the 29th JUNE, 1863, to WILLIAM WATSON, Surveyor, Henlow, Biggleswade. The lowest or any Tender will not necessarily be accepted.

Henlow, 17th June, 1863.

AYSGARTH PARISH CHURCH, Wensleydale, Yorkshire.—To BUILDERS and OTHERS.—Plans, drawings, and specifications for the RESTORATION and partial RE-BUILDING of the above may be inspected at the Vestry of the said Church, from MONDAY, the 29th inst. to SATURDAY, the 11th of JULY. Quantities will be furnished by post to such parties as have received Tenders from them. Tenders, endorsed "Tenders for the Restoration of Aysgarth Church," to be forwarded to J. GREEN, Architect, Portsmouth, near Todmorden, on or before the 14th of JULY next.—The Committee do not pledge themselves to accept the lowest or any Tender.

TO LIGHTERMEN, CARMEN, and OTHERS.—The Directors of the Chartered Gas Company are prepared to receive TENDERS for the LIGHTERAGE and CARTAGE of COALS, in accordance with a specification, printed copies of which may be obtained at the Company's several Offices, Hornsey-road, Westminster; Goswell-street, St. Luke's; and Curtain-road, Shoreditch. Proposals to be sent in on or before FRIDAY, the 26th instant, addressed to me, and indorsed "Tender for Lighterage and Cartage."

JOHN ORWELL PHILLIPS, Secretary.

Horsefery-road, Westminster, June 12th, 1863.

METROPOLITAN IMPROVEMENTS.—BUILDING LAND, at Southwark, Mile End, and King-street, Covent Garden. The Metropolitan Board of Works hereby give Notice that they are prepared to receive TENDERS from parties who may be willing to take, on building leases, certain Plots of GROUND situate respectively in Southwark-street, Southwark, in the county of Surrey; Burdett-road, Mile End; and King-street, Covent Garden, in the county of Middlesex.

Particulars, conditions of sale, form of Tender, and every information may be obtained in the Superintending Architect's Office at the Office of the Board, between the hours of NINE a.m. and FOUR p.m.

The Tenders must be on the printed forms supplied at the Office of the Board, and be delivered, under separate sealed covers, endorsed "Tender for Land at Southwark, Mile End, Old Town, or King-street, Covent Garden, as the case may be, and addressed to the Clerk of the Board, at the Office of the Metropolitan Board of Works, Spring gardens, S.W.

The Board do not bind themselves to accept the highest or any Tender.

JOHN POLLARD, Clerk of the Board.

Spring gardens, Charing Cross, 21st May, 1863.

TO STONEWARE PIPE-MAKERS and OTHERS.—The Sewers Committee of the Local Board of Health of the City and Borough of Bath are desirous of receiving TENDERS for the SUPPLY of GLAZED STONEWARE SEWAGE PIPES for TWELVE MONTHS. The probable quantity required will be 2,500 feet of 12-inch, 6,000 feet of 9 inch, 300 feet of 8-inch, with junctions and bends. The pipes to be of the best quality, free, and to be supplied from time to time in such quantities as may be required, from a depôt, to be provided by and at the cost of the Contractor, in Bath, where a sufficient stock must be kept in hand to meet the demand. Tenders upon the printed forms, sealed, and endorsed "Tenders for Pipes," and addressed to the Sewers Committee, 6, Orange Grove, Bath, to be sent in on or before SEVEN o'clock in the forenoon of THURSDAY, the 25th JUNE, 1863. A sample 6-inch, a 9-inch, and a 12-inch pipe, with maker's name painted thereon, also to be delivered with each form for Tender, free of all charge, such pipes to become at once and remain the property of the committee. The committee do not pledge themselves to accept the lowest or any Tender. Forms of Tender to be obtained from Mr. ALFRED MITCHELL, Engineer, 6, Orange Grove, Bath.—By order of the committee, ALFRED MITCHELL, Engineer.

June 16, 1863.

[*For remainder of Contracts see next Page.*

CONRACTS.

NEW CHAPEL and SCHOOL-ROOMS, WATLING-STREET, CANTERBURY.—Builders willing to CONTRACT for the above building may see the plans, receive bill, and candition, at, and after THURSDAY, the 18th JUNE inst. between NINE and FIVE p.m. by applying to Mr. ANDREW PENFIELD, Builder, Parade, Canterbury. Tenders sealed and endorsed to be delivered to the Rev. VALENTINE WARD, 9, St. George's-place, Canter ury not later than MONDAY, the 29th of JUNE, AT TWELVE o'clock, noon. For any information, and for copies of the quantities, apply to the Architect. The lowest or any of the Tenders not necessarily accepted.

W. F. POULTON, Architect,
Victoria-road, Reading.

GAS WORKS TO BE SOLD or LET.—TO BE LET, by TENDER, for a term of seven, fourteen, or twenty one years, at the option of either party, all those GAS WORKS and PREMISES situate at St. Ives, in the county of Cornwall, known as the "St. Ives Gas Works, comprising a gas-house, dwelling house, office, coal cellar, coke-house, and yard, with the plant thereto belonging, and a convenient number of gas holders for the same. These works are conveniently situated, near the sea, at a low level, and are capable of great extension. A considerable length of new mains has recently been laid, and the whole is well worthy the attention of enterprising capitalists. The taker will be required to enter into a lease containing the usual covenants, and to execute a counterpart thereof.

For viewing the premises, and for further particulars, application may be made to the undersigned, to whom sealed Tenders, stating the utmost rent that will be given, should be forwarded on or before the 1st day of JULY next, soon after which the person who so Tender may be accepted will have notice thereof. The proprietor would not object to sell the works at a fair value.

W. TOLMIE TRESIDDER, Solicitor, St. Ives.

Dated St. Ives, 6th June, 1863.

TO BUILDERS.—Persons willing to contract with the Justices of the County of Kent, for the ERECTION of a POLICE STATION at SEVENOAKS, may see the plans and specifications at the Office of the County Surveyor, Maidstone, any day, except Sunday, between the hours of TEN and FIVE. The work is to be tendered for agreeably to the form of Tender to be obtained at the County Surveyor's Office, where sealed Tenders, endorsed "Tender for Sevenoaks Police Station," are to be delivered by NINE o'clock in the forenoon of THURSDAY, the 25th instant; and persons desirous of tendering are to be in attendance at the Courts of Justice, Maidstone, at HALF PAST TWELVE o'clock on that day. Neither the lowest nor any other Tender will be accepted unless approved of in all particulars; and security will be required for the proper performance of the contract.

H. A. WILDES, Clerk of the Peace.

Maidstone, June 8, 1863.

WYCOMBE UNION.—PARISH of CHEPPING WYCOMBE.—To HOUSE and LAND VALUERS, ESTATE AGENTS, ENGINEERS, and OTHERS.—Notice is hereby given, that the Guardians of the Poor of the Wycombe Union are prepared to receive TENDERS up to the 27th of JUNE inst. not for the VALUATION of the whole of the RATEABLE PROPERTY in the Parish of CHEPPING WYCOMBE, pursuant to an order of the Poor-Law Board, issued under the provision of the 6th & 7th Wm. IV. cap. 96, and the following are among other conditions to be posed by the Guardians. That the contract be entered into upon the acceptance of any Tender, of all the rolls subject to the approval of the Poor Law Board. That the valuer shall be bound to complete his valuation on or before the 25th of DECEMBER next. That he shall also be bound to support his valuation in cases of appeal before the Union Assessment Committee, Special and Quarter Sessions, for seven years from the date of his contract, being paid only by the scale of allowances provided by the regulations of the committee or courts he may be required to attend. The valuer to have the use of the maps belonging to the county rate and overseers, and which are deposited in the vestry of the parish church. The acreage of the parish is 6,260a. Population, according to last census, 4,153; number of houses, 907. Tenders are to be sent to me not later than SATURDAY, the 27th of JUNE next, addressed "Tender for the Valuation of Chepping Wycombe." The Guardians do not bind themselves to accept the lowest or any Tender. By order of the Board,

THOS. J. REYNOLDS, Clerk to the Guardians.

High Wycombe, 3rd June, 1863.

TO BE LET, by TENDER, for a term of five years, or from year to year, that long-established and well-accustomed Spirits Vault and Public House known as the DOLPHIN INN, situate in the chief thoroughfare in the principal business part of the borough of Stoke-upon-Trent, called Stoke-upon-Trent, will be entered upon in August next; and Tenders, addressed to the Administrator of the late S. ALCOCK, Esq. Cobridge, Stoke-on-Trent, will be received up to JUNE 30th, 1863. The Advertisers are not bound to take the highest or any offer; but they will select, without prejudice, the most eligible applicant.

TO CONTRACTORS, ROADMAKERS, and OTHERS.—TRANMERE IMPROVEMENT ACT, 1863.—The Local Board for the District of Tranmere, as duly formed by the above Act, require TENDERS for the construction of a MAIN SEWER in the Valley Heading from Whetstone-lane southwardly, with the requisite Junctions, Branches, Manholes, Gullies, and Ventilating Shafts, and for the Making of a ROAD over the same, being a length of about 4,000 yards. Plans, sections, and specification, &c. may be seen on application to Mr. W. A. RICHARDSON, C.E. Surveyor to the Local Board, at his Office, Hoylake, Tranmere; and after MONDAY, 22nd JUNE next, and copies of the specifications and form of Tender may be obtained on payment of 1l. Sealed Tenders, made on the printed form only, to be addressed to me, and left at my Office not later than THURSDAY, 23rd JULY next. Contracts and Bonds will be prepared by the Law clerk to the Local Board at the expense of the contractors. Security will be required for the due performance of the work. The Local Board do not bind themselves to accept the lowest or any Tender. By order,

GEORGE LLOYD, Law Clerk to the Local Board.

Public-office, Hoylake, Tranmere, 24th May, 1863.

TO BUILDERS.—NEW BAPTIST CHAPEL, KEIGHLEY.—All Contractors willing to TENDER for the whole or any portion of the WORKS, are requested to send applications for sight of quantities per post to the undersigned not later than MONDAY, the 22nd instant.

PAULL & AYLIFFE,
India-buildings, Cross street, Manchester

Dated 16th June, 1863.

TO BUILDERS. — Persons desirous of CONTRACTING for the ERECTION of TEN HOUSES at Newington, near Sittingbourne, Kent, may see plans and specifications on application to Mr. F. T. COLWELL, Architect, 9, Princes-terrace, Prince of Wales-road, Haverstock-hill, on and after WEDNESDAY, JULY 1st. Tenders to be sent in not later than FIVE o'clock JULY 8th, sealed, and endorsed "Tender for Pemberton-terrace, Newington, Kent."

LANCASHIRE and YORKSHIRE RAILWAY.—The Directors are prepared to receive TENDERS for the CONSTRUCTION of a RAILWAY from the New Bolton Street Station, in Salford, to the Victoria Station, Manchester. Plans may be seen, specifications and Forms of Tender obtained, at the Engineer's Office, Hunt's Bank, Manchester, on and after MONDAY, the 22nd JUNE instant. Tenders properly enclosed and sealed to be delivered at the Secretary's Office, Manchester, not later than TWELVE o'clock on MONDAY, the 6th JULY proximo.

WILLIAM S. LAWN, Secretary

Manchester, 15th June, 1863.

TO BUILDERS. — Persons desirous of TENDERING for the ERECTION of a CHAPEL, SCHOOL-ROOMS, &c. at Redruth, in the county of Cornwall, can inspect plans and specifications at the Office of THOMAS SIMPSON, Architect, Nottingham, on and after FRIDAY, the 19th, and FRIDAY the 26th day of JUNE; and at the Vestry of the United Methodist Free Church, Redruth, on MONDAY, the 29th day of JUNE, until SATURDAY, the 11th day of JULY. Sealed Tenders to be delivered at the Offices of Mr. THOMAS SIMPSON, Nottingham, not later than the 15th day of JULY, endorsed, "Tender for Chapel." The lowest or any Tender not necessarily accepted.

BRISTOL LOCAL BOARD of HEALTH.—To PAVIORS and OTHERS.—The Local Board of Health of the City and County of Bristol hereby give notice that they intend to CONTRACT for THREE YEARS, commencing the 29th day of SEPTEMBER next, for the performance of the undermentioned Works, viz.:—

CARRIAGEWAYS.

1st.—For Hauling Stones from any place within the City and County of Bristol, and Laying the same in the Streets.

2nd.—For Re-pelling and Re-laying old Pelled Stones.

3rd.—For Hauling and Laying Rag Pitching.

4th.—For Re-laying Rag Pitching.

Persons willing to engage in the above Works are requested to deliver in their TENDERS at the Office of the said Local Board of Health, No. 13, Prince street, on THURSDAY Morning, the 2nd day of JULY next, at TEN o'clock precisely, on which day the Committee will meet to treat upon the same. A printed specification of the Works to be done, and a Form of Tender, may be previously had, either on personal application or by letter, post paid, addressed to the Clerk, at the Offices, No. 13, Prince-street, Bristol, where any further information may be obtained. The party contracting will be required to give sufficient security, to be approved of by the said Local Board, for the due and faithful performance of his Contract. The Local Board will not hold themselves bound to accept the lowest or any Tender.—By order of the Committee,

JOHN G. HAVEN, Clerk.

Local Board of Health Offices, 13, Prince-street,
14th May, 1863.

TO BUILDERS and CONTRACTORS.—Parties willing to TENDER for the ERECTION of a NEW CHURCH at Blackheath, Kent, may see the plans and specification on and after JUNE 18th, at the Offices of Messrs. MAYHEW & CALDER, 7, Clement's-inn, Strand, Offices, Saturdays, Both Tenders directed "To the Committee of the New Wesleyan Church, Blackheath," to be sent to J. B. INGLE, Esq. 2 the Grove, Belmont Hill, S.E. on or before the 29th JUNE. Quantities are taken out, and can be obtained for 1l. each copy. Neither the lowest nor any other Tender will necessarily be accepted

JAMES WILSON, F.S.A. Architect.
1, Belmont, Bath.

TO PAVIORS and OTHERS.—The Commissioners of Sewers of the City of London will meet in the Guildhall, of the said City on TUESDAY, the 30th of JUNE, 1863, at HALF-PAST TWELVE o'clock precisely, to receive TENDERS for RELAYING the CARRIAGEWAY PAVEMENT on the south, the east, and west sides of St. Paul's Churchyard, agreeably to a specification which may be seen at this Office. Persons tendering are required to give the names and addresses of at least two substantial householders as their sureties to enter into bond with the contractor for the due performance of the contract. The Commissioners do not pledge themselves to accept the lowest Tender, or any, unless deemed satisfactory, and no Tender will be received after TWELVE o'clock on the day of treaty.

JOSEPH DAW, Principal Clerk.

Sewers Office, Guildhall, June 16, 1863.

TO CONTRACTORS, GAS ENGINEERS, and BUILDERS.—TENDERS are required by the Portland Gas Company for the CONSTRUCTION and ERECTION of GASWORKS at Portland, Dorset, near the Victoria Lodge Inn, consisting of Retort House, Gasholder and Tank, Stores, Workshop, Office, Foreman's House, &c. Tenders may be given separately for the performance of the following works:—To provide all labour and materials for the erection of the several buildings, construction of tank, wells, setting retorts, &c and to paint the same with three coats of paint, and one of primer. To provide and fix the whole of the ironwork properly belonging to the gas engineer. Tenders to be given for laying pipes from Gasworks to the town of Chiswell, and therein, as required, at per yard lineal; and also for services of iron from mains to consumers' houses. The Tenders are to be sent in, or or before the 1st of JULY, 1863, to R. N. HOWARD, Esq. Solicitor, East-street, Weymouth, sealed, and marked "Tenders for Portland Gasworks," or "Buildings," or "Ironwork," as the case may be, at whose Office the plans and specifications can be examined. Any information respecting the same can be obtained of Mr R. N. HOWARD, or of Mr. ROBERT BENNETT, Architect and Surveyor, Portland-place, Weymouth. The Company do not bind themselves to accept the lowest or any Tender. Power to invite Tenders in detail, parts to be settled by Architect, or according to scheduled prices or contract price.

R. N. HOWARD, Solicitor.

Dated, Weymouth, June 12, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

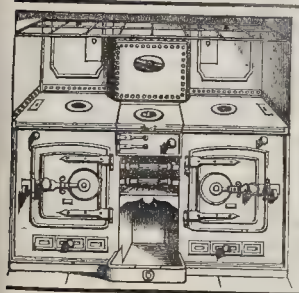
PATENT ENAMELLED TOP PLATE MANGER, WITH RACK AND WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

THE PATENT HARNESS FITTINGS



Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

ILLUSTRATED LISTS ON APPLICATION TO

ST. PANCRAS IRON WORK COMPANY.

OLD SAINT PANCRAS ROAD, LONDON, N.W.

FENDERS, STOVES, FIRE-IRONS, AND CHIMNEY-PIECES.

DEVAUX'S VIEILLE MONTAGNE

THICK ROOFING ZINC.

This invaluable metal, if laid by Mr. TYLER on the new principle introduced by J. RENNISON, Esq. F.I.B.A. will last as long as lead, at one-third the cost.

For Prospectuses, Samples, Models, and Estimates of Works to be done with the Roofing Zinc, in large or small quantities, in Town or Country, apply to

Mr. J. W. TYLER, OFFICE—12, ABINGDON ST.; WORKS, 4, WOOD-ST. WESTMINSTER, S.W.

If the Metal is laid by Mr. TYLER, who has become so well known among Architects and Builders, superior and careful workmanship may be depended upon, and a guarantee given for its durability, if the woodwork is prepared according to directions given.

HANDSOME BRASS and IRON BEDSTEADS.—HEAL & SON'S Show Rooms contain a large assortment of Brass Bedsteads, suitable both for Home use and for Tropical climates, Iron-and-Brass Bedsteads, with Brass Mountings, and elegantly ornamented Pearl Iron Bedsteads for Servants, every description of Wood Bedstead that is manufactured, in Mahogany, Birch, Walnut-tree Woods, Polished Deal and Japanned, all fitted with Bedding and Furnitures complete, as well as every description of Bedroom Furniture.

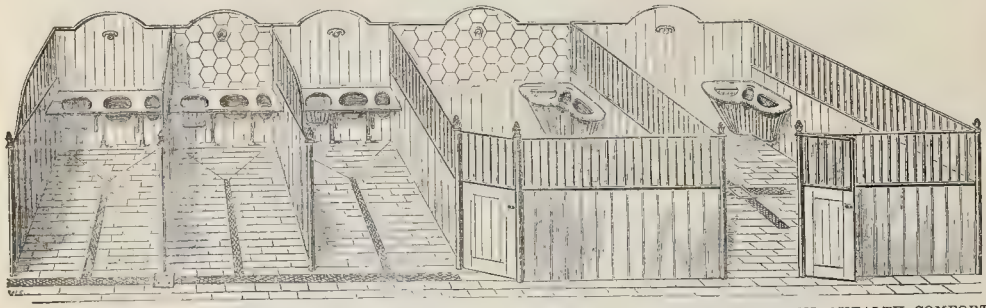
THE PRIZE MEDALS,

LONDON, 1851. PARIS, 1855. LONDON, 1862.

AWARDED TO

COTTAM & COMPANY,

No. 2, WINSLEY-STREET, LONDON, W.



FOR PROGRESSIVE AND GENERAL IMPROVEMENTS IN

STABLE FITTINGS AND HARNESS BRACKETS.

PATENTEES AND ORIGINAL INVENTORS OF

THE IMPROVED SYSTEM OF STABLE AND HARNESS FITTINGS,

PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS, AS WELL AS BY THE PRINCIPAL NOBILITY, GENTRY, AND HUNTING ESTABLISHMENTS IN THE KINGDOM.

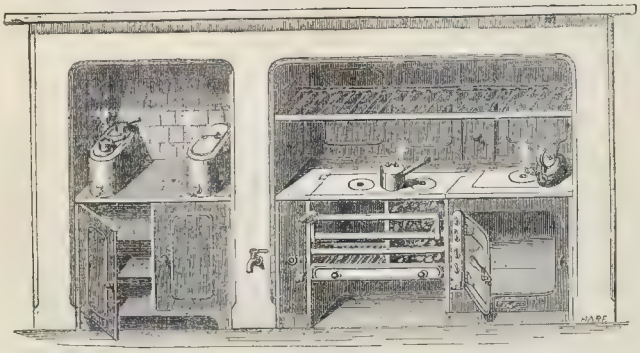
SECURITY FROM ACCIDENT by the use of the Patent Halter Guide and Improved Curved Top-plate; PROMOTION of HEALTH, COMFORT, and CONDITION, by the cleanliness and power of resisting infection of the Mangers and Troughs; and also of the Patent Drop Cover, to curtail the quantity of water to be imbibed. ECONOMY in the USE of FOOD, from the improved formation of the Fittings, and by means of the Patent Portable Seed-box, are some of the peculiar recommendations of Cottam's Patent Componised, Enamelled, and Galvanized Iron Fittings for Stalls and Loose Boxes.

COTTAM'S PATENT COMBINED SADDLE and HARNESS BRACKETS; IMPROVED SURFACE GUTTER, WITH MOVEABLE SAFETY COVERS; Sanitary Traps, Cheap and Durable Corn-bins, and every Article requisite for the Stable and Harness-room.

IRON GATES, FENCING, and HURDLES MADE by MACHINERY.

COTTAM'S newly-invented REGISTERED NOISELESS MANGER SHACKLE and GUIDE FOR HALTER-STRAP, and IMPROVED VENTILATING HARNESS BRACKETS, are only to be obtained from the Inventors, and can be seen in use at their Manufactory.

COTTAM & CO. exhibit for inspection, at their Iron Works, 2, Winsley-street, W., an extensive range of full-sized Stalls, Loose Boxes, and Harness Rooms, the most complete that can be imagined.



ILLUSTRATED CATALOGUES and LITHOGRAPHS free, on application to COTTAM and CO. 2, WINSLEY STREET, Oxford-street, London, W.

COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.

N.B. WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

CUNDY'S

PATENT BRICK OVEN WINDING CHECK SEMI-CLOSE KITCHEN RANGE.

This Range will be found very superior to the close Range now in use, inasmuch as it combines the cleanliness of a close kitchener with the perfect ventilation of an open range.

The fall-down bar will be found useful for broiling purposes when the fire is low.

The Ventilator in the Oven Chimney, and also the Register, can be kept open without diminishing the efficiency of the range, thereby entirely removing the great objection and discomfort of all other close ranges, namely, the sulphurous and excessive heat in the kitchen, and the smell of cooking all over the house.

The great advantage of a brick oven is, that it absorbs the steam given out by bread or meat in the process of baking; consequently the latter is totally free from the disagreeable flavour too evident in meat baked in an iron oven.

As the fire of this range can be diminished or enlarged at pleasure, it can (when not in use for roasting) be wound up within 6 inches of the oven, and still be used for baking, also for boiling upon the hob over the oven, thereby effecting a considerable saving of coals.

THIS RANGE,—ALSO CUNDY'S PATENT BRICK OVEN DOUBLE FALL-DOWN BAR KITCHEN RANGE, and CUNDY'S PATENT COTTAGER'S KITCHENER,—can be seen in operation at the Show Rooms of THE MANUFACTURER,

WILLIAM ADDIS,

WHOLESALE AND RETAIL IRONMONGER, AND STOVE, GRATE, AND RANGE MANUFACTURER,

6, 7, and 15, LEICESTER STREET, LEICESTER SQUARE,

Where Mr. CUNDY can be gratuitously consulted, personally, or by letter, relative to the cure of Smoky Chimneys.

SMITH'S PATENT DOOR SPRINGS FOR SWING DOORS,

So universally known as to need no description; but to prevent the substitution of spurious imitations, it is necessary to see that the

ADDRESS, PRINCES STREET, HAYMARKET,

is STAMPED THEREON, such only being genuine and warranted by the Maker.

SMITH'S PATENT WEATHERTIGHT CASEMENT FASTENING,

Immeasurably superior to the Espagniolette Bolt, and

SMITH'S PATENT WATER BAR,

Are the only effective means of excluding the weather from French Casements. Approved by all the leading Architects, and applied to all the principal buildings in this country, and on the Continent. Models and Lists of Prices forwarded free on application. Every description of Engine, Machine, Ironwork, Repairs, &c for Builders and Ironmongers

CISTERNS, FROM 30 TO 150 GALLONS,

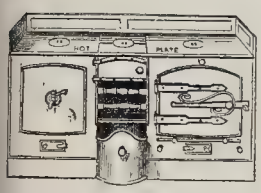
ALWAYS IN STOCK.

Prices delivered in London.

A DISCOUNT TO THE TRADE, BUILDERS, &c.

BROWN & GREEN'S
PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.



These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and the large ones, fitted with Bath and Steam Apparatus, &c. form the most complete appointment for large establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

81, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept 6, 1862.

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.

All Goods delivered free within Five Miles.

The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 1862.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Repemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.
ESTABLISHED 1774.

NOW OPEN, YOUNG'S IRONMONGERY WAREHOUSE,
No. 24, Davies-street, Three Doors from Oxford street.
For the supply of Builders, Carpenters, Upholsterers, Smiths, Bellhangers, and the Trade in general, at wholesale prices. In connection with his Old Establishment, No. 18, Blandford-street, Manchester-square, running out of Baker-street, Portman-square, London, W.

LITTLE CASTERTON FREESTONE.
Apply for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 20, Savile-row, London, and at the Museum of Practical Geology, Jermyn street, W.
This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

RED MANSFIELD STONE,
WHITE MANSFIELD STONE.
YELLOW MAGNESIAN or BOLSOVER LIMESTONE.
Consigned in railway trucks, direct from the Quarries, in blocks not exceeding twelve tons; or worked at the Quarries and delivered free from injury at any railway station.
Mr. ROBERT LINDLEY, Mansfield Quarries, Nottinghamshire.

TISBURY STONE
The WARDOUR (CHILMARK) and TISBURY STONE COMPANY, Limited,
Are prepared to execute orders to any extent for their TISBURY STONE.—This is a close, fine-grained Stone, of a beautiful colour, possessing all the qualities of the best Portland, in which range it is placed geologically.
It will supply the long wanted desideratum of the Architect, Builder, and Sculptor, as the Stone is a first-class Weather Stone, easily worked, and carries a fine arris; and is eminently adapted for carved mouldings, high class architecture, and works of art, requiring only to be known to become the
STONE OF THE DAY.
Specimens, Price, &c. may be obtained of
SAMUEL TRICKETT,
General Stone Merchant, Millbank; or at the Offices of the Company, 3, Adelaide place, London Bridge.

HY. GEORGE & COMPANY,
CAEN and AUBIGNY QUARRYMEN and GENERAL STONE MERCHANTS, CAEN WHARF, ROTHERHITHE, S.E.
Seasoned Caen Stone always in Stock, and a large assortment of Sawn Slabs in Parkspring, Hurdsil, &c. &c.
Grindstones, Hones, Sills, Curbing, Landings, Paving, and all descriptions of Yorkshire Stock. Cargoes shipped direct from the Quarries. Prices and specimens forwarded on application.

BELLMAN & IVEY,
GENERAL AND ORNAMENTAL PLASTERERS,
Manufacturers of
SCAGLIOLA MARBLE
and
SUPERIOR PLASTER OF PARIS.
This Plaster, made expressly for their own business, is of excellent quality, and its extreme lightness in weight ensures a saving of 30 per cent. in use, from its covering one-third more superficies than the general plaster.
PRIZE MEDALS
were awarded Messrs. Bellman & Ivey for their Works at the Exhibition of 1851, and again in 1862.
PLASTER WORKS, 3, BEDFORD STREET, LIQUORPOND STREET, LONDON, E.C.
SHOW ROOMS AND OFFICE,

FOR PRICES, SEE LAST WEEK'S ADVERTISEMENT.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.

By Her Majesty's  Royal Letters Patent.

F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,
Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronized by
HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY.
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's Show in Battersea Park. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a bad conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only One PENNY PER SQUARE FOOT. Pamphlets, with full directions as to its use and the mode of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, sent free to any part of the town or country. DRY HAIR FELT, for covering Rolls &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully invited to send their orders DIRECT to the FACTORY, as the surest means of being supplied with a good article, and in lengths best suited to their roofs. The original works were the above roofing in the Royal Botanical Gardens, Regent's Park, factories, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the CAMPS at ALDERSHOTT, CURRAGH, SHORNCLIFFE, and COLCHESTER, upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

THE HAND-BOOK of SPECIFICATIONS; or, Practical Guide to the Architect, Engineer, Surveyor, Contractor, Builder, &c. in drawing up Specifications and Contracts for Works and Construction. Illustrated by precedents of buildings executed by several architects and engineers; the whole arranged by Professor DONALDSON, assisted by the Law of Contracts, showing the responsibilities of architects, engineers, &c. &c.
By W. C. GLEN, Barrister.
In 2 vols. above 1,100 pages, 4*l.*
ATCHLEY & CO. 106, Great Russell street, London, W.C.

THE "OIL and COLOURMAN" (weekly) is of great value to ALL ENGAGED IN TRADE.
ONE PENNY
HENRY VICKERS, Strand; and all News Agents.

LEIGHTON, SON, & HODGE beg to intimate to Publishers, Printers, and the Public generally, that they execute in the best style and on the most moderate terms every description of WHOLESALE BOOKBINDING, either in Cloth or Leather (also Account book Binding), with promptitude and punctuality. Their stock of ENGRAVED BRASS DIES is most extensive, varied, and designed in the best taste, and their powerful machinery and steam power give them great advantages in the rapid execution of large orders.
Apprentices for estimates will meet with prompt attention.
LONDON: 13, SHOE LANE, E.C.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter from SIR RAYMOND CARVIS, Bart. VENTNOR, ISLE of WIGHT.—Second Testimonial.—March 10th, 1858.—In reply to your letter received this morning respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

The Builder.

VOL. XXI.—No. 1063.

The Pantheon of Rome.

HE disencumbrance of the Pantheon from unsightly modern buildings around its circular walls, is one of the judiciously ordered works of the present Pontificate, but, as yet, far from carried out to the extent requisite; the greater part of the rotunda, and the whole of its rear being still obstructed by houses of the meanest description. These works, in 1854, led to the discovery of an interesting and yet quite unknown feature,—a portico, as it appears, flanking at the eastern side the principal front still so imposingly complete; though what is now uncovered consists merely of marble pavement, at a level much lower than that of the great portico preserved entire, with a rectilinear basement projecting below the segment of the circle on the east, in the best style of lateritial brickwork, pierced at regular intervals by quadrate niches, probably for sculptures, but of what original altitude cannot be determined, the upper part of this whole substructure being ruinous. Above rises the first story of the rotunda to the height of nearly 40 feet, surmounted by a cornice in several courses of simple moulding. Above this is another story, about 30 feet high, surrounded by constructive arches of different spans, the wider and narrower in symmetric alternation. The cornice to this story is formed of consoles above a triple string-course of moulding; highest rises another story of less altitude, but strengthened by the same system of constructive arches; and the cornice of this, immediately under the cupola, resembles the lower with consoles and moulding,—the whole in the finest and still perfectly compact brickwork. This temple is the most remarkable example of what ecclesiastic rule has done to preserve, but also to disfigure, the monuments of Paganism in Rome. Association and antithesis impart a special interest to Christian rites within its walls; yet it is, of all this city's churches, one of the least frequented, and one of those in which the celebrations of the ritual year pass through their cycle with least splendour or attractiveness. A forlorn neglect seems to overshadow the edifice and its purlieus; its magnificent portico is ill-kept and squalid-looking; the pavement, where antique, dilapidated, and for the most part ill-restored in brickwork. An effort of the imagination is required to transform for the mind's eye, the actual church of S. Maria ad Martyres into the temple dedicated to all gods under Augustus. Instead of being, as now, disadvantageously looked down upon from the upper, and little raised above the lower level of a sloping piazza, it was approached by five steps, whose elevation is almost buried, but one being fully and another partially uncovered. The tympanum of the frontispiece was adorned by a bronze relief, now only traceable in the wide blackened surface of the cavities of the numerous pivots by which the whole was fastened. On the acroterium at the apex stood the statue of Jupiter hurling thunder-bolts in a chariot, also bronze, and in accordance with the supposed subject of the relief below, Jupiter fulminating against the rebel giants. On the two lateral acroteria were (it is believed) bronze bulls Tiles of gilt bronze covered the cupola, which were carried away, with the many spoils from this city's noblest buildings, by the imperial robber Constans II., A.D. 663. The brickwork of the rotunda had a coating of stucco, probably ornamented; and along the highest cornice, at the back, are still traces of terra-cotta decoration that may have been further carried out on this surface. In two niches between the four antæ of the pronaos, within the portico, stood the statues of Augustus and Agrippa, now lost beyond recovery. Of the majestic colonnades dividing this portico into three naves, with sixteen shafts of red or grey granite, with Corinthian capitals and basements in white marble, are preserved thirteen columns, the shafts above 56 palms high, with three restored, also antique and of red granite, though brought from another building, the capitals and basements modern, in travertine; and above these columns, at the portico's eastern end, the travertine architrave and cornice are also new. In the interior are fifteen Catholic altars, six of which stand within pillared ædiculæ, once occupied by images of gods. The large tribune opposite the entrance, now serving for choir and high altar, was the Pagan sanctuary where incense burnt before the statue of Jupiter Ultor. Before six lateral apses occupied by other modern altars, still stand the superb fluted columns, with corresponding pilasters (shafts 32 feet high), the greater number of giallo-antico, the rest of Phrygian paonazzetto, tinted yellow to resemble the hue of that Numidian marble. The attic is entirely despoiled of its incrustation of finest coloured marbles and porphyry pilasters; the fourteen windows once opening on its circuit are now walled up; and the vast concave of the coffered dome is now a surface of cold whitewash, instead of being incrusted with gilt bronze and silver laminæ,—a decoration which one of Rome's modern writers vaguely states to have perished "through the ignorance of past times."

The dedication of the Pantheon was celebrated by Agrippa, amidst other pomps, on occasion of his marriage with the unworthy daughter of Augustus. In the sequel to successive disasters from lightning, that most injurious to the building in the time of Trajan, this temple was restored by Adrian, Antoninus Pius, Septimus Severus, and Antoninus Caracalla; on occasion of the repairs by which last emperors, it is supposed, were raised the porphyry columns before the six ædiculæ, in lieu of the marble caryatides (sculptures mentioned by Pliny among the ornaments of this interior) that formerly supported their pediments.* After the restoration by Adrian, that emperor gave the edifice the yet new character of a basilica, where he occasionally administered justice. Conformably to which appropriation, it is conjectured, were then added pilasters along the attics, for the sake of resemblance to the similar number in other such imperial basilicas (*vide* Canina, *Architet. Rom.*, p. I, c. 4). The record of the restorations by Septimius and his son is preserved on the architrave, with date answering to 202 of our era, telling that,—PANTHEVM VETVSTATE CORRVPTVM CVM OMNI CVLTV RESTITVERVNT. But this, from below, is entirely illegible; and the only epigraph still quite distinct, as we stand on the piazza, is the original one, in very large letters, on the frieze: M. AGRIPPA L. F. COS. TERTIVM FECIT. —the date answering to B.C. 27. The originally destined connexion with the Thermæ raised by the same signal benefactor of Rome, and son-in-law of Augustus, is still evident from existing ruins, most conspicuous among which is the remnant, for the best part concealed by paltry houses in a narrow street, of *another* great rotunda, with cupola and central orifice for light, popularly called *Arco di Ciambella*, from the form of the bronze decoration,—a circlet binding that orifice,—discovered long ago in the vicinity, and whimsically compared to a ring-shaped sweet biscuit (*ciambella*), of which the Romans are fond; besides which remains is another considerable pile of brickwork, left by those Thermæ, behind the *Accademia Ecclesiastica* on the piazza "della Minerva," best seen from a diverging street,—*Via di S. Chiara*,—but also neglected and obscured. In Piranesi's drawings, engraved 1756, we see the principal mass of these ruins, not merely in the semicircle of a great hall, but also two adjacent stories of Doric arcades, the upper lighted by square windows between the arches, all which has since been suffered to perish.

The Christian dedication of the Pantheon was in the year 608, effected by Pope Boniface IV., with permission, then requisite for such proceedings even to the already powerful Roman bishops, from the Emperor Phocas. From the year 399 it had remained shut, in consequence of the decree of Honorius and Arcadius, requiring all the temples of Pagan worship to be closed; another decree, of the same year, enjoining that such edifices, though unused, should still be preserved entire, having saved this most illustrious one from the fate which eventually struck down in irreparable ruin other magnificent fanes of Rome—as Aurelian's temple to the Sun, demolished in the sixth century, and Adrian's to Venus and Rome, in the seventh century. Originally dedicated to Jupiter Ultor, Mars, and Cybele, the Christianized Pantheon was first consecrated to the Supreme Being, the Virgin Mary, and all Martyrs; but again, in 834, dedicated anew by Gregory IV. to All Saints, on which occasion, it is said, was instituted the festival for the Church's universal observance on the 1st November, that for centuries continued to attract multitudes of pilgrims to the celebrations in *S. Maria ad Martyres*, a plenary indulgence being then accorded by the Popes. The church now became a basilica, where the pontiffs attended for the solemn *cappella* at Pentecost, and during a sermon preached before them on the mystery of that day's commemoration, showers of roses rained down from the cupola upon the antique pavement of marble, porphyry, and granite, still, though much broken, preserved in its principal material.

The injuries and alterations suffered by this classic building form not the least strange details in its singular history. Popes of the seventh and eighth centuries did much for its repair, in no way so effectually as through the supply of a leaden covering for its demolished cupola by Gregory III. In 1153, Anastasius IV. built a papal palace contiguous to it; but, in the two following centuries, the conditions of the Pantheon seem to have reached the very zero of desolation and disfigurement. The accumulation of soil had necessitated the construction of steps to descend *into* its portico from the piazza; shops and paltry houses rose between the columns; a ponderous belfry was built upon the cupola, or (more probably) on the flat roof of the atrium. After the return of the Papal Court from Avignon began the period of restorations, first of which attempted, for this edifice, was the renewal of the cupola-leads by Martin V.; next, the clearing of its colonnades from those vile encumbrances by Eugenius IV. (see the contemporary account by Flavio Biondo). During the works for this last purpose was found the superb urn of porphyry, long ignorantly supposed the sarcophagus of Agrippa, which, now forms the tomb of Clement XII. in the Corsini Chapel at the Lateran; and then were also disinterred fragments of a bronze chariot-wheel, a horse's foot, and a bronze head, supposed that of Agrippa from the colossal statue

* The work of Diogenes, an Athenian; and one of these statues is supposed to be extant in the *Braccio Nuovo* of the Vatican Museum. So conjectures Nibby; but in the official catalogue the caryatide there is said to be from the group sustaining the portico of the Pandrosia Temple at Athens.

in the portico. Even *after* the judicious attempt, under Pope Eugenius, to reintegrate the beauty of the edifice, its colonnades again became encumbered by booths and houses, which were removed in 1525, as both Flaminius Vacca and Fulvio bear witness; and a *third* time, as shown in an engraving of the early years in the seventeenth century, was it necessary to clear this noble portico of similar defilements, effected when the traffic on the piazza was suppressed by Paul V. Urban VIII. replaced the column wanting at the eastern side; and the two others lost, at the same side, were supplied by Alexander VIII., in 1662, not indeed with the antique, but with correspondent granite shafts found in excavations near the French church, S. Luigi, in this neighbourhood. Pope Urban spent 15,000 scudi on the Pantheon; threw down the Mediæval belfry, but replaced it by two other structures, veritable specimens of the pepper-box style, whose hideous obtrusiveness is now the great disfigurement to the front view of the classic elevation. Still worse was the spoliation (a well-known story) of the portico, deprived by that pontiff of all the gilt bronze clothing its ceiling, as other parts were, at the same time, robbed of details in the same material, the entire weight, 450 250 lb.,—the nails alone weighing 9,374 lb.,—partly to be employed for Bernini's baldacchino to the high altar of St. Peter's, but (an appropriation less worthy, and under such government surely less becoming) in much the greater amount, no less than 448,286 lb., to be cast into cannons for the S. Angelo Castle! (Torrigio, S. Grotte Vaticane, who tells us that eighty cannons were thus produced). Then did the dauntless Pasquino put forth his famous epigram, "Quod non fecerunt barbari fecerunt Barberini;" but strangest of all is the record read to this day, on tablets at each side of this church's portals, vaunting Pope Urban's achievement as among the *fasti* of his reign! Almost the only ancient bronze-work left is in the lofty portal, whose valves are ornamented in a simple but tasteful style, the nail-heads wrought into rosettes along the borders inclosing panels. It surprises us to find so enlightened a sovereign as Benedict XIV. added to the list of spoilers by his ill-counselled procedure of removing for various church decorations, from the attic of this building its entire incrustation in precious marbles, Laconic, Thessalian, and Phrygian, besides all the porphyry pilasters dividing its windows, with capitals and bases of giallo antico—an irreparable loss, observes Emile Braun, because thus was sacrificed the best extant exemplification of the polychrome system applied by the ancients to architecture. Not contented to fulfil merely the invidious task assigned, the architect on this occasion gave carved frontispieces, of his own inventing, to the pediments of the fourteen niches, once serving for windows, and all of rectilinear form, around this attic!

The chapel of St. Joseph, the most richly (*not* tastefully) adorned among all in this church, is the oratory of a congregation celebrated in Rome's artistic annals, the academy styled "Virtuosi of the Pantheon," founded in 1543, by Desiderio Adjutorio, a canon of the chapter here officiating, who also originated this sanctuary to the academicians' patron saint. Their members publish a competition for prizes, bimestral and biennial, in painting, sculpture, and architecture, the subjects prescribed, and artists of all nations, if professing the Roman Catholic religion, invited to concur. Their body is formed of forty-five residents in Rome,—sculptors, painters, and architects in equal numbers, and thirty correspondents, not including honorary members. The prizes given are, for the bimestral, a silver medal with the portrait of Raffaelle; for the biennial competition, a gold medal with the head of Gregory XVI., under whose patronage this system was restored by the academicians. In the Pantheon, at an angle between the portico and the rotunda, they have a locality for exhibiting the designs of competitors, with an artistic library and collection of their professors' portraits.* The festival of St. Joseph, celebrated under their direction, is the grandest of the religious observances held within the Pantheon's walls.

To appreciate this celebrated building we should ascend its cupola, for which permission must be obtained from an architect in the employ of Government (Martinucci, who obligingly complies, and sends the *custode* with keys). Its circumference exceeds by three palms that of St. Peter's cupola, but the Vatican copy has the advantage by more than thirty palms in height. We reach this classic dome by a staircase in the lateral compartment, appropriated to the Virtuosi, and first make half the circuit of a sloping platform, without parapet, carried round the base of the drum. In front, above the portico roof, we see the remnant of an antique water-channel in bronze, fastened immediately under the eaves by iron rods, but never restored from its present unserviceable state. An epigraph under this tells that, in the year 1808, two artisans measured the height from the pavement to the cornice round the orifice, 202 palms, stated by English writers at 143 feet; height of dome, 71½ feet. The very steep stairs formed in the leads by which we mount to the apex are flanked by a complete chapter of heraldry in the numerous crests with epigraphs upon the leaden surface at each side, recording repairs by popes and cardinals. Two, in the name of Nicholas V., date 1451, around the orifice (diameter 28 feet), are still perfectly entire, the outer rim, of bronze, sloping to a considerable width, on which one may stand or recline, to look down from this indeed dizzy height upon the attic and pavement of the temple, and obtain a glimpse of the inner cornice round that opening, also bronze, in a style of graceful ornamentation, with folial and egg moulding. The view of the city hence is one of the finest, its aërial architecture of towers and domes, and the grand sweep of mountain distances around the Campagna, here impressing as a truly majestic panorama.

During almost every winter the Pantheon becomes inaccessible, and its rites are suspended for some days, owing either to the descent of violent rains through its open roof, or the rising of the Tiber waters on the low ground in front. Amid such circumstances as in the latter case, whilst the stately colonnades are reflected on the dull surface of yellow water, their basements, with steps and pavement, sometimes deeply submerged, this sublime architecture is more striking than under any other effects, except, indeed, the spiritual solemnity of moonlight.

An accessory admired by Byron and Madame de Stael in the Pantheon has been wanting since 1820, when Pius VII. engaged Canova to remove from the oval niches within its circuit the busts of distinguished artists, not only those buried here, but others that had been long accumulating in such honourable location, to be hence transferred to the Capitol, these forming a nucleus to a new museum, the protomotheca of the illustrious in art's several walks, either Italian or whose genius was fostered by Italy. In the original niches, however, five busts still remain, without any epigraphs; and in a sixth is that of Cardinal Rivarola, a benefactor to this church, the illustrious dead reposing in which are numerous, besides the greatest,—Raffaelle,* Pierin del Vaga, Giovanni da Udine, Taddeo Zuccari, Annibale Caracci, Baldassare Peruzzi, and Flaminio Vacca.

The statement that the architect engaged for the invidious task of stripping off all the rich marbles and porphyry from the Pantheon's attics, at the same time added *curving* pediments to the fourteen niches, formerly open windows, cannot, we believe, be confirmed. That he added frontispieces of his own invention is certain; but these features, as we now see, are *triangular;* nor have we any account of their having been altered since the time of Benedict XIV. Fortunately, Piranesi's drawing still gives a faithful representation of this interior as it existed prior to that period (1747), where we see four porphyry pilasters, with giallo-antico bases and capitals, between each window. To supply the place of that antique decoration, the attics were then painted on stucco, and a series of quadrate panels introduced between the niches, with a wretched attempt to imitate coloured marbles. In four of those recesses were placed large figures of saints, tinted in chiaroscuro, on flat boards, to *represent* sculpture—one among several details in the worst possible taste that disfigure the interior of this noble building. In one of the internal niches of the portico, once occupied by colossal statues, is a coarsely-executed figure, in painted wood, of the "Dead Christ." The pictures and statuary over the altars are rather below mediocrity. Over one is an antique coffer, inside a glass case, for a hundred years the depository of the *Volto Santo* (handkerchief of St. Veronica), placed here by Boniface IV., it is said, when the Pantheon was first consecrated to Christian rites; thence removed to S. Spirito, and eventually to St. Peter's; being, in all probability, an early picture of the ascetic Byzantine school. The present high altar, rich in marbles, was raised by Clement XI., in lieu of the Mediæval one that stood, with an inclosed choir and baldacchino, more in advance of the apse, towards the centre of the area. Four porphyry columns had been taken from the antique ædiculæ to support that altar's canopy; and when the Mediæval chancel was swept away, no canopy being wanted for the new altar, those columns were not replaced, as good taste would have suggested, but set aside, two were eventually sold for unknown destination, the others at last brought to the Vatican library, by order of Pius VI.; their places in the ædiculæ being still occupied by columns of grey granite. Though so much of neglect and disfigurement is to be charged against Mediæval Rome in the story of this building, a high sense of its importance is indicated in the official oath taken by senators to popes in the twelfth century (quoted by Mabillon from Cencius Camerarius), pledging themselves to support the pontiff, to defend and secure (or *recover*) St. Peter's, the City of Rome, the Leonine City, the Castle of Crescentius (St. Angelo), the Senate, the Mint, and S. Maria Rotonda. This church appears under a striking and novel aspect when the only attractive religious rites, as directed by the Academy of Virtuosi, are held here for the feast of their patron, St. Joseph; and on the 26th of April last we attended those ceremonies, the area of the majestic circle being now filled with people, troops on duty with helmets glittering in the sun, the cupola resounding to strains of triumphant music from a full orchestra, the light softened by an awning stretched across its central orifice; and for this occasion, we were glad to observe, no meretricious decorations had been admitted to conceal architecture by swathings or hangings, as done to an offensive degree at high festivals in other Roman churches.

It is traditionary that Michelangelo ascribed the portico and body of the rotunda to Agrippa, the first story of the interior to Adrian, and the attics, or entire upper story of the Pantheon, to Septimius Severus.

---

* The *idea* of this institution has been attributed to Raffaelle; the artists of his school may be said to have founded it, and chosen the above-named canon of this church for their president, or rather patron.

* The discovery of Raffaelle's remains through the exertions of the Virtuosi Academicians, and the reinterment (or rather immuring) after exposure for eight days to multitudes of spectators, in September, 1833, are sufficiently well known. Both the original cenotaph, with a Latin distich by Bembo, and another recording this second funeral, are set into the walls near the Madonna statue, over an altar, Raffaelle's gift, and beneath which he desired to repose.

TWICE BURIED.

IN connexion with the proposition to remove the remains of Shakspeare, some notes suggest themselves.

Burial is generally spoken of as the "last office" we can perform for the dead; but in turning over the pages of English history we come to the names of so many persons who have been twice buried that this expression would almost appear to need qualification. In our own time we have seen the remains of Napoleon exhumed from their resting-place in St. Helena, and conveyed with all the honours of a full naval escort to his beloved France, and there entombed beneath the grand Dome des Invalides, by his nephew, the present Emperor. Madame Mere, propped up with pillows on her crimson damask couch and breathing her last, with her mind full of tender memories of her dead son and visions of the future renewal of the dignities of his family, could scarcely have foreshadowed a more brilliant and solemn ceremonial than that with which this tribute was paid.

The gallant Hotspur was twice buried. After the battle of Shrewsbury his body was interred at Whitchurch by Lord Furnival. The victor, however, had it torn out of the grave and placed between two mill-stones close to the pillory at Shrewsbury. It was then beheaded, drawn, and quartered. The head was sent to York; the quarters to London, Chester, and Newcastle; the fourth being retained at Shrewsbury. Nearly four months after the battle, on the 3rd November, 1403, Henry yielded to the solicitations of Hotspur's widow, and issued writs authorizing the mayors and sheriffs of these towns to deliver up to her the respective portions they held in charge, for burial. The writs for the delivery of the head of the gallant knight was made out in the following form:—

"The King to the mayor and sheriffs of the city of York, greeting. Whereas of our special grace we have granted to our cousin Elizabeth, who was the wife of Henry de Percy, chevalier, the head and quarters of the same Henry, to be buried: we command you that the head aforesaid you deliver to the same Elizabeth, to be buried according to our grant aforesaid. Witness the King at Cirencester, the 3rd day of November."

The sorrowing lady, after collecting the remains of her husband, thus cruelly scattered according

to the inexorable fashion of the times, had them interred at York. She was left with one infant son, who, fifty years afterwards, was also slain upon the field of battle.

After James I. was firmly seated upon the English throne he resolved that the remains of his mother, the beautiful Mary, Queen of Scots, should be placed side by side with those of other monarchs in Westminster Abbey. Accordingly, in the ninth year of his reign, they were disinterred, and removed from Peterborough Cathedral for this purpose. The register of All Saints' Church, Huntingdon, has the following entry:—"October, 1612, 6 day. The Queene of Scots' corps brought into this church ye 6 day." Huntingdon is thus shown as one of the places at which the funeral procession halted for the night.

Oliver Cromwell, Lord Protector of England, in his lifetime, by the wonderful reverse in his posthumous fortunes, was adjudged a traitor immediately after his death, and his mortal remains, which had been interred with much pomp and ceremony in Westminster Abbey, were exhumed by order of Charles II., and hanged in chains at Tyburn. After this indignity they were buried under the gallows. They are said to have been secretly taken up, and more recently interred in the centre of Red Lion-square. His son-in-law, Ireton, who died in Ireland, but whose body had been brought to England and buried in Westminster Abbey, was also twice buried; for, as is well known, his body, with that of Bradshaw, was likewise suspended at the gallows, and thrown into the same pit that received Cromwell's.

The history of the incorruptible body of St. Cuthbert is another case in point. It was buried in A.D. 686, in the island of Lindisfarne, then frequently threatened by the Danes. On his death-bed St. Cuthbert is believed to have charged the monks of the priory not to leave his remains to be desecrated by the Danes, should they actually land. Nearly two hundred years after this event they made an incursion, and put the monks to flight, who, mindful of the traditional promise of their predecessors to their dead bishop, took his remains with them. From time to time they appear to have inspected the body, which, to their great awe, wonderment, and delight, never presented the least symptoms of decay. They wandered about with it for many years, finally settling at Chester-le-Street. About the time of the Norman Conquest the monks then in charge of it resolved to return to Lindisfarne, and set out in a body for this purpose. On their road thither they received an indication from the ark in which the dead saint was carried, that he wished to remain where he was then deposited. This happened to be at Durham. A temporary shelter made of branches was improvised, and the saint placed within it, whilst a church was immediately commenced for his ultimate reception. Seventy-six years after the completion of this edifice, called White Church, William de Carilepho brought home from Normandy improved views of the capabilities of architecture, and set about building the superb cathedral church which still crowns the rocky banks of the Wear. The remains of St. Cuthbert were placed in the new building, in a shrine made of costly marble and glittering with gold. From this period down to the Reformation it was visited by kings, nobles, and crowds, who presented so many offerings that the shrine became the richest in the kingdom. We now come to the most remarkable facts connected with St. Cuthbert's history. The commissioners sent down to Durham by Henry VIII. opened his shrine and examined the saint. We may conclude that they would have been glad to detect any imposture; but they added their testimony to the incorruptness of the body. They averred that his "carkas" was perfect with the exception of the tip of his nose. After taking the jewelled vessels and ornaments from the oak chest in which the body reposed, they buried St. Cuthbert beneath the spot on which his shrine had stood. But this was not his final burial. In May, 1827, some repairs were needed near the site of the once gorgeous shrine, and the workmen employed to effect them opened the vault in which Henry's commissioners had deposited the saint's remains. There lay within it an oak chest, the lid and part of the sides of which had fallen in. We quote now from a local newspaper paragraph of that date. "When the mass of powdered wood was taken away, an entire skeleton was found, swathed in vestments of linen and silk, which were also much decayed: a portion, however, of the robes was still remaining, richly worked in silk and gold tissue, and containing some valuable *dates*. At the lower part of the chest or coffin were laid several detached bones, two full-grown skeletons, and the cranium of a child. A small square tablet of wood, covered with a thin lamina of metal, was placed upon the body. There were also found in the coffin the fragments of an ivory comb of large dimensions, and a small silver cross; but no crucifix, crosier, ring, or any other article of value. These antique relics, after being inspected by several gentlemen, were carefully collected and replaced in the vault, which was afterwards closed, and the alterations intended to be made in that part of the cathedral suspended."

This was, perhaps, all that took place before the workmen who opened the vault. But a more critical examination must have been made. For, close to the glazed compartment in Durham library, containing the illuminated missals it cost the monks of old so much care to write, is a flat glass case, similar to those under which conchological and entomological specimens are placed in museums: in this case, neatly folded, are the robes of the saint, the cross, and the comb. The last has a thread or two of gold wire intertwined about it. St. Cuthbert—rigid ascetic that he was in his hermit life—was buried for the third time stripped of his robes: it is a popular fancy that only three persons know where. On the death of either of these the secret is imparted to a new confidant to make up the trio.

These are a few of the most prominent instances on record of the transportation of the remains of dead persons for reburial. The treatment of the body of the accomplished Scottish monarch James IV., after his death on Flodden field, should be mentioned among these notes. After the battle it was identified by Lord Dacre as it lay pierced with arrows, the neck exhibiting a fearful gash, and the left hand being nearly severed from the arm in two places. A contemporary chronicler says it was first removed to Berwick, where "the bodye was bowelled, embawned, and cered, and secretlye, amongst other stuffe, conveyed to Newcastell;" whence, after quiet was restored, the victorious Surrey returned to court, with "the dead bodye of the Scottish king, and brought it to Richmond," as a present to Queen Catherine. But trustworthy Stowe gives the following curious particulars of its ultimate fate:—

"After the battle, the bodie of the same king being found, was closed in lead, and conveyed thence to London, and to the monastery of Sheyne, in Surrey, where it remained for a time, in what order I am not certain, but since the dissolution of that house, in the reygne of Edward VI., Henry Graye, Duke of Suffolk, being lodged and keeping house there, I have been showed the same bodie so lapped in lead, close to the head and bodie, thrown into a waste room amongst the old timber, lead, and other rubble. Since the which time workmen for their foolish pleasure hewed off his head; and Launcelot Young, master glazier to Queen Elizabeth, feeling a sweet savour to come from thence, and seeing this same dried from all moisture, and yet the form remaining, with the hair of the head and beard red, brought it to London, to his house in Wood-street, where for a time he kept it for its sweetness, but in the end caused the sexton of that church (St. Michael's, Wood-street), to bury it amongst other bones taken out of their chauncell." What became of the body, thus decapitated after death, there is no evidence to show. We have word of more unburied heads. The widow of Sir Walter Raleigh preserved his head in a casket to the day of her death; and after this it was as reverently preserved by his son. The daughter of Sir Thomas More conserved the head of her father in a like manner.

In the days of the Crusaders several pious nobles directed that their hearts should be buried in the Holy Land. The heart of Edward I. was buried in Palestine. Conversely, one of the ancient Percies, dying in the Holy Land, desired that his heart should be carried to Whitby Abbey, and there interred. Richard Cœur-de-Lion bequeathed his heart to the citizens of Rouen: it was buried in their cathedral. But the most curious facts connected with the *post-mortem* treatment of this organ in the Middle Ages are to be found in French history. The proud Chatelain de Courcy, unfortunately enamoured of another noble's wife, died on his passage homewards from the Holy Land, where he had been dangerously wounded. He charged his squire to embalm his heart and carry it to the lady of his love. The husband of the fair one, however, intercepted the squire on his errand, and obtained possession of the heart, which he ordered his cook to dress and serve up. When his lady had eaten it, he grimly told her it was the heart of her lover. She sickened and died. This was not a solitary case. Raimond de Chateau Roussillon cut off the head of a troubadour who had written songs in praise of his lady, and tore out his heart with his own hand. After having it cooked, and seen that his wife had eaten it, he asked, "Do you know that meat, Madam?" She replied that she did not, but that she had found it exceedingly good. Upon which he held up to her affrighted gaze the bleeding head of the poet. Rendered valiant by fear, she declared it should be the last morsel she would ever eat; and, as her husband advanced towards her, sword in hand, she threw herself from a balcony and was killed by the fall.

As there are several persons who have been twice buried, so there are many that have not been buried at all;—the lady in the College of Surgeons, for instance. The crypt of Ripon church is fantastically lined with bones and skulls arranged with geometrical precision in neat patterns. The church of St. Ursula, in Cologne, is adorned in the same fashion. In the latter edifice the bones are in the church itself in the light of day. They are arranged systematically on shelves which line the walls. The shelves and partitions are screened with floriated tracery, of great diversity of design, every compartment exhibiting a variety. These bones are declared to be those of eleven thousand martyred virgins who perished with St. Ursula!

Farther up the Rhine, there is a church, near Bonn, where, in a vault into which visitors are shown—after they have viewed, in due order of sight-seeing, a certain staircase said to have been the property of Pontius Pilate—there are seen arranged in two rows, with a pathway up the middle, twenty-five lidless coffins, each containing the brown, dry, shrivelled, leathery body of a monk in his habit and cowl. These have lain there, according to the guide, for 400 years.

In the caves of the Capuchins, of Palermo, the dead, hanging by hooks to the walls, and otherwise arranged in cases along galleries for convenience of inspection by mourners and sight-seers, can hardly be said to be buried. All are dressed in good clothing, according to their condition of life, of the fashion of the period at which they, severally, died; some in evening dress, patent leather boots, and kid gloves; young ladies in silks and satins, with wreaths upon their heads; monks in their habits, &c. They are carefully attended to, neatly arranged, dusted, and labelled by the Capuchin brethren, who are the guardians of the place. Their fee for these posthumous services is about 4*d*. They have a mode of preserving a life-like appearance in the dead by washing the body with a solution, and by fixing glass eyes in the sockets; but this is an extra of very considerable expense, and not frequently incurred by the friends of the departed. It may have been to some such process that St. Cuthbert was indebted for a celebrity of 1,200 years' duration.

We have two more notes concerning the royal dead. The first concerns William the Conqueror. The commotion that ensued upon his death is well known. The corpse lay upon the ground for three hours almost in a state of nudity, quite disregarded; his nobles, knights, and servants all bent upon securing their own interests. When order was restored, and the interment about to take place, a voice from the crowd threw the multitude into consternation: it said—"He whom you have praised was a robber. The very land on which you stand was mine. By violence he took it from my father; and, in the name of God, I forbid you to bury him in it." The man was called aside, and paid 60*s*. for the grave, and promised the full price of the land. The king was then buried in a stone coffin. According to Baker, when Coligni took possession of Caen the tomb was broken open by his soldiers, and some of the bones of the departed monarch were brought to England, 1562. Curiously, Coligni was not allowed to rest in his grave like other people. Catherine de Medici caused his head to be embalmed, and sent it to Rome.

Our second note is a passage from the diary of Mrs. Godolphin, the beautiful and pious friend of Evelyn, and ancestress of the ducal house of Leeds: it relates to the Duchess of York, first wife of James II. "The D—— dead, a princess honoured in power, had much witt, much money, much esteeme: she was full of unspeakable tortur, and died (poore creature) in doubt of her religion, without the Sacrament, or divine by her, like a poore wretch; none remembered her after one week, none sorry for her: she was toat and flung about, and every one did what they would with that stately carcase."

CAN OWNERS OF BUILDING-GROUND GIVE UP ROADS TO BE KEPT IN REPAIR BY THE PUBLIC, WITHOUT HAVING PREVIOUSLY SEWERED AND PAVED THE ROADS?

A CASE of considerable importance to the several interests connected with building-ground in the environs of towns, came before the justices of the Queen's Bench, on the 6th of this month. It related to the formation and "dedication" to the public, of a street or way, by the owner of the ground. The object of such dedication of course is to place the *onus* of the reparation of the way upon the public, or its representatives: it is therefore very important that these latter should be able to require that the road be delivered to them in a proper state, or complete in all that is essential to the public health. Streets, or urban ways, it is obvious, may involve as essential, more than might be required in roads in the country. Much difficulty has arisen from the manner in which various Acts for purposes of local government, have been piled upon one another. In the present case ("The Queen on the prosecution of William Bass *v.* The Inhabitants of the Township of Dukinfield,") the conflict was between the jurisdictions established under the General Highway Act, and under the Public Health Act and the Local Government Acts. Several points apparently are still left in an uncertain state; but the case between the parties in Dukinfield having been decided, the matter has appeared important enough for us to avail ourselves of the short-hand writer's notes of the judgment, and of our own notes of the arguments, with a view to laying this case in the main, before our readers.

The General Highway Act, without quoting the words, we may say, provides that no road made by any private person shall be deemed to be a highway repairable by the inhabitants, unless it shall have been previously put into good repair to the satisfaction of the surveyor of highways, and of two justices of the peace: moreover, the surveyor is to call a vestry; and if the road be deemed not of sufficient utility to justify expense of repairs, then the party is to be summoned to a special sessions in order that the question may be determined. By the Public Health Act of 1848, the Board of Health of a district are to exercise the surveyorship of highways, and have the power of declaring the way to be a highway repairable out of the rates.

The question was, which of the two jurisdictions should apply where roads or streets are formed on land newly-covered with buildings; that is, whether the owner of the land, or the inhabitants of the town or district generally, are to bear the expense of sewering, paving, and flagging; seeing that under the Highway Act, all that is necessary is to put the road into repair for purposes of traffic, without the sewering, &c.

The whole law in favour of the defendants, was not at first so clear as might be supposed. The inhabitants of the township of Dukinfield, with the exception of parts under a different Act, and except so far as they may be affected by the Public Health Act, are liable by ancient usage, to repair their roads. In 1853, the road in question was commenced by the landowner, Mr. Astley; and it was completed in 1854, being macadamized, and was used by the public. In May, 1858, the landowner gave notice to the Dukinfield Board of Health of the intended dedication. On the 14th of June, the Board wrote that the road not having been sewered, levelled, paved, flagged, and channelled, to their satisfaction, they could not adopt it as a highway. No vestry was called, the reason perhaps being that there was no such body. On the 30th of August, the landowner got two justices to certify the road as a Highway under the General Highway Act: the certificate was afterwards enrolled at quarter sessions; and in April 1859, the Board were informed that after the 18th of October following, the landowner would deem the road to be repairable out of the rates. In June 1859, the Board gave the landowner a counter-notice as to the reparation of the road by him, or threatening the alternative of their doing the work at his expense. The landowner repaired the road up to the date he had named. After that time, it fell into a state of non-repair, until in October 1860, an information was laid against the Board for not repairing the road under the Highway Act. Eventually an indictment issued, which was turned into a special case. Pending the proceedings, the Local Government Act of 1861 was in Parliament; and a memorial of the inhabitants of Dukinfield to the Secretary of State, urging the introduction of a clause repealing the clause in the Highway Act so far as it regarded places under the authority of any local Board of Health, was met by the suggestion that a case should be laid before the court. The question to be decided was, whether there was the conflict between the jurisdictions, or whether by the adoption of the Public Health Act by a district, the clause in the Highway Act as to the dedication and adoption of a private way, is superseded as regards the district.

Mr. Welsby, for the landowner, argued at great length that there were in fact two modes of proceeding. That under the Highway Act, which did not require the sewering, &c., would be always available, unless the position which he described as taken by the Board were correct, and which he contended was not so, that no owner of land could dedicate a way to the public without their permission or assent.

Mr. Mellish, for the defendants, showed that owners of land could not be held in a position to avoid expenses of sewering, paving, &c., where within the districts of Boards of Health. If once the road could be made a highway, the Board would have no means of compelling the owner to sewer it.

In the judgment, Mr. Justice Wightman said that the landowner had treated the case "as if it were strictly under the provisions of the Highway Act, and without reference to the provisions of the Public Health Act;" and that he had supposed he had done everything required by the 23rd section of the Highway Act: he had indeed given notice to the surveyor (the surveyor being the Local Board of Health); and he had obtained the approval of two justices; but he had "not obtained 'the satisfaction' of the surveyor." Now the question in this case was, whether it was "sufficient for him to have complied with the terms of the Highway Act," or whether he was not also bound by the provisions of the Public Health Act. The powers of the Board, as given in the 69th section of the latter Act, were, Mr. Justice Wightman said,—

"'That in case any present or future street, or any part thereof (not being a highway),' which is this case, 'be not sewered, levelled, paved, flagged, and channelled to the satisfaction of the Local Board of Health,' that is, the surveyor of the highway, 'such board may by notice in writing to the respective owners or occupiers of the premises fronting, adjoining, or abutting upon such parts thereof as may require to be sewered, levelled, paved, flagged, or channelled, require them to sewer, level, pave, flag, or channel the same within a time to be specified in such notice.' They have not done that in this case, though they might have done it. Then by the 70th section it is enacted that 'if any present or future street not being a highway at the time when this Act is applied to the district in which it is situate, be sewered, levelled, paved, flagged, and channelled to the satisfaction of the Local Board of Health, the said local board may, if they shall think fit, by notice in writing put up in any part of the street, declare the same to be a highway, and thereupon the same shall become a highway.' It is said, the local board might, if they pleased, have required Mr. Astley to have flagged and channelled and so on, this proposed new street, and if he had not done it, they might have done it themselves and have charged him the expenses, and might if they so pleased have declared it to become a highway; but that is not inconsistent with its having become previously a highway repairable by the parish at large under the provisions of the 23rd section. It appears to me that to that extent, the provisions of the 23rd section of the Highway Act are superseded, and in effect overruled, by the sections to which I have alluded in the Public Health Act, and certainly to this extent, that the road must be made in a substantial manner and to the satisfaction of the surveyor. Now what is meant by 'substantial manner?' 'Substantial manner' no doubt must have relation to the situation of the road and the nature of it. What might be sufficient on a road over a common, might be very insufficient in a public street which is to form part of a district to be entirely covered with houses, as is the case here. It might be that to get it repaired in a substantial manner it was necessary to 'pave' and 'channel' it in the manner provided by the 69th section; and therefore without that, there not being the assent of the surveyor of this being done to his satisfaction, it seems to me the case is not sufficiently complied with by Mr. Astley under the 23rd section, and that enough has not been done to enable him to say this has become a highway, merely by the way being made to the satisfaction of the two justices. It requires also the satisfaction of the surveyor,—that is, the satisfaction of the local board. It is enacted expressly that it must be to their satisfaction; and, therefore, it seems to me the defendant is entitled to our judgment, as the case is not governed by the 23rd section of the Highway Act; and the section of the Highway Act has not been sufficiently complied with to take it out of the provisions of the Public Health Act."

Mr. Justice Blackburn, in expressing concurrence, refrained however from expressing opinion upon many questions that had been started, and which had arisen from the words which the Legislature had thought fit to use. That which was enough to decide the case, was the point mentioned by Mr. Justice Wightman.

"The common law, as we may call it, enabled any man to dedicate the ground which belonged to him, as a highway, to the public; and then the common law followed as a consequence, that it was repairable by the inhabitants of the district, with the liability of repairing the highways within that district."

Upon that, he continued, came the Highway Act, which for the first time puts a provision that no road should become repairable by the parish unless several things had been done, including the substantial formation of the road, of the width required by the Act, by the person proposing to dedicate; and (in the words of Mr. Justice Blackburn) "to the satisfaction of the surveyor of the highways, or any two justices of the peace." Then came the Public Health Act, "which certainly," said the judge, "is worded so as to occasion very considerable difficulty to see how it is to be worked in future." The 68th section transfers streets being or which may become "highways," that is "highways repairable within the district," and vests them in the local board, and enjoins the board to "'cause such streets,' that is, all those that have become highways, 'to be levelled, paved, flagged, channelled, altered, and repaired, as and when occasion may require;' so that the obligation there to repair those that have become highways is this, that having become highways they shall be repairable by the district; and that is cast on the local board," &c. On several points, Mr. Justice Blackburn expressed doubt; but he considered the 23rd section of the Highway Act as binding; he laid stress upon the fact that the road in question was an intended *street* in the popular acceptation of the term, as well as a street within the definition given in the Public Health Act, and said:—

"Then, that being so, before they can call on the surveyor,—before they can make it a highway under the Highway Act (supposing that still to apply),—it is necessary that it should be made in a substantial manner, to the satisfaction of the surveyor, as well as to the satisfaction of two justices."

It was plain, he said, that the Legislature contemplated that before an intended street were made into a highway, it should have been sewered, &c., at the expense of the owner, and to the satisfaction of the local board. The local board might not be bound to see to all this, in every case; but in that of such a street as the present, they had a right to see that it was made as suited to the street of a town. He laid also some stress upon their power to express dissatisfaction, even should they be wrong; though admitting he was not aware if there were any machinery for compelling a just decision by the surveyor. It was clear that such machinery had not been set in motion, in the case then before the court.

Judgment, therefore, was for the defendants.

PROPOSED PURCHASE OF THE EXHIBITION BUILDING.

ON Monday last Lord Palmerston moved the House of Commons in committee of supply for a vote of 67,000*l.*, as part of 120,000*l.* for the purchase of the land at South Kensington on which the buildings occupied by the International Exhibition of 1862 still stand.

His lordship first alluded to the inferiority of London as compared with other first-rate towns in regard to the character of its buildings. The cause, he remarked, was the great value of ground. The improvement between Oxford-street and Holborn cost, in purchase of land only, about 57,000*l.* per acre. The improvement in Charlotte-street cost 67,000*l.* per acre. The land for the improvement between Coventry-street and Long-acre cost 119,000*l.* per acre. When it was proposed to increase the width of the new street between Blackfriars Bridge and the Mansion House from 70 feet to 80 feet, it was found that that addition of 10 feet to the width of the street would involve an additional outlay of 100,000*l.* A few years ago, continued his lordship, there was a vacant space near St. Paul's: I cannot say what fraction of an acre it was; but when the City of London were asked to leave that unoccupied in order to give space around the magnificent Cathedral of St. Paul's, the answer was that that land, small as it was, was worth 60,000*l.*, and that the City did not feel justified in acceding to the proposal. Not only is the price of land in London high, but the same cause operates in provincial towns. In Manchester land is sold by the square yard, and produces about 50,000*l.* per acre, in some places 60,000*l.*, and in certain spots as high as 200,000*l.* At Birmingham, land held by the North Western Railway was sold at from 57,000*l.* to 60,000*l.* per acre. At Liverpool land has been sold at 30*l.* a square yard, or nearly 150,000*l.* per acre; and in other less good parts it fetches 100,000*l.* per acre. I say, then, that the national progress of wealth and civilization tends to add greatly to the value of land covered by buildings in the interior of the town; and, admitting that there are certain requisites for the development

of the public establishments and buildings, the question arises where land for that purpose can be acquired.

Now, we hold that the land held at Kensington by the Commissioners of 1862 does afford the means of providing for our immediate and prospective wants, and that we are able to get land there upon terms infinitely cheaper than those upon which land can be acquired nearer the centre of the town. In the first place, we want a Patent Office and Museum. We think that about three acres would be sufficient. We want an addition to the British Museum. One calculation has been that eight acres would be required: that, probably, is more than would be necessary. Five acres have been named as a near approximation, and three acres are the smallest that immediate wants require. We have collected at some expense and trouble a number of most interesting portraits of distinguished men connected with the history of the country. That collection is very ill-placed; for where it is it cannot be seen; and it is urgently desirable that we should have a better building in which to place that portion of the collection. We have a museum at Kensington full of most interesting and instructive productions, and a committee of the House one or two years ago strongly recommended that an addition should be made to that institution for the purpose of containing more conveniently the things which are there to be found. Suppose that land was to be bought for these purposes in the metropolis at the rate at which land in that situation would probably be acquired, the calculation is as follows:—If eight acres were acquired at the Museum—I do not think that so much would fairly be requisite—the land would cost 390,000*l.*, and the building 824,000*l.*, making a total of 1,214,000*l.* If five acres were sufficient, the land would cost 240,000*l.*, and the buildings 567,000*l.*, making a total of 807,000*l.* And if only three acres were acquired the land would cost 150,000*l.*, and the buildings 300,000*l.*, making a total of 450,000*l.* For the extension of the Patent Museum three acres might perhaps be got for 100,000*l.*, and a suitable building erected thereon for 100,000*l.* The Kensington Museum had been calculated to cost for its extension in 1864, 25,000*l.*, and in 1865, 25,000*l.* The Portrait Gallery would require about half an acre: that would cost 25,000*l.*, and the building to be erected upon it 25,000*l.* Now the proposal we have to make is one which I think the committee will see is very economical. It gives us a greater quantity of land at a far cheaper rate. The arrangement that is proposed is that the public should purchase seventeen acres of land belonging to the commissioners, and covered by the building in which the Exhibition took place. For that land the commissioners are willing to take 120,000*l.*, the cost per acre being about 7,000*l.*, whereas in other parts of the metropolis the cost of land per acre would be 50,000*l.*, 60,000*l.*, or more. Well, in addition to that, there is the existing building; and we think it would be good economy to purchase that building and adapt it to the purposes for which we want accommodation. Sundry people think that we should divide the ground from the building, and let the contractors carry away the building materials.

If the present building were taken away, you would want to build a Patent-office, which would cost 100,000*l.* The enlargement of the British Museum would cost 240,000*l.* You would want an addition to South Kensington, which would cost 40,000*l.*; and you would want to expend 25,000*l.* more, making 405,000*l.* By this plan you have to pay 80,000*l.*, and 286,000*l.* ultimately for alterations, making 366,000*l.* to be set off against 405,000*l.*, leaving a saving of 39,000*l.* or 40,000*l.* This is also to be considered:—When we begin a public building, architects step in: the Institute of Architects also steps in. It is said that plain buildings are not suitable; that ornament is required; stone fronts are reckoned necessary; people say they are not content to have brick covered with cement. We all know that taste is a very dear enjoyment; and, depend upon it, if you set to work,—that ground being clear,—employed a distinguished architect, or called upon a number of distinguished architects to give a plan, you would be running into an expense infinitely greater than we propose; and I don't know but that, on the whole, we shall get a building more creditable to the country and better adapted for the purpose for which we require it. If the House determine, as I trust it will not, that the buildings should not be purchased, the opportunity of buying the land is, I think, one not to be lost. We propose, for the convenience of discussion, to take the votes separately.

A smart discussion followed, in which Mr. Gregory contended that on the plan of making a cheap bargain the Government were going to involve the House in the most useless and reprehensible expenditure. They were going to purchase an enormous building without knowing in the smallest degree what would be the cost of the maintenance of the structure. He objected to the proposal because it would have the effect of drawing into one focus all the different institutions of the country—a principle upon which the House of Commons had more than once protested. He did not wish to see all the institutions of the country coming into the grasp of a clique. He begged to move the rejection of the vote.

The Chancellor of the Exchequer replied to Mr. Gregory, and various other members took part in the discussion.

The result was a majority of 267 to 135 in favour of the Government proposal to purchase the land; and the farther consideration of the question, as regarded the buildings, was postponed.

There can be no question as to the desirability of the purchase of the land at the price given by the Government. The Commissioners' surveyor valued the land at 500*l.* per acre per annum, and we have reason to believe this is not excessive. This amount, capitalized at the rate of thirty years' purchase, represents a total value of 247,500*l.*; or at thirty-one years' purchase (the price already obtained for some of the Commissioners' other land), 255,750*l.* Then there is the value of the refreshment-rooms. The Commissioners have expended a sum exceeding 10,000*l.* in the erection of the arcades in and upon which the rooms have been constructed; and an additional sum of about 30,000*l.* was expended in the erection of the refreshment-rooms themselves. The land on which they stand is also worth a very considerable sum. It is evident, therefore, that at 120,000*l.* the country has a very great bargain. The Commissioners stipulate that the buildings on the land "shall be permanently used 'for purposes connected with science or the arts,' those being the words employed in the Act under which the Department of Science and Art hold the portion of the estate now occupied by them," and they thus fulfil their trust.

Touching the proposed purchase of the old building, a great outcry is being raised; public meetings have been held to protest against it; and the Institute of Architects have appointed a meeting for Monday next for the same purpose.* A considerable amount of feeling has been imported into the discussion, and is easily understood. An important profession was more than slighted on the occasion of the erection of the building; and the building itself externally is for the most part ugly and unsatisfactory. Here, however, it is; and the question is whether, wanting house-room as we do for various collections and institutions, it should not be bought for the value of the old materials,—the money it would bring as old bricks, glass, and iron columns and girders. After looking into the matter somewhat carefully, we should not put this at so large a figure as 80,000*l.* The Government surveyors, however, with greater facilities, believe this to be the value; therefore so let us consider it. To pull down the solid brick building in the Cromwell-road, comprising the picture-galleries, well lighted and admirably adapted for their purpose, would be an act of extravagant foolishness,—a sin and a shame. The purchase of this at the price the bricks and glass in it would bring, we look upon as an act that would be approved of by nine out of ten of the population if it were polled. A fire-proof floor, and increase of light to the lower part, where we might hope to see a Museum of Architecture worthy of the country, would render the building well fitted for its intention; while, touched by the hand of an accomplished architect, it might be made to take such a form as would be no disgrace to the taste of the age. Our impulse would be to let the contractors clear away the rest of the building; but we doubt if calmer inquiry would sanction the determination. The country wants immediate accommodation, and here it can obtain it at a cheap rate. Even if we used the structure as it is, without any large expenditure, for eight or ten years, the materials would bring nearly as much then as they would now, and we might make the next Great Exhibition pay for a better building in its place. Looking at the question in many ways, with no love for the structure, and without a bias to either side, we arrive at the conviction that if the Government be prevented from buying the building at the price of old materials, a very extravagant and unwise act will be committed.

* "To consider the propriety of presenting a petition to Parliament against the grant of any public money for the purchase of the building of the International Exhibition, on the grounds that, both in design and structure, the building is unsuitable for a public gallery or museum of art." At a noisy meeting held on the 17th, at St. James's Hall, and presided over by Mr. Beresford Hope, it was resolved (an amendment being lost), "That this meeting has learned with regret and surprise the proposal to purchase the International Exhibition building about to be submitted to Parliament by the Government, and it earnestly deprecates so imprudent and wasteful an expenditure of public money." And afterwards, "That a petition should be sent to Parliament, praying it not to sanction the proposed purchase of the building." At a meeting of the "Society for the Encouragement of the Fine Arts," it was resolved,—"That the proposed purchase of the International Exhibition building, with a view to its permanent retention, is objectionable, it having been constructed under pressure to meet temporary purposes, which have been served; the design being in violation of architectural taste, and the structure for the most part is neither stable nor weatherproof, and requiring, for any permanent use, to be rebuilt." A petition to Parliament against the purchase of the land and buildings, and against the removal of the national collections, was also adopted.

ARCHITECTURE, ITS PURPOSE AND PLACE AMONGST THE ARTS.

THE ARCHITECTURAL MUSEUM.

THE last of the present series of lectures was delivered on Tuesday evening, the 16th, by Mr. T. Gambier Parry. After a few introductory observations, the lecturer said,—Before any subject can be studied with success, it is most necessary to begin with understanding what it really means. Now, about architecture, it is no easy matter to say what it means. Many definitions had been given of it, but he doubted the possibility of a perfectly full definition being given of any Fine Art. One most accomplished writer of the day has said that architecture is nothing more nor less than ornamental or ornamented "construction." Another most original author has defined it as the art which so disposes and adorns the edifices raised by man for whatever uses, that the sight of them may contribute to his mental health, power, and pleasure. They both are very true. The first is very downright—the second very æsthetic. But all fine art lies beyond the limit of a definition, because the very idea of a definition implies a limit. Art, in its nature, is illimitable. We love art, because it is like ourselves. We all love and long for sympathy,—even the most ungracious do,—although they would probably scout the idea. That is why all men love nature because it is sympathetic. The clouds which dance and shine about the setting sun, are to one man a perfect picture of happiness and fantastic gaiety; to another their bright forms and changing colours find a counterpart in his mind of bright and changing futures; but still he has pleasure in gazing on them, because they are so beautiful, that they sooth while they recall his sorrows. And thus it is with art. Its power is not in its representing nature, but that its mission is to seize those elements in the mystery of all we call nature, which produce wonderful effects upon us, and thus to interest our thoughts or to engage our affection. We certainly live, for some reasons, in times of great advantage; we are mounted so high up on the ladder of time, that our view is only limited by our own individual power of sight; for the objects are innumerable and the horizon boundless. Of all the avenues of the past, down which we trace the history of our fellow-men, their aspirations and their weaknesses, there are few so full of interest as that of architecture. In that still live thoughts in its ruins—their concentrated thoughts. In all are marked the clear lines of their progress and decline. Look closer, and in the bold broad features of its monuments you trace the vigour of a rising race, the struggle of its youth, the development of its power; and, still further, the refinement of its civilization, and then the too sure sign and symbol of its decay. All are there traced as with a finger of fire. Look closer still, and you see the individuality of a nation's character; the nobility or the meanness of its social state; its political worth; its vigour or depravity. Thus it is that it may be most truly said, the nations of the past still live in their monuments. The inscriptions may be lying vanities, but in their architecture are records of certain truth. We read them as though they were of yesterday, because art is a common language to all mankind. Architecture has had a common origin in all times and countries. He spoke of it entirely as a fine art, apart from building, just as thought is from pen and ink. But architecture is entirely a constructive art. Its whole beauty depends on its construction. The moment it transgresses good construction, it trans-

gresses the laws of good taste. That word "taste" is associated with the vaguest notions of variety. He did not believe that good taste was capable of varying. He believed that its laws were capable of being most clearly written. Indeed, its whole code might very clearly be comprised in the words "good sense." These are delicate as well as strong words; and, taken as a motto, they will bear no vulgar interpretation. The idea of architecture lies in the intention rather than in the act of the builder; and according to the success or propriety in expressing that intention we call it good or bad architecture. The first work with a most genuine architectural intention, has been the mere setting up a stone to testify to an event, to record it for ever, and to tell all men the fact. A mere stone, without science in its erection or ornament on its surface, may do this. You may say "No, that was a monument, not architecture." He granted that it was a monument, and the very rudest conceivable. All he contended for was, that in that rude monument lay the very germ of that yearning for expression which was developed into all the fine arts; and that in a history of architecture, the history of monoliths should stand as chapter the first. A mere plain wall may be a most thorough piece of architecture without a shadow of elaborate ornament, when used with some clearly marked expression, no matter how elementary the idea it contains, whether merely that of rude display or that of power and defiance, as the cyclopean work of the Oscans was evidently intended to produce. If we trace up its history by a comparison of its ornaments, our attention will at last be drawn up its many ramifications to that spot to which the eyes of all nations turn as the home of their common forefathers. Even the American Indian points northward whence his race descended to their present hunting-fields, acknowledging an original home beyond the northern passage. The traditions of Asiatic and European concentrate upon it as the spot whence races, languages, and arts all silently assent to trace their origin. There can be little doubt that forms of ornamentation have travelled in our direction from the East. Very many of them which characterize the earlier forms of European art bear too strong a resemblance to what we know to have been long before in favour in the East, to be mistaken. But with architecture in its larger sense it need not have been so. Architecture has always been a human necessity. The common obligation to follow the natural law of mechanics, and to be bound by the nature of materials, may have led tribes, without a tradition of relationship, to adopt precisely the same methods of construction and ornament. Long before the day of that questionable happiness, when tenderer civilization began to take the place of wild and hardy independence, there were men with whom an impulse much akin to the aspirations of religion forced them to look forward in vague search for something which their common life could not satisfy, and their common language could not express. This poetic sense of the good and beautiful formed its first utterance in the rude measure of a hymn; and thus art began. Then men began to be bound together more closely. Their sympathies were roused, and the idea of nationality began to be sacred. Under such influences three styles of architecture have arisen; or rather, he had better perhaps express it, three distinct architectural systems have been developed, mechanically and decoratively antagonistic to each other. They are the types of all the styles which have ever existed, and that ever can exist. He meant the Egyptian and the Gothic, and that which spreads over the extreme East, which, for want of a better name, he should call Chinese. The first of these, the Egyptian, was based on an idea of strength and stability. In construction, it was simple and rectangular. It trusted for artistic effect (exclusive of its colour and its statuary) to vastness of bulk and length of line, of which the spare relief of carved capitals and hollow cornice only added to the majestic simplicity. Gothic, on the contrary, was constructed exclusively with reference to the use of the arch. Its most striking effect was that of lightness and height, and its idea of beauty was as much that of the truthful expression of its construction as that of more ostensible ornament, for which it pressed into its service all the most beautiful forms it could collect (from the great treasury of Nature). The third typical style, which he had rather vaguely called the Chinese, appeared to him to differ from the other two principally in having, neither constructively nor artistically, any principles at all. Anything is fish that comes to its net. But what could be expected of a people whose ideas of beauty are founded on their own ugly type of humanity, which they delight to honour by still further refinements of distortions? From these three central influences; that is, from the horizontal principle, the upright principle, and the no principle at all, architecture must be derived. All true forms of architectural art have been based on simple good judgment and practical common sense. And just as now from the examination of most ancient languages, the roots of some primæval tongue are traced; so does the genealogy of art lead to a centre of common origin,—a centre, not of place, but of nature; a centre which marks significantly the unity of the human race, the oneness of their physical necessities, the following the same principles, and the expression of the same ideas. In this, of course, he referred only to the similarity of first principles; similarity of ultimate result as the rare exception. Distant nations, who have no record of communication, have never developed their arts alike, with one solitary exception. Mere savages living at each other's antipodes, may have carved the knobs of spears and tomahawks alike, and had war paint and tattoo patterns as similar as if handed down with rigour of sanctity from their first gifted inventor; they may have built alike, and have made their wooden villages, on the surface of lakes alike, from the bronze or iron age of mankind to the era of the first Doge of Venice. Their minor arts also may have been alike traceable to their ornaments, to the universal instinct and love of beauty in the simplest forms. The one remarkable case of similarity between most distant nations (which remains still to be explained) is that between certain arts practised by the first civilized inhabitants of Central America and those of the Egyptians. A similarity of national character would certainly induce a similarity of arts, because arts have always been fostered under the influence of statecraft, national government, and national state religion. But we have no means of tracing any similarity of influences between them. Living at the antipodes of each other, the two most civilized nations of their respective hemispheres developed systems of art which bear a surprising relationship to each other. In the use of hieroglyphics they had hit upon the same method of writing; in architecture the same principle of building. Their system of building is carried out into a system of architecture, with points of similarity too remarkable to be derived from the common requirements or common instincts of the two nations. The relationship of styles in other countries better known to us is very simple. Everywhere is the same tale told of power and wealth going to the shrine to consecrate the arts to the dignity of the state and the honour of religion; and everywhere architecture seems to have been the art on which they lavished all the resources of ingenuity and genius which craft of prince, ambition of priesthood, or superstition of populace could command. The remains of palaces, temples, and all other monuments, bear so great an affinity to each national style that we may take for granted that domestic buildings must simply have followed in their wake, at a respectful distance. The arts of Egypt and Assyria acted and reacted upon each other. That of India was a more florid development of them. Greece owed every architectural principle to them, with the most deliberate and masterly adoption. She lopped the flowers from the fair gardens of her neighbours, and then sowed the seed at home, that, when they bloomed again, they might be only Greek. We are accustomed to attribute to her influence all that afterwards was developed upon Italian soil; but the first rays which dawned on Italian civilization may rather be traced to an Assyrian sun. The Greek influence only developed among the unartistic Romans what they had first borrowed from the first settlers of Etruria. If Greece had set the example of borrowing, she Grecianized the loan. Rome followed her tempting example, for her people had no originality. But the result was widely different. Rome borrowed from two sources, which, in spite of her alliance, proved discordant,—Greece and Etruria; and it was in her attempt to combine them that the principles of true Classic art were first violated. Their artists had little power, their artisans little discrimination. Splendour of conquest, splendour of show, splendour of luxury, were the ruling passions. And the arts were degraded in being made to serve them. How could a people create what was not in their hearts? They lost even the glory of their borrowed beauties. Their republican virtues were lost in the pride of their prosperity. The genius of the arts left them and joined their enemies, then a barbarous but more worthy race, the Goths. And now we have come in the line of this broad sketch, to art reviving under Christian influences. Europe had been revolutionized; opinion, social principles, and therefore social wants, were all changed. Art had to begin again. People were in earnest. They worked earnestly; but the commonest art principles were unknown to them. Old things were not ransacked to be copied, but to be used. The old religion had treated the new one roughly. But now the tables were turned; and the rude Christians ruthlessly pressed everything to their new uses. Nothing fitted anything else. But, working as they did with an honest recklessness of all criticism, the result was sure and the reward great. As their religion was antagonistic to the religion of the old world; so were those arts which grew up under its inspiration, and flourished to do it honour. Untaught as were their first workmen, with rough hands and rude tools they hacked art into shape again. They built and carved whatever was in their thoughts. Their work was the embodiment of their own rough sincerity. And then as they quieted down in calmer times, and thought more gently, and felt more tenderly; so, too, was their work more tender and refined; their walls rose higher, and with them their pillars and their arches. Every feature was free. As with their faith, so with their art. All had been thraldom, now all was freedom. Art breathed freely in the fresh atmosphere of its young life. The people were true to her, and the monuments of those Christian ages bear the impress of their truth, their vigour, their energy, and their devotion. We live in the days of intellectual revolution: never was there such a harmony of contradiction as at present. In former times epochs were marked by special characteristics. What will ours be called by future generations? In domestic life it will probably be called the comfortable epoch;—in social life the discontented epoch. But in art it will be most certainly looked upon as the era of struggle. Our failures will be understood if not pardoned, and our difficulties appreciated. Never were there in art greater difficulties than now. Condemnatory criticism is easy enough. It is all very well to say what we ought to be, because we have the failures and successes of other ages clearly before us. But here is all our trouble. In other ages one idea prevailed at a time, and arts rose to a most perfect concert by their entire harmony. But now, unfortunately, we live in a most disturbed atmosphere. Much learning has made us mad. Everybody knows, or is expected to know, everything. The result is that we are suffering from a plethora of technical knowledge. But knowledge never made artists, nor science arts. They came of a higher source and stand on a higher level. The fact is, that our imaginations have lost their way in a labyrinth of multiplicity. The quieter spirit of former times was more akin to the art spirit. Activity is now-a-days too commonly confounded with bodily and physical movement. But he by no means wished to put art upon stilts. Art needs no balloon to float above the atmosphere of common life—far otherwise. But it does need freedom from that atmosphere of vulgar presumption which is now choking it. The eyes of the public are now so confounded, that they do not know what to think. Our difficulty lies in our diffuseness. The architecture of the ancients attracted within and around its own works those sister arts, without which it never considered itself complete. But in this there was no diffuseness: all worked together with one spirit to one end. There was a good catholic repudiation of any right of private judgment. Whatever they were, Theban or Ninevite, Athenian or Goth, the builder raised the pile, and made it as beautiful as his art could devise; the painter covered the walls; the sculptor filled his allotted spaces. If one was a Greek, they were all Greeks, and only knew and cared for what was Greek; if one was a Goth, they were all Goths, and only knew and cared for what was Gothic. So they worked, each family apart, one in the warmth and sunshine of the south, the other in the bleak rain; but each as a family of brothers: they worked with success, while we, as a nation of rivals, work with confusion. It was hopeless in this country, when high and low were entangled in a labyrinth of occupation, to expect that our people should ever attain to that perception of what is true and good in art which was attained by others in quieter times, when contemplation and time existed as possibilities. People now do not like the trouble of thinking about art, nor of looking below the surface. Abstract beauty is simply a bore, and the symbolism of inward meaning by outward form is poohpoohed. It has been a most unhappy prejudice,

and most common among Englishmen, that it is undesirable that England should become an artistic nation. They forget that when art was at its zenith in Greece, that country was also at the zenith of its glory, and of the vigour of its personal courage, and its manly virtues, self-devotion, and generosity—faculties which we honour, but have never surpassed. Where arts flourished they spoke the mind of a nation; architecture has been the art in which all nations have rejoiced, and in which national creed and social life have been reflected. Having referred at some length to the relation of architecture to the other arts, Mr. Parry concluded his lecture, of which the foregoing is an abstract, as follows: The recognition of universal beauty leads to one or other of two ends—confusion by admixture — truth by subordination. The arts, therefore, to work well together, must practise self-denial. Architecture has been in its purest style the great central influence in the art of civilization. Their combination with architecture has forced them up to a high ideal. I recognize the exquisite beauty of the most imitative art so long as there be mind in it, and not matter only. But the higher the ideal the greater the art, if it can but attain to it. The combination, therefore, of those arts must reach the acme of all human power, which fulfils the yearning of that his highest aim. Look, then, at what a position an architect holds in the world of art if he be worthy of the profession which he makes. Study of all art is needed for such a course as his, for of his art I conclude—and with this I conclude this short review of it—that as gold is among colours, so is architecture among the arts: it is that round which they meet in perfect harmony; and thus, with its sister arts about it, it is that great treasure-store of the genius of our fellow men in ages long gone by; a golden harvest, a precious legacy, left sacred in their safe-keeping for us, to delight our highest sense, to elevate our sentiments, and to discipline our hearts.

The President (Mr. Hope) said,—Your cheers have forestalled the motion which I was going to submit. It was that we should give, according to usage, not formally, but from the heart, our thanks to the thoughtful and eloquent lecturer of to-night. The testimony which Mr. Gambier Parry bore to the position of architecture amongst the arts comes very forcibly from one who is not a one-handed man, who is not an admirer and practiser of one art only. He spoke of the unity of all the arts, of the universal law of beauty which we are all craving after, but which none of us have attained; but which, the more we have not attained it, the more we will strive to compass it. He spoke of the monolith as the first chapter in art. Some of us who have gone by the Serpentine know that it is also the last chapter. I do not say the lowest, as that might be libellous. The last chapter but one is close at hand in the form of the Exhibition building. Whether volume two may open with something better, whether the first chapter of the new series may be something which we may look on with pride and admiration, time alone can tell. With respect to ourselves, we have had seven lectures this session. We have had no meeting for the distribution of prizes, as we thought that a new start in that matter would be a good thing. We offered prizes, and though the works sent in were meritorious, they were not so good as they ought to have been. We only got our money's worth for our money. We have now offered few prizes, but these are of considerable pecuniary amount; and we have given a long day—so long that the prizes will not be given until next year. The first meeting of next session will probably be held for the distribution of the prizes. Let us keep up this good free school of English art, both in its collection, its lectures, and its prizes—a school for which hitherto we have been humbly, earnestly, and trustfully striving. I so take my leave of you for the session of 1863.

WOOD CARVING EXHIBITION.

THE offer of premiums to wood carvers, made by the Society of Arts in conjunction with the Society of Wood Carvers, with whom, through Mr. Lock, the proposition originated, has brought seventy-six works, including a few pictures, photographs, and carvings sent for comparison by the latter society. A greater extension of this part of the scheme (a collection of works of past men) was desired, but has not been obtained on the present occasion. The almost entire absence of architectural carving, and of such works as display any marked genius and feeling for the characteristics of any of the great styles of ornamental art, is strange. The extreme poorness of the specimens including the human figure, also, is discreditable to London workmen, when it is considered what opportunities they have at all the schools of design for modelling and drawing the figure. The great majority of the best carvings, imitations of natural life, are the productions of carvers either resident now in the provinces or who received their art-education there.

The largest display is made from Warwick, with its 10,000 inhabitants. From this little town has proceeded some of the finest wood-carvings executed in this country. The fame of Wilcox, the founder of the school of carving there, and his successor, Kendall, are well represented on the present occasion.

From Warwick we may note came the three well-known sideboards; Cookes' Kenilworth buffet, as it was called, shown in the 1851 Exhibition, and afterwards purchased for 1,800*l.*, and presented to Earl Warwick when he came of age (now in Warwick Castle); one, by the same firm, made for Mr. West, of Alscot Park, near Warwick, illustrative of English sports, at a cost of about 1,500*l.*; and Wilcox's sideboard, made for Mr. Lucy, at Charlecote Hall, costing about the same sum. Wilcox, forty years ago, went as a simple journeyman to Cookes, and afterwards amassed in business as a carver and cabinet-maker a large and most valuable stock; valued indeed, at the time of his death, four years ago or less, at more than 20,000*l.*

Some of the best works have been seen before, or are by men who have made a reputation, Mark Rogers, Perry, Wallis, Dojardin, the late W. Bevan, and others. Works by Meiklejohn, Strapp, Collins, Bryant, Flipping, &c., deserve notice.

The objects of the Wood-carvers' Society are very praiseworthy, and they have lately opened their doors for the first time since their foundation, thirty years ago, to art-patrons, employers, artists, and all well-wishers of art, whether wood-carvers or not, who may become honorary subscribing members at a guinea annually. This, it is hoped, may be the means of bringing to them the money and influence that they stand in much need of to enable them to work out their objects. They have also altered their laws so as to admit wood-carvers resident in the provinces to become members on payment of 2s. 6d. entrance and 2s. 6d. annual subscription, entitling them to the use of their library of 400 volumes, and collection of casts, &c., during any temporary residence in London.

THE DEANERY, GLOSTER.

SOME important and interesting repairs are now being carried on at the Deanery, Gloster, under the direction of Messrs. Fulljames & Waller, and the superintendence of their clerk of the works, Mr. Ashbee. So extensive, indeed, are the repairs and restorations, that the whole of the building has been almost gutted to remove the monstrosities which have been gradually accumulating, to disfigure one of the most interesting buildings of the Domestic kind in the kingdom. The removal of these, the knocking down of lath and plaster walls, &c., may be watched with almost momentary interest. Gothic doorways, Norman windows, columns, capitals, and passages are constantly peeping out and gradually fully developed. Here is a perfect galaxy of architecture—Saxon, say some; Norman, early and late Gothic, Elizabethan, or rather that of her successor James I. It is very seldom, if ever, that such examples are to be found in the domestic abodes, the houses of men, as can be met with here; and that this building was devoted to such purposes there can be no doubt. From the earliest period it was the lodging of the priors; down to the time of the new arrangement in Henry VIII.'s time, it was so tenanted; after that the priors' lodging changed its name and occupants, and it became the deanery; and during these different eras none of the alterations suggested by the fashion or requirements of the day have been discreditable to the period or taste of the times, but the latter. It is scarcely possible to conceive anything in worse taste than the abominations set up as improvements during the later deans' reign. The whole of the really old, interesting, and beautiful work was covered over, and, so far fortunately, where it was possible, with some wretched plaster attempts at Chinese Gothic, and even this a failure; and where some ornamented projection was too bold to be smoothed down with the trowel, it was by the maimers of the day ruthlessly chipped off. Luckily, it was possible to cover over and conceal much, for there was no stint of lime and hair; so with this conglomeration, thick ceilings, and some other shifts of the day by which the previous lofty rooms were split into two, we have still left some charming specimens of Norman shafts; capitals, arches, and windows, of the fifteenth century; and where it is possible by any means to adapt the old rooms to modern uses, no opportunity is suffered to escape of doing so. For instance, in the case of an old Norman one, in later times degraded to the office of a cellar and pantries, it is by the new arrangement intended to convert it into a useful room; its windows, with their early Norman zigzag ornaments, will be opened, and the whole will be so renovated that we may safely assert a much more comfortable room will be made not only here, but elsewhere, than any of the later deans had, with all their fancied alterations and improvements.

There is on the side of the Deanery adjoining the west end of the Cathedral, into which it is imbedded so as almost to form an integral part of the west façade, a fine old Norman room, which has been of yore, no doubt, the chapel for the private use of the prior, but latterly shut up.

The Chinese Gothic window, which partially filled up the lofty pointed-headed one with its Norman zig-zag ornaments, has been removed, and one in accordance with its original character has been substituted. This room will hereafter be the library of the Deanery; underneath this is a room less lofty, but resembling the upper one in its details; at the east end of it is a flight of steps leading into the great cloisters, and immediately on the left of this is another door, affording ingress from the Deanery into the cloisters; and this was the way, most probably, by which the prior passed from his lodgings through the great cloisters* into the Cathedral. The sides of this lower Norman room are lined with stone seats, probably for the use of those waiting for an audience with the prior, to whose abode this lobby was an entrance. Immediately on the outside entrance to the left has been a succession of arches resembling a cloister, of Norman construction; many of the shafts and capitals are in good preservation, and where they have been injured sufficient has been left to authorize a restoration as it originally existed. It is proposed to make this cloister the future entrance to the Deanery; and for this purpose it is very well adapted. Through a door-way here we get into what was the late hall; to make way for which all that could interest us in this place has been destroyed, and we are left with few materials to conjecture what it may once have been. Up an ugly staircase, aged about 100 years, we have on our left that part of the building which we take to be of the fifteenth century; and here, on breaking through the lath-and-plaster partition-wall, some 2 feet from the old wall, a beautiful Gothic stone lantern was brought to light, as perfect as it was the day it was finished. It is a bracketed one, divided into five compartments for light, and in which the horn glazing is still to be seen. It is, of course, attached to or let into the wall, although standing prominently from it, and has altogether a most charming effect. Its preservation was doubtless owing to the circumstance of the lath partition being carried up 2 feet from it: had it been necessary, there would have been no hesitation in chipping it to pieces. Near to it are a Norman shaft and foliated capital, corresponding with those in the cloister above alluded to as the future entrance to the Deanery, but which have been cut away to make room for the present hall and staircase. Close at hand, too, are the remains of a spacious spiral staircase, forming a portion of the building, which we take to be an addition of the fifteenth century.

It seems pretty certain that the whole of this façade has been an addition to, and an encroachment on, the Norman one, cutting it off abruptly, as now seen. Probably the Norman front extended farther north, and in this case it must have presented a very beautiful front. The modern requirement of the Deanery would not of course allow of a restoration of this front, and we should be thankless indeed if we did not feel well content with what is being so liberally done.

Most of the rooms on this side of the Deanery have been altered at different periods from the time of James I. downwards. The late drawing-room—a large apartment—is panelled with some curious old carved work of James's time, in excellent preservation. On the other side we come to the Norman building, with its windows and

* We designate them the "great cloisters," for Gloster Cathedral revels in two; the greater and lesser cloister, both now existing, and both distinct from that which we have termed a cloister in the Deanery.

mouldings of Norman zig-zag work: it has originally been divided into two stories, the upper having an open chestnut timber roof, said to have been a dormitory for the monks: they must have been noble rooms, the dimensions being, if we stepped them accurately, 46 feet by 27 feet. It is intended, we are informed, to convert the lowermost of these fine apartments into a drawing-room; but we have heard with regret—we hope it may not be true—that it is proposed to diminish these fine proportions by taking off sufficient room to make a private library. Doing this would destroy a very fine apartment, and one by no means too large for so high a dignitary of the church, and one which, when furnished according to the requirements of the day, would not be found by any means uncomfortably large. If the dean requires a library here, there is room for one close at hand at the east end. Opposite the old Norman chapel is a low doorway, leading to a wide lobby; might not this be sufficiently enlarged for the purpose? or, if not, just beyond it, we believe, this small study or book-room might be found. Let us venture to hope, too, that the spirit of Norman ornamentation in the future drawing-room may be retained. It is capable of much gorgeous decoration; gilding and colours may be freely made use of, and the walls painted in fresco; and when thus adorned a dean even might be excused from being proud of a taste so worthily displayed. At the back part of the Deanery, and abutting on the Miller's Green, where anciently stood the mill of the abbey, is a fine old timber-built room. Formerly it had its open wooden roof, and many fine "napkin" panels still attest its former magnificence. It was at one time suggested to pull down this room, but it has since been decided to retain it. Its dimensions are about 38 feet by 30 feet.

On examining closely a large painted window in the chapel of the Deanery, richly decorated with the chevron, or zigzag ornament, the clerk of the works discovered that it had been a re-use of the mouldings of a round-headed window, worked up into one of pointed form; and this was proved by the separate pieces not fitting, as of course they would not, the perpendicular rise of the window; the joints had therefore to be made good with mortar. It will be interesting to revisit the Deanery when it is completed.

THE REGISTRATION OF PREVENTIBLE DISEASES.

IN a sanitary point of view this is a matter of almost as much importance as the registration of the causes of death; for, by a careful management, we should thus be enabled to form a more correct idea of the localities in which preventible diseases rage than we have at present any means of obtaining. The medical officers of parish districts are already obliged to record the particulars of the cases which they are called upon to attend. This is a matter which does not cause much trouble, and might be easily managed also by private practitioners. For a sanitary purpose it would be only necessary to give from such records the account of cases of typhus and other fevers, small-pox, cholera, and similar diseases which are to a great extent preventible.

As an instance of the value of such reports, it is worth while to mention that, being anxious to know the extent to which small-pox had prevailed in the Thornhill district of St. Mary's, Islington, we sent to Mr. Lamb, who has charge of the parish cases, and requested him particularly to let us know how the overcrowded houses let in tenements in Upper Bemerton-street were affected with this complaint. We at once obtained from this gentleman the following list from his book of the small-pox cases which had been under his care. The figures refer to the numbers of the houses in which his cases occurred in Upper Bemerton-street:—Nos. 36, 36, 57, 59, 35, 36, 27, 36, 6, 67, 35, 67, 27, 6, 67, 67, 18, 69, 41.* The following arrangement will show the number of cases in particular houses more clearly:—No. 6, 2 cases; No. 18, 1; No. 27, 2; No. 35, 2; No. 36, 4; No. 41, 1; No. 57, 1; No. 59, 1; No. 67, 4; No. 69, 1. This is a record of cases occurring only amongst those who are so poor that they can claim medical relief from the parish; but even the extent of this one particular disease, so far as is here shown, corroborates the opinions which we have before given of the effects likely to result from the overcrowding of these tenements. This, however, is but a small part of the small-pox cases which have occurred in this locality; for many whose families were attacked were attended by the neighbouring surgeons; and of the numbers of these we are unable to obtain any correct account. If there were in practice a compulsory system of recording all such cases, we would be able, with some degree of accuracy, to know how far small-pox, fevers, &c., have prevailed here; and to note to what extent contagion can be traced from house to house.

We believe that a large majority of the medical profession would gladly devote a small portion of their time in this way for the general good; but, for the sake of uniformity, it might be necessary to have some distinct and compulsory means of obtaining such medical returns by a Parliamentary enactment. Convenience for the reception and arrangement of the returns would also be requisite; but this might perhaps be easily managed in connexion with the department of the Registrar General at Somerset House. It would not be necessary to keep the original certificates, as in the case of the births, marriages, and deaths, which require so much space; for we should only need a clear report for periods of three, six, or twelve months: these should be arranged in some way for reference. This *desideratum* may seem to some not easy to manage; but if its importance were duly appreciated, there would be little difficulty in realizing it.

As regards the registration of deaths, Dr. Lankester has shown, at a recent meeting of the Metropolitan Association of Medical Officers, the need of some changes. After alluding to the functions of the coroner, Dr. Lankester statcd, that instead of an inquiry as to the cause of sudden or suspicious death emanating from him, the matter seemed now to be delegated to the coroner's constables. "Any one seemed fitted for that office as now carried out. The oldest man in Marylebone was one of the coroner's beadles. The coroner had thirty-three beadles in his district, when six properly qualified men would do the work both cheaper and better." Dr. Lankester further said that there is a defect in the present law, inasmuch as a *medical* certificate of death is not necessary. A private person may say that he saw the person die: this, he thought, was a fault in the present system of registration. And even the certificate of a medical man as now given was very deficient. Such certificates often merely stated that the medical man last saw the deceased alive at such a time. The coroner also urged the necessity for the registration of still-born children; for which there was now, strangely enough, no provision. This, no doubt, leads to the destruction of many infant lives. In a conversation which followed the above remarks, it was agreed that inquests ought to be held upon persons who died from wilful neglect of vaccination; also in cases of death from typhoid fever, diarrhœa, &c., which were traceable to the neglect of proper drainage, &c., after due and proper notice.

The only fear is that such a system, however useful, might become oppressive to the public. Everywhere, however, we now find medical men corroborating the opinions which we have for years expressed. To keep poor people in the neglected, undrained, and filthy fever dens in which many are, by force of unfortunate circumstances, obliged to live, is as wicked and wilful poisoning, as if the death were caused by the deliberate administration of chemical drugs or poisons.

* These occurred from November 27, 1862, to April 27, 1863.

AN INFANT NURSERY IN AGAR TOWN.

SLOWLY, and as the leases of the property fall out, or are otherwise disposed of, the wretched and unwholesome cottages which have been planted on the soil here are giving way to more substantial buildings; the road-ways and foot-paths are in course of improvement; and before long the peculiar and unsanitary conditions of which we have so often complained will cease to exist. Anything more ruinous and dilapidated than the cottage-dwellings which are still standing at the rear of the St. Pancras Workhouse could not be easily conceived; and many of these are occupied by industrious hardworking women who go out day after day to wash or work. Many of these persons have families of young children, some of them infants, and have to arrange for keeping the little boys and girls from the streets. Miss Agar and other persons who take an interest in the district have shown an anxious care.

There are schools for boys and girls, the church, the soup-kitchen in the season, the visiting of the clergymen and Scripture readers, and other arrangements, which show that the poor here are well cared about; but besides these there is an infant school, to which is attached an infant nursery, which has been found to be a great advantage.

Several attempts have been made to establish these institutions in different parts of the metropolis; but for the most part these experiments have been attended with but little practical effect: the reason of this has not been that such places are not wanted; but some of them have been placed in wrong situations, or not managed in a sufficiently homely manner to suit the taste of the persons who have the greatest need to send children into safe keeping during their absence on business.

In Agar Town, a house of the ordinary kind has been as conveniently arranged as such a thing is possible for the uses of the infant school and nursery. They open at six o'clock in the morning; so that women may leave their children as they go to their various employments. The charge for the care and food of each infant a day is 3d.; but the mother may also leave other young children who attend the school, if they take their food with them, at a cost of 1d. a-day each. The great advantage of this plan is evident.

We have no doubt that the association of infant schools with nurseries, managed with due regard to the preservation of health, and in a plain and unpretending manner, might be usefully carried out in many of the London districts. The people who need this accommodation will in course of time see the advantage of it; but until this occur such establishments will require a certain amount of pecuniary support.

THE RELIEF OF THE COTTON-SPINNERS.

FROM a circular compiled for the Central Executive Committee, and signed John W. Maclure, Hon. Sec., it appears that the returns for May are in all respects satisfactory. Employment is greatly on the increase, and the recipients of relief greatly on the decrease. Since 25th April, 13,451 persons had gone on full work, besides at least 5,000 more not returned. The Boards of Guardians have had a reduction of cases to relieve, from 184,172 to 160,890, and the local committees a reduction of 46,856. The expenditure of the local committees in May was 74,900*l.*, or 14,443*l.* less than in April. The local committees anticipate no great addition to their funds for the future, and it is hoped the Legislature will step in with loans for public works. This the Government are now doing by means of the Bill in Parliament to facilitate loans. Among the principal clauses of this Bill are the following:—

"(3.) Any such loan may be made to any such local authority [entitled to exercise the powers of the Local Government Act], whether such local authority has or has not power to borrow under their local Act, independently of this Act.

"(4.) The total amount to be lent under this Act to any local board or local authority shall not exceed such amount as, together with any sum borrowed by such local board, or local authority, before the passing of this Act, and remain unpaid at the time of any such loan being made under this Act, would be equal to two years' assessable value of the property assessable within the district in respect of which any such loan under this Act may be made.

"(5.) The interest payable in respect of every such loan under this Act shall be at the rate of 3*l.* 10*s.* per centum per annum.

"(6.) The period for repayment of any such loan shall not exceed thirty years, except where the total amount lent under this Act exceeds such amount as, together with any sum already borrowed and unpaid as aforesaid, would exceed one year's assessable value of the property assessable within the district, in which case the period for repayment shall not exceed fifty years.

"(7.) The repayment of any such loan and of the interest thereon shall be secured on all or any of the rates leviable by the local board or local authority on which the loan is made."

Progress is being made towards the obtainment of loans, and the commencemcent of public works in the cotton-spinning district.

At Burnley the authorities have had consultations with Messrs. Rawlinson and Farnall on the subject; and desirable improvements have been suggested, such as the paving of streets, the formation of a new reservoir, and the raising of the embankment of the old compensation reservoir, the draining of the cemetery, and the laying down of an intercepting sewer. It was calculated that about 500 able-bodied men could be selected to be set on work of this description.

At Bolton a conference of a similar kind has been held. It appeared from the proceedings of the various committees that the waterworks committee would require 10,000*l.* for the new reservoir in course of erection. The streets committee consider they could beneficially expend 15,000*l.* in sewerage works. The markets committee and sanitary committee would require to borrow nothing for the small outlay they require; while

for the erection of a townhall, if agreed upon, from 20,000*l.* to 25,000*l.* would be required. The carrying out of these works was earnestly urged by some members of the council, and opposed by others.

At Ashton-under-Lyne, also, Messrs. Rawlinson and Farnall have been consulted. A great many difficulties were raised by several members of the council. Mr. Farnall said the question was, how were the working classes to be kept? He showed that benevolence would not continue unless something were done; but if the best were done, then the committees would assist. If 30,000 able-bodied men could be set to work, and could maintain themselves, every one would take two off, and thus the funds got rid of 90,000 people, and then the committees would be prepared to assist those who could not assist themselves. Mr. Rawlinson then gave his opinion at length on the general question of work, and on skilled and unskilled labour, and answered many questions.

HÜBSCH, ARCHITECT, BADEN.

A LETTER from the banks of the Rhine to the *Correspondance de Rome* says,—We have lost an artist of remarkable talent, the architect Hübsch, first director of buildings in the Grand Duchy of Baden. He was well known in Rome, where he studied in 1817, and whither he returned several times in order to carry on further the study of the history of art. The magnificent monuments of Carlsruhe are due to him, as well as a great number of churches in the Grand Duchy of Baden, and in other parts of Germany.

One of his last works is the restoration of the Cathedral of Spires, in the Romanesque style, with the Necropolis of the German Emperors, among whom rests Rodolphus of Habsburg. The termination of this magnificent cathedral is due to King Ludwig, of Bavaria, who generously provided for the greatest part of the expenses. The Emperor Francis Joseph, as a descendant of Rodolphus of Habsburg, contributed also to this undertaking; and as the necropolis contains, among other tombs, that of the Emperor Adolphus of Nassau, the Duke of Nassau wished also to contribute to the restoration of the cathedral.

Churches were for Hübsch a work of predilection. He was constantly found ready to work gratuitously for the glory of God and the service of religion.

He published several works on the theory of architecture and its history. The most celebrated work, which took up the last years of his life, has for its title, "Ancient Churches according to Monuments and Ancient Descriptions," text with an atlas of sixty-three plates: Carlsrhue, 1862. This book constitutes a new era for the history of sacred architecture. The Christian monuments from Constantine to Charlemagne are described in no other work in so exact and complete a manner; and it not only represents churches still existing, but recomposes also, by the help of ancient authors, those that no longer exist. Hübsch had all the qualities necessary for such a work. A learned artist and a consummate archæologist, he had himself examined the greater number of the monuments illustrated in his work; and for the most important he had renewed his studies several times. From his long studies and deep researches conclusions of the highest importance have resulted for the history of art. Contrarily to the opinion commonly adopted by writers who content themselves with superficial studies, he shows that the Christian architecture of antiquity was by no means an imperfect formation which was to find its progressive development in the Romanesque period, and the Gothic formation in the points of Christian character and artistic value. Hübsch recognizes and admires, in that primitive architecture, a perfect, grandiose, independent creation, analogous to the contemporary period of the literature of the fathers of the fourth and fifth centuries. The plates and text of the book are thoroughly completed, and a new edition of it with a French text is to be immediately published.

TRADES' UNIONS AND WORKING MEN'S CLUBS.

LAST week the council of the Working Men's Club and Institute Union received a deputation appointed by the London Trades' Council to ascertain the precise relations of working men's clubs to trades' societies. The Council of the Union was represented by Mr. Thomas Hughes, B.A., Mr. Russell Scott, Mr. John Bainbridge, Miss Isa Craig, Miss S. A. Davis, Mr. Alfred Alaric Watts, and others; and the members of the Trades' Council present were—Mr. Odgers, Mr. Facey, Mr. T. J. Dunning, Mr. William Allan, Mr. Cremer, Mr. Applegarth, Mr. Coulson, &c. Mr. Scott opened the conference by stating that the council of the Institute Union, having become convinced that a certain passage in their publications gave an impression not consistent with a strict neutrality on the question of trades' unions, had resolved, at their last meeting, to expunge them. A long discussion then took place, and the following points were unanimously agreed to:—The Union could take no part either for or against trades' societies, whose objects, and those of working men's clubs, were clearly diverse; nor could the council of the Union say whether a trade society would be allowed to hold its meetings in any particular club-house, the settlement of all such questions resting with the local committees; but certainly no club where a trade society should meet would on that account be severed from the Union. On the contrary, it was considered advisable to encourage all working men's societies engaged in the pursuit of objects neither illegal nor immoral, to conduct their business at clubs, instead of, as at present, at public houses. Members of trades' societies would join working men's clubs as private citizens, and not as trades' unionists; but a trade, friendly, building, or co-operative society could apply to the committee of a club for permission to conduct its business on the club premises, on payment of a small rent. The letting of premises by the local club committee to the society would not identify the former with the latter; and in case of a strike, for instance, the council of the Institute Union would not think of interfering, unless the trades' unionists excluded or expelled from the club those who were non-unionists. In any case, the council could only expunge the name of a club from the list of associations in union. These views having been very distinctly stated, in reply to the questions proposed to the council, the members of the deputation declared themselves perfectly satisfied, and tendered their hearty thanks for the manner in which they had been received, as well as for the explanations given. It is understood that the deputation will present a report to their constituents, recommending the members of trades' societies throughout Great Britain to assist in carrying out the objects and plans of the Club and Institute Union.

WATERWORKS AT HAY, NEAR HEREFORD.

The waterworks for this town are now completed, and many of the inhabitants are already availing themselves of the supply, which is constant, and with a head of 300 feet.

The reservoir, 175 feet by 54 feet, and 11 feet in depth, is supplied by a mountain stream some half a mile distant, which is diverted, and then passed through a filter, 6 feet in depth, of gravel and sand, before entering the reservoir, where it is joined by two springs obtained by boring about 30 feet to the rock (old red sandstone formation). Previously to these supplies entering the mains from reservoirs they have to pass through another filter-bed, on the ascension principle, formed of slabs (Ransome's patent), with a pressure of 12 feet. The supply is thus filtered by descent and ascent.

The works, including the laying of about three miles of 5, 4, and 3-inch mains, with hydrants, valves, &c., have been completed for 1,800*l.* Mr. Harcourt Thompson, C.E., who was the originator of the scheme, has also carried it out. The land and water required were granted to the company for ever, by Mr. Henry Allen, of Oakfield House, Hay, in return for a yearly acknowledgment of 3*l.* 3*s.* for right of way over the mains, springs, waterways, &c., in case of accidents or other casualties.

THE SANITARY STATE OF NEW YORK.

THE report for 1862 of the New York City Inspector asserts that the sanitary condition of New York is superior to that of London, and that this city is actually more healthy than any other great metropolis in the world. Nevertheless, as the *Tribune* admits, streets are unsewered, houses undrained, and there are 6,000 families living "in underground cellars, without air, without light,—undrained receptacles of stagnant water, in which decent cleanliness is nearly impossible, and tolerable health wholly so." And it is not from want of power in the City Council to put an end to this wholesale sacrifice of health and life that so glaring an evil is allowed to continue: the Common Council have the power, if they only choose to exert it. The *Tribune* also states that "tenement houses are but little improved since their horrors were first revealed. As in the underground cellars, more space, more air, more light, and the most ordinary conveniences for cleanliness are required to make them fit for human dwellings, and the enforcement of some internal police regulations for sanitary purposes is still opposed or neglected by the cupidity of owners, indifferent to any system of improvement except in the matter of rents and their prompt payment." The city still tolerates slaughter-houses and fat-boiling and bone-boiling establishments in its thickly-peopled districts, and it is even asserted in the inspector's report that their number is constantly increasing.

THE ARCHITECTURAL ASSOCIATION.

THE usual meeting of members was held on Friday, the 12th inst., at the House, in Conduit-street; Mr. T. Blashill, in the chair.

The President announced that the following names were submitted for nomination of office bearers for the ensuing year 1863-4:—For president, Mr. T. Roger Smith; vice-president, Mr. R. Phené Spiers; committee, Messrs. Molecy, Reeves, Ridge, Bayne, Julian, Paris, Lewes, and Turner; treasurer, Mr. C. J. Adams; solicitor, Mr. F. Truefitt; Auditors, Mr. T. M. Rickman and Mr. B. A. C. Herring; curators, Messrs. C. H. Lewes and J. Johnson; honorary secretaries, Mr. C. J. Adams and Mr. J. Douglas Mathews.

The adjourned discussion on the consideration of the report of the sub-committee on the affairs of the Association generally was resumed by Mr. Paraire, who took exception to certain of the statements in reference to the accounts, and to certain suggestions or recommendations of the committee. In conclusion, he moved that the report be referred back to the general committee for reconsideration. This resolution led to a desultory and somewhat personal discussion, in the course of which explanations were offered by members of the committee. Ultimately an amendment, to the effect that the sub-committee was entitled to the confidence of the Association, was agreed to. A resolution conveying the confidence of the meeting in Mr. Adams, the honorary treasurer and one of the honorary secretaries, was also agreed to.

At the conclusion of the debate, which was protracted to so late an hour as to preclude the possibility of reading the paper of the evening,

Mr. T. Roger Smith observed that, as the Association had done him the honour of nominating him to the presidentship for the ensuing year, he intended to use his influence to arrange so that a fair hearing should be given to those gentlemen who were prepared to read papers. He regretted that, owing to protracted preliminary discussions during the last few evenings of meeting, it was impossible to follow up the reading of the paper by that subsequent debate, which, he had no doubt, the members generally would desire to participate in.

It was announced that, at the next meeting, Mr. North would read a paper on Chichester Cathedral; and that, should time permit, Mr. T. R. Smith would call attention to the subject of summer sketching. *

NORTHERN ARCHITECTURAL ASSOCIATION.

A SPECIAL meeting of this Association was held on Wednesday, the 10th inst., in the Old Castle, Newcastle-on-Tyne; Mr. Thomas Austin in the chair.

The following were appointed delegates to the forthcoming meeting of the Architectural Alliance:—The Vice-President (Mr. T. Austin), Mr. Pritchett, and Mr. T. Oliver.

Mr. Pritchett said that of the two points of business which they were desirous of bringing before the Alliance, one was the adoption of a scale of professional charges, to be recommended, not in the nature of an authoritative order, but from a desire that such a scale might be adopted as would prove of advantage to the members. Those of them who had seen the *Builder* of the 6th, would understand why the recommendation should take that form. Some of the London Societies

* *Voluntary Architectural Examination Class.*—On Wednesday next, the 24th instant, Mr. C. H. Smith will give a lecture on Geology and Building Stones. On this Saturday, the 20th instant, the class will visit St. Bartholomew the Great, Smithfield, at half-past two.

DUNSDALE.——*Entrance Doorway.*

had given instructions to their delegates that if anything of this kind were attempted to be crammed down their throats they should retire. They had adopted a scale of charges themselves with advantage, and he thought that scale should be brought forward at the Alliance meeting as the nucleus of a scheme of the kind to be submitted to them for their adoption. They found that their own scale was not perfect in some respects; and that was as regarded valuations. They had in their scale no fixed charges for valuation. The charges under this head seemed to be framed under the assumption that all valuations would be carefully made valuations with a view to a sale. But Mr. Austin had called their attention to the cursory valuation for a mortgage and that sort of thing, which was not provided for in the present scale.

The Chairman said that their honorary solicitor had made some remarks which threw new light upon the subject of valuations. It appeared that legally there was no difference between the duty of an architect in the case of a mortgage and in the case of a sale, as he was responsible for the accuracy of the valuation in both cases. But unfortunately their practice was not so; and how to square their practice with the law he was rather at a loss to know.

Mr. Oliver having stated his views as to the mode in which the matter should be brought before the Alliance,

Mr. G. W. Hodge said that with reference to the question of a valuation for mortgage, if he on behalf of a client proposing to lend money on a house, wished to be advised as to the value of the property, and with that view took the precaution of having the opinion of an architect or valuer, he could not for the life of him see how the architect was to get rid of the responsibility of advising.

Some discussion took place on this point, after which it was resolved:—

"That the delegates from this Association be requested to bring before the meeting of the Alliance, to be held in London, on the 1st of July, the question of a scale of professional charges for its adoption, and the recommendation of such scale of charges to the Allied Societies;" and "That the delegates from this Association be requested to bring before the Alliance the question as to the desirability of drawing up a circular to be sent to the promoters of all public architectural competitions, pointing out what the members of the Alliance consider the proper course to be adopted in the preparation of conditions and instructions, and the adjudication of premiums."

DUNSDALE; WESTERHAM, IN KENT.

DUNSDALE is the residence of Mr. Joseph Kitchin, and is situate close to the village of Westerham, in Kent. The house occupies a picturesque eminence, surrounded by pleasure-grounds of moderate extent, which have been laid out by Mr. Milner, the landscape-gardener (late of the Crystal Palace). A small portion of a former house is incorporated with the new building. The accommodation is as usually provided and disposed in a gentleman's house of the size. The walls are built of local stone, dressings included, except a few blocks of Caen stone for carving. The square tower marks the entrance, which happens to be on the quarter most removed from the line of approach; the drive having, in fact, to pass almost entirely round the house. In accordance with this circumstance, if not also in pursuance of a sound abstract rule, all faces of the building are equally carefully designed and well finished. The architect says a good house is like a good square of infantry: it looks you full in the face all round. The builder was Mr. Myers, of London: the architect, Professor Kerr.

The entrance doorway is placed on the ground story of the square tower, and is formed of Caen stone. The arrangement of design is of the simplest kind, and the effect is left wholly to the art of the carver. Natural foliage supplies the subject throughout; and, being delicately executed, produces a pleasing effect. A massive oak door (in fact, a good old bit of carpenter's Gothic, stripped and re-dressed) completes the design.

ST. JAMES'S, WESTMINSTER.—A public meeting is to be held in the new Vestry Hall, Piccadilly, on the 30th inst., to form, as we understand, a building-improvement committee, with especial reference to the opening of Rupert-street.

DUNSDALE; WESTERHAM, IN KENT.—Professor Kerr, Architect.

DISTRICT SURVEYORS AND RAILWAY COMPANIES.

THE district surveyor of Clerkenwell has appealed to the Metropolitan Railway Company for compensation for the injury inflicted on him by the occupation of the intended new street by their premises, whereby he says a loss of possibly seven or eight hundred pounds will result to him, with the addition of a permanent yearly abstraction from his income, as the ground is alienated for railway purposes.

CAMBRIDGE SCHOOL OF ART.

THE distribution of medals, prizes, and certificates, in connexion with this school, took place at the Town Hall on the 5th inst., under the presidency of the Master of Trinity College, supported by the Earl Granville, Mr. Cole, Mr. Beresford Hope, &c. The lady patronesses present were Lady Affleck, Mrs. Bateson, Mrs. Humphry, and others. The company was numerous, and highly respectable. For an hour previous to the commencement of the proceedings, there was a sort of promenade in the adjoining room, where a collection of works of art was exhibited.

Earl Granville, in his address, alluded to the great progress in art which this country had displayed at the last International Exhibition,—a progress fully recognized by the Germans, Italians, and French; and the highest practical art compliment which the French could pay us was to imitate our schools of art, as they have done. In allusion to the local school his lordship said there were great advantages belonging to the town which made it peculiarly favourable for art study. The Fitzwilliam Museum, for instance, both as to the building itself and as to its contents, was infinitely valuable to any one who pursued artistic studies; giving, as it did, specimens of works of art both of past ages and of the present. Again, as decorative art, he referred them to the woodwork at Queen's College, to the numerous exquisite stained-glass windows, and to a variety of other works in wood, stone, and metal, which made Cambridge very rich in this respect; and what they had just seen in an adjoining room showed that art was appreciated by all classes in this town and university, and that many objects of great value were possessed by the people here.

Mr. Hope urged that in the University, where mathematics and literature were so successfully studied, a cultivation of the knowledge of the beautiful should not be neglected. It was a matter in which the University ought to move; and he hoped it would not be lost sight of.

CESSPOOLS AND TYPHOID FEVER AT GALASHIELS.

DR. BRISBANE having been consulted by the local commissioners as to the connexion of the town cesspools with fever, and the consequent desirability of getting rid of the cesspools, has reported that the facts as to *typhoid* fever for some years past, prove the connexion of such fevers with the cesspools. As to the precise nature of this connexion, he says, — "That outbreaks of typhoid, enteric, or gastric fever, are essentially connected with defective drainage is now an almost universally acknowledged fact. Whether the fever poison is generated *de novo* by decomposing sewage, or merely *fostered* thereby, may admit of some doubt; but no doubt whatever exists as to the intimate relation between outbreaks of gastric fever and the emanations from sewage, or other putrescent substances. The continued fevers met with in this country have been divided into four classes by Dr. Murchison:—1, *febricula*, due to errors in diet, heat, fatigue, &c.; 2, *Relapsing fever*, due to famine; 3, *Typhus fever*, due to overcrowding and destitution; 4, *Typhoid*, or *gastric fever*, due to causes above stated. It is notorious that *relapsing* fever is never met with in Galashiels, and *typhus* rarely, the species of fever almost always met with being febricula, or gastric. Again, it is sufficiently established that the latter fever generally prevails most in autumn, particularly during dry, warm seasons, the high temperature favouring decomposition, while the defect of water prevents the efficient removal of the putrid substances thus generated. The causes of any disease being known, and these being *remediable*, it behoves our sanitary authorities to direct every legitimate and available means towards the eradication of these." It must be understood, he adds, that I believe the above cause is an equally fertile source of other and more formidable epidemics—diphtheria, cholera, &c. The quality of the water has also much to do with the health of the community.

CHURCH-BUILDING NEWS.

Lambeth.—St. Philip's Church, Lambeth, which has been for a long time past in course of erection in the Kennington-road, has now been consecrated. The fund for the erection and endowment was commenced at the close of the year 1849. It now amounts to nearly 14,000*l.* There needs but 200*l.* to complete the whole work that has been undertaken; viz., the purchase of the site, the erection of the church and parsonage, and the securing a permanent endowment of 200*l.* a year to the incumbency.

Thetford.—The first stone of the chapel for the use of the inmates of Thetford Union House is about to be laid by Lady Walsingham. The building, which is intended to accommodate 150 persons, will be in the simplest Gothic style, 48 feet long by 21 feet inside. The contract for the mason's work has been taken by Mr. J. Palmer, of Thetford; that for the woodwork by Mr. J. Scott, of West Tofts. The whole amount required for the work, upwards of 300*l.*, will be supplied by voluntary subscription.

Eton.—In addition to the improvements lately effected in the chapel of Eton College, a complete process of decoration has just been completed at the east end, immediately beneath the great window, an example of colour and gilding applied to architectural stonework. The panelling above the sedilia on the south side will also be decorated, having on the north side an ancient-coloured tomb erected to the memory of Provost Murray. Thus the whole space within the altar-rail, by its polychromatic arrangement, stands distinct from the rest of the chapel. The entire work has been executed by Messrs. Harland & Fisher, of London. The whole expense of this decorative work has been defrayed by the Rev. J. Wilder, one of the Fellows of the college; who, by many former contributions, has added greatly to the beauty of the interior of the chapel.

Tackley (*Oxon*).—The restoration of Tackley Church is making progress under Mr. Franklin, of Deddington. Three new windows are already put in, and the whole exterior has been cleaned and pointed. On removing the plaster from above the chancel arch, faint traces of a coloured design were found; representing, apparently, a figure seated in the centre, and an angel on each side offering incense to it. Low round arches were also discovered, built up in the walls, over which the present church, of more recent date, had been constructed. 500*l.* are still wanting to complete the alterations proposed by the architect, Mr. Street.

Spaldwick (*Hunts*).—The ancient church of this village, having been closed for several months past, is now re-opened. The interior, which had fallen into a state of dilapidation and decay, has been restored under the superintendence of Mr. R. W. Edis. A new roof has been placed over the south aisle, and releaded: the old and unsightly pews have been removed and replaced with open seats: the belfry, which had been separated from the nave by a screen of wood and plaster, has been laid open, displaying the belfry arch, before entirely hidden. The old pavement throughout the church has been replaced with new tiles; and a warming apparatus, by Rimington, has been introduced. In the chancel, improvements have been made. Five windows in the nave have been filled with cathedral glass, interspersed with Powell's quarries of various designs, the porch restored, and the new south and west doors inserted. The seating, chancel-stalls, prayer-desk, and belfry-screen were executed by Mr. Poole, of Kimbolton; and the stonework by Mr. Tomson, of Cambridge.

Ely.—The new lantern tower of Ely Cathedral, which is designed as a memorial to the late Dean Peacock, is progressing. The upper portion of the two south-eastern bays has recently been unmasked. Mr. Hill, of London, has undertaken the task of covering the whole of the external woodwork with lead; and a staff of workmen, under the direction of Mr. Warde, have commenced operations upon it. The canopied panels of the choir-stalls are being filled with carvings, in alto-relievo, of the principal incidents of Bible history; subjects from the Old Testament being placed on the south side, and those from the New Testament on the north side; of which two, representing the betrayal of our Lord and his being taken before Pilate, have recently been added. The work of decorating the ceiling of the nave roof, begun by the late Mr. L'Estrange, is once more progressing under the direction of Mr. Gambier Perry.

King's Cliffe (*Northamptonshire*).—The church of St. Leonard or All Saints, Cliffe Regis, has been re-opened for divine service, after a restoration of the interior. The open seats are of oak, the carving on the bench ends having been copied from the old examples here; and which, with the pulpit and reading-desk, were brought from Fotheringhay Church. The early carving has been preserved. The floor has been paved with Maw's encaustic tiles. The restoration has been carried out by Mr. Bradshaw, of Stamford; the architect being Mr. Browning. The outlay has been between 1,200*l.* and 1,300*l.*; and of that sum about 200*l.* were required before the re-opening.

Kenilworth.—The parish church of Kenilworth has for many years been in a state of dilapidation and decay. It is now proposed thoroughly to repair and restore the fabric; to clear away the galleries, which, besides being in a tumble-down state, obstruct the light and air; and to re-seat the church throughout in such a way as to provide the necessary accommodation for the parish. An enlargement of the church is also projected—the seats to be free for the poor and strangers. The cost of such enlargement will be about 400*l.* Plans for carrying out these objects—at an estimated cost of 2,500*l.*—have been approved by the parish, provided 2,000*l.* be raised before August 1st, 1864.

Tunstall (*Staffordshire*). — During a recent thunder storm the tall spire of St. Mary's Church, Tunstall, was struck by lightning, and five yards of the stone-work of the topmost portion were completely destroyed. The falling masses of stone crushed through the roof of the church, destroying a number of pews usually occupied by the Sunday school children, but fortunately just missing the organ. At a meeting of gentlemen of the town as to the best course to be pursued, the Rev. R. Hawes, incumbent, in opening the proceedings, said that he had long ago mentioned the necessity of having a lightning conductor to the spire of the church. There was on the top of it a large iron cross, a solid iron ball, and a long sheet of iron capping the stone; and he knew from the laws of electricity that, as there was no conductor, if the lightning should ever strike that iron it must necessarily shatter the stone of the spire. The Birmingham Fire Insurance Company, in whose office the church had been insured, had, in reply to a communication, written a very curt letter, stating that they were not legally liable. He had obtained the opinion of Mr. J. M. Hay, architect, of Liverpool, and Mr. John Burns had, at his own request, examined the spire. Mr. Burns's suggestions were that three iron bands, secured with twenty-four bolts, made with a T-head, should be let in the stonework; the damaged stone to be cut out and replaced with good sound stone, well bedded and pointed; the top to have a bar of iron anchored, and to extend to the top; a copper cross and cock, with a lightning conductor, to go up through the cock and stand 12 inches higher. The work would cost about 95*l.*, and the spire so restored would be as strong as if rebuilt. It would not be impaired by the ringing of the bells. The 95*l.* included taking out the fractured stones on the north side of the two arches. Mr. C. Malpas reminded Mr. Burns that one stone of the spire would weigh a ton, upon which Mr. Burns said he could raise a new stone that weight, but the expense would be increased thereby to the extent of about 20*l.* The report of Mr. Hay, who had carefully examined the spire, stated that the lightning, attracted by the heavy iron vane, cross, and sheathing on the apex, had shattered the top stones and rent the spire along the course of the north-west angle. The method of restoration he suggested was to take the spire entirely down to the level of the top of the tower, and so much of the north and west sides of the tower as would then be necessary. The masonry of the belfry story was not well bound together, and the mortar between the joints in most cases had entirely perished. The probable cost of scaffolding and re-erecting the spire would be about 350*l.* The cost of taking down the spire and finishing the tower, with the pinnacles and slated roof, or lead flat, would be 250*l.*; but that he should not recommend for the sake of its durability and appearance. A third plan had been suggested to him; viz., leaving the lower part of the cone of the spire, and carefully re building the west side, tieing in the angles as the work proceeded; but the prudence and economy of that plan were problematical, and he decidedly recommended the

first plan. The meeting adjourned to ascertain what amount the gentlemen of the town would give towards the construction of a new tower, as suggested by Mr. Wedgwood, or towards the repairs of the tower and spire, as suggested by Mr. Hay. The roof of the church is at present undergoing repair. This church was considerably damaged during a storm on the 6th of January, 1839, when three of the pinnacles of the tower were knocked down.

Keynsham (Somerset).—The parish church of Keynsham has been re-opened, after undergoing a restoration, at a cost of over 4,000*l.* The general contractor was Mr. J. Bennett, of Bristol; Mr. H. W. Sheppard, of Keynsham, executing the mason's work, stone carving, &c.: the painting and decorating were performed by Mr. J. C. Hill, of Bristol; the wood carving, restoring the aisle, screens, &c., by Mr. Shipp, of Bristol. The architect was Mr. B. Ferrey, the diocesan architect. The chancel has been restored by the Duke of Buckingham. A new oak roof has been placed in the chancel, and a new window, while the walls have been cased with freestone. The roof is supported by carved freestone corbels, representing various figures, and executed by Mr. Margetson, of Bristol. The stone arches supporting the roofs of the north and south aisles have been rebuilt. A new roof of Westmoreland slate has been placed on the nave, and the roofs of the aisles have been taken down, cleansed and replaced. The inner roof or ceiling of the nave is open woodwork, with carved devices, supported on handsomely carved corbels. The church has been re-pewed, and will accommodate 1,000 persons. The seats are of stained deal, and open, 400 free. The arch dividing the chancel from the nave is new, and of freestone. At the east end of the north aisle the base of the old tower has been thrown open, and two new arches placed there. Over one of these arches is a traceried window, presented by the architect.

PROVINCIAL NEWS.

Bisley (Gloucestershire).—The re-opening of the Wells took place with some ceremony on Ascension Day. The works consist of five Gothic fountains, two large washing-troughs, a dog and horse trough, each in a separate place, and a large pool for cattle. The former form five sides of an octagon, and each fountain flows from a short spout in a niche surmounted by a pediment. In each of these is carved some subject, as the plume of the Prince of Wales, the interwoven monogram "A.E.A.," &c., &c. Above all the inscription, "O ye wells, bless ye the Lord, praise Him, and magnify Him for ever," runs the entire length of the erection. The whole is denominated "The Wells," and is permanently supplied with a copious supply of water, flowing from the rock on which stands the village church.

Malvern.—Mr. J. V. Hornyold has just erected a mansion at Blackmoor Park, near this town. The building is situate in the midst of a park of fine old elms and oaks, about 200 yards from the site of the old house. It is in the Tudor style, and is of brick, with Bath stone dressings. The main entrance is on the south by a *porte-cochère*, projecting from the front about 20 feet, having on the top a balcony, and three arches on the south, west, and east sides, being infilladed by windows on the west and east sides. A flight of steps leads to the house. The windows are mullioned, and on the south side they are flush with the front, but on the west side there are three bays. The roof is pitched, with bands of ornamental slates, chimneys, and coping. In the centre of the lawn is a fountain, and round the ground runs a palisading. The building is erected from plans furnished by Mr. D. Brandon, of London. The builders are Messrs. G. Myers & Sons, of the same city; foreman, Mr. Bellamy.

Swindon.—An attempt is about to be made to erect a Corn Exchange at Swindon. It appears that, since 1856, the quantity of wheat sold at Swindon market has declined from 34,000 qrs. to 18,000; and it is believed that the falling off is attributable to the want of proper accommodation.

Liverpool.—At a select vestry, the proceedings of the Workhouse Committee on a new fever hospital having been read, Mr. Peck, in moving their confirmation, stated that the committee had paid much attention to the plans for the new fever hospital. The plans had been approved by the Workhouse Committee; and they had resolved to ask powers to borrow a sum of 5,000*l.* for the purpose of completing the building; but, inasmuch as Mr. Wylie had since said that his estimate of 5,000*l.* was rather under the mark, they now thought it advisable to ask power to borrow 6,000*l.* The plans were approved and adopted.—— In pursuance of a recommendation by the Finance Committee of the Town Council, it was agreed to accept tenders for the completion of certain portions of work connected with the erection of the new Public Offices in Dale-street. Mr. Stewart stated, in the Council, that the tender of Messrs. Newall for Dumfriesshire granite for the lower plinth of the building was at the rate of 4*s.* per cubic foot. The six Aberdeen red granite door-cases which Mr. Macdonald tendered to supply were of the same description as that of St. George's Hall, and which was also supplied by Mr. Macdonald. He undertook to supply the six door-cases worked to drawings for 676*l.* The next tenders on the list were for the more important works of the buildings in pursuance of the recommendation of the Council. They had themselves selected a number of parties, to whom they sent plans and specifications; and, in pursuance with their plan, they were bound to accept the lowest tender. Messrs. Parker & Son's tender for the mason work was the lowest of the tenders received; and Mr. Stewart moved that this tender be accepted, which amounted to 22,008*l.* The next tender was one to which the same remarks would apply; and they recommended that the tender of Messrs. Holme & Nicol be accepted for the brick-work, excavators', and labourers' work. The tender amounted to 10,895*l.* The motion was agreed to.

COMPETITIONS.

Wesleyan Chapel, Lozells, Birmingham.—The design of Mr. J. G. Bland, architect, has been selected in competition for the proposed new chapel, which is to accommodate eleven hundred persons. The building is in the Gothic style, and faced with parti-coloured brickwork. The length is 84 feet, and the width 53 feet. The front of the chapel will face George-street; and in this elevation there are two entrances, one on either side, that on the left hand being under a tower surmounted by a slated spire 120 feet in height.

Malvern Proprietary College.—It appears to be proved by the evidence of the person employed to see to the unpacking and arrangement of the competitive designs, that some, at any rate, of the drawings illustrating the design which has been selected, arrived many days after the time stipulated for their reception. It is quite useless for us to expose and condemn such proceedings. Architects have themselves to thank for the existing state of things. The very same men who feel themselves aggrieved now would compete again next week if the opportunity occurred, and "take the chance" of accidents running in their favour. The whole system is rotten and foul.

Nottingham.—For two churches to be erected in Nottingham, restricted to Nottingham architects:—

St. Anne's Church, called No. 1.—Mr. R. Clarke was appointed architect. Messrs. Hine & Evans, first premium, 20*l.*; Mr. J. S. Norris, second premium, 10*l.*

St. Saviour's Church, called No. 2.—Messrs. Sutton & André, architects. Messrs. Sutton & André, first premium, 20*l.*; Mr. J. C. Gilbert, second premium, 10*l.* Mr. Ewan Christian, architect, was called in as referee.

Contemplated Buildings, Leigh Woods, Clifton.—The first premium for laying out the property of Sir Greville Smyth, Bart., now the site of Leigh Woods, has been given to Mr. Meyer, of London; the second, to Messrs. Pope & Bindon. Bristol and Clifton should watch well the contemplated proceedings, which may destroy much of the romantic beauty of the Nightingale Valley. Arrangements in time might prevent the injury.

THE STAGE.

Royal Italian Opera, Covent Garden.—Mons. Obin, who made his first appearance in "Roberto il Diavolo" a few nights since, is an acquisition. He is a good sound singer, with an excellent head and figure for the part. The representation as a whole is satisfactory; the *spectacle* superb. Madlle. Fricci is making way with the public. The view of a ruined church and cloisters for the resuscitation scene, with the fitful appearance of the moon capitally managed, is quite beautiful; but (always a "but") why are we never to have in this opera chronological correctness? Robert I., Duke of Normandy, surnamed "the Devil," died in the eleventh century. "The story is extant, and written in very choice Italian." But the church represented is a fourteenth century work, unmistakably and correctly. The public, however, are not scrupulous in such matters, mostly knowing nothing of the right and wrong of the case. They accept the scene for its beauty; and, from that point of view, so do we, without a qualification. Patti, in "La Gazza Ladra," is charming.

Her Majesty's Theatre.—The production of M. Gounod's "Faust, at this house, has proved a great success, and will probably save Mr. Mapleson the necessity of any further effort in the direction of novelty. The story, full of philosophy and teaching, and which ever touches the heart; the singing and the acting of the principal performers, Madlle. Titiens, Madlle. Trebelli, Sig. Giuglini, and Mr. Santley; and some appropriate and fairly painted scenery, the "Kermesse," Margaret's garden, and the street scene with church, aid the good music of the composer,—music which, if we mistake not, will live. The version of the story followed is precisely that of the Princess's, and the recollection of Mr. C. Kean's remarkable performance of *Mephistophiles*, may be one reason why Signor Gassier's assumption of the part, well as he sings a portion of it, does not please us. The old men's chorus at the commencement of the second act, and the soldiers' chorus in the fourth act, "Gloria Immortale," produce enthusiasm.

MENDICANT SCHOOL BUILDERS.

A CLERGYMAN, rather celebrated for his epistolary mendicancy, some time ago sent one of his circulars to the secretary of the Charity Commissioners, and received in return *one penny stamp.* Determined to keep up the fun of the thing, he acknowledged it on the largest sheet of post paper, inclosing also a formal receipt, with the following lines, the whole being forwarded to the donor in a most official-looking envelope. The lines ran thus:—

"Once on a time, a clerical petitioner
Called on a certain Charity Commissioner,
Made a low bow, declared his name and place,
And briefly gave a statement of his case.
'Two parish schools my lot has been to build.
And see those schools with lively youngsters fill'd:
I thought my work was done, but 'tis not so,
For children in my district thickly grow.
Now, these will turn out bad ones, I expect,
Unless another school I can erect,
In which to fit their minds with wholesome food,
And train their hearts to what is right and good.
Respectfully I ask you, Are you willing
To give a trifle towards my school—a shilling?'
The needy knife-grinder of Canning's tale,
O'er whom the patriot made such piteous wail,
Received about as much substantial aid
As this poor parson when his plea was made.
I will not say the secretary *swore*;
But, rising up, he show'd the priest the door,
And said, 'A Charity Commissioner, 'tis true,
I am; but there's no charity for you;
Not though your cause be good, your reasons many—
But stop, you cassock'd beggar, there's *a penny!*'"

"DECORATIVE HOUSE PAINTING," AND THE BUILDING TRADE GENERALLY.

YOUR correspondent, "Thomas Kershaw," says, and very truly, "it is high time something should be done to place this business on a better footing. It is too much in the hands of builders and agents who know but little of the business, and merely use it as a matter of £. s. d. This accounts for so much bad painting being done. The architects have it in their power to alter this, to a great extent, by giving each tradesman his own special work."

This well applies to every branch of the building trade. If we turn back and examine the customs of a century or two since, we might ask ourselves the simple question—what was the origin of the City Companies? In the long list of them we find no "Builders' Company," although the *mechanics* or *labourers* who worked at the Tower of Babel are termed *builders* as we say at the present time. We have distinct companies, such as the "Tylers' and Bricklayers'," the "Masons'," the "Plasterers'," the "Carpenters and Joiners'," the "Plumbers'," the "Painters'," the "Paper Stainers'," the "Glaziers'," the "Smiths'," the "Slaters'," the "Paviours'," &c.: whence arises, then, the *builder*; and why should one man amalgamate the whole of the trades, professing to understand the whole, when in many cases he knows little or nothing of any one of them. Time was, and now is, that it is presumed a seven years' apprenticeship is not too long to become fully initiated into the art and mystery of *one* of the trades only. If architects were to do as our forefathers did, have each tradesman to perform his own work, we should not see such enormous differences in the amounts of tenders as we occasionally do in your pages. Moreover, men should not be allowed to arrogate to themselves any one

branch of the building trade if they cannot produce vouchers of their knowledge and ability, and be fully qualified to perform the works they profess to be masters of; for at the present time we have men who call themselves builders, who have been fishmongers, barbers, tailors, butchers, brokers, dealers in second-hand building materials, &c.; and these forsooth are patronized by some architects. These *builders* have never had a tool in their hands, and know as much of the use of the plumb rule and level as a pig does of dancing. Such men are the ruin of the *trade*, professing to know all, but in fact knowing nothing. C. FOSTER.*

THE PROPOSED NATIONAL ALBERT MEMORIAL.

I AM neither an architect nor even an engineer, therefore the criticism that I am about to make on the proposed Albert Memorial, of which you gave an engraving on May 23rd, must not be attributed to professional jealousy.

When once a man has raised himself to the head of his profession, the British public is of so docile a nature that they seldom venture to form an independent opinion, thinking that whatever such a man propounds must be right. I, however, cannot help thinking that no architect should be considered in the light of an "*imperator supra grammaticam*," and that public opinion, in addition to professional opinion, might be advantageously brought to bear on the proposed memorial.

Every one must allow that one of the greatest of all defects in a structure is the appearance (even without the reality) of weakness and instability. Is not this the case in Mr. Scott's design? Is not the mass of the superstructure enormously disproportioned to the comparatively slender columns, which it seems to crush under its overpowering weight? Is one not, also, impressed with the idea of an uncompensated outward thrust against the heads of the columns?

I have always understood it to be a rule of Classic architecture that the contrast of plain and ornamented parts is essential for the production of a good effect, and that excessive ornamentation is a sin against good taste. Are not the same fundamental rules of good taste as applicable to Gothic as to Classic architecture? Is not the profusion of ornament carried to a vicious excess in the design before us, where in fact, with the exception of the shafts of the columns, not a square foot of plain surface is left in the whole building?

AUDAX.

HOUSES IN FLATS.

SIR,—For some years I have had frequent occasion to seek houses or apartments (for several months' occupation) in London or at the coast, for a family where, as is very often the case, the accommodation of four or five good-sized rooms upon one level has been extremely desirable. And to find these has been almost an impossibility. Only very high-rented "villa residences," or a few remaining old-fashioned and ill-built tenements requiring extensive repairs, can offer it; yet people seem ready enough to take these if they can afford the cost. They probably find that it is convenient to be able to move furniture without difficulty from one room to another; that the service of the house is conducted with less labour; consequently, fewer servants and greater economy; and the discomfort of having many flights of stairs in the house and between the various rooms, is recognised and felt in at least one out of four families.

I wish, therefore, to understand why this desideratum is not provided for the public? Why are only houses of "two and two up rooms," attainable by the majority of families? Why should not buildings with even seven or eight or more rooms, on one level, be procurable? The low-built villa is, of course, where ground is dear, too expensive for those who cannot afford 200*l.* per annum rent. But why cannot they have houses built in the Continental manner, with eight or ten rooms on each floor; shut off from the rest of the building, and forming a separate establishment? One house above another, in fact, instead of side by side. This has been done in Pimlico, in Victoria-street, and Ashley-place, and I hear with good results. I know personally three families living there, and they are all highly satisfied with their accommodation. On the contrary, I hear everywhere dissatisfaction expressed with our present usual houses, and a general testimony from the ladies of each family, that the stairs in London tire them, and waste their servants' time, and that the French system of building is more convenient. I hear continually the question, "Why are there not houses built like those in Victoria-street, in a healthier and more attractive part of London?" Would these buildings be more expensive to construct than other rows of houses? Is it more costly to erect a large building capable of being let in six single-floor houses, than six houses, side by side, with six double flights of stairs in each? Would not, indeed, some of the expenses be diminished, as the providing the service pipes, &c.? I should be glad if I could learn from the *Builder* that any such houses were now in progress in other localities besides Pimlico. I believe there are many ready to rent them. A LADY.

* This letter represents four others to the same effect.—ED.

WHAT IS A PROPER SUPPLY OF WATER FOR A PRIVATE HOUSE?

WILL any of your correspondents or readers who are competent to answer the question, kindly inform me whether or not water companies are compelled to supply any specified quantity of water per head daily to their ratepayers, and also whether landlords are bound to provide a proper cistern, receiver, or butt, to contain an adequate supply of water for the necessities of their tenants?

The point is one I think of general public interest, and I would illustrate it by my own individual case.

I pay heavy water-rates, but have not half sufficient water supply for the use of my family. My house is comparatively a modern one, but has hitherto only been occupied by three individuals. My family, with servants, consists of eleven. The slate tank to hold our water is 4 feet long by 3 feet wide, and 1¼ foot in depth from the mouth of the waste pipe; holding about 15 feet of water only for the drinking, cooking, and washing purposes of eleven persons, for the cleansing of two water-closets, and watering a garden. Of course the closets and garden get but a very poor share. This, however, is not our full average supply, inasmuch as no water comes in on Sundays, and the Saturday's supply has to serve for two days. My landlord says the tank served for the former tenants, in the aggregate three people, and it must serve for me. Although I live in a thickly-populated neighbourhood, I left my house this morning, a smart-looking one in a favourite spot, without one drop of water in the tank, and the only resources open to my family being the unpleasantness of borrowing from more fortunate neighbours, or waiting patiently the capricious rounds of the turncock.

I think tenants must have some remedy in such a case, and not be compelled to purchase their own tanks or endure the miseries of a half-civilized place. BIS DAT QUI CITO DAT.

ARE WE TO HAVE FRENCH OR ENGLISH GOTHIC?

SIR,—What you remarked about Italian Gothic in a recent number is applicable to French also. Everything Gothic done at this moment is French, or would-be French. The Gothic of France is very beautiful and expressive of French thought; but to transplant it to England is as absurd as to suppose the English language could ever convey the beauties of Molière, or French the character of the writings of Shakespeare. The noblest of distinctly manly traits is lost in this effete struggling after sensation by the use of strange forms. This French and Italian work only makes effect by its new appearances. It is new to the English eye,—strange. It does not please except by its novelty and strangeness. It is a "foreign sensation." English architecture ought to be English in spirit and appearance. To make it foreign is to show an utter disregard to our feelings, sentiment, landscape, habits,—in short, to our nationality; and I conceive it to be wanting in high noble feeling. It shows a want of love for national beauties and qualities. Surely an Englishman ought to be English. Surely England possesses a poetic charm of its own wholly opposed to Continental habits. Moreover, we can introduce all that is necessary, beautiful, and useful, without losing our own traditions; but modern works look like bad *copies* of French or Italian Gothic, and they show no English spirit,—they are not founded on English tradition. This columnar Italian brick architecture is not English. Before closing, one word about the future of sculpture. Our modern sculpture has no *life* in it: it wants "go:" it has no design. O. O. O.

COMPENSATION CASE.

THE TRUSTEES OF SHARP'S ALLEY ESTATE *v.* THE METROPOLITAN RAILWAY COMPANY.

ON the 27th ult. the compensation to be paid for the freehold property situate in Sharp's-alley, Cow-cross-street, was determined by a jury at the Sheriff's-court, Red Lion-square; Mr. Serjeant Hayes acting as assessor.

Mr. Hawkins, Q.C., appeared for the trustees; and Mr. J. H. Lloyd and Mr. Horace Lloyd for the Company.

The property is leased to four tenants, for terms expiring at different periods, and ranging from about four years and a half to twenty years.

Mr. Lewis H. Isaacs, surveyor to the trustees, estimated the value, including 10 per cent. for compulsory sale, at the sum of 10,079*l.* 17*s.* 6*d.*, made up as follows:—

Present value of unexpired term	£1,948	10	6
Present value of reversion of improved rental	7,215	0	0
	9,163	10	6
Add 10 per cent. for compulsory sale..	916	7	0
	£10,079	17	6

Mr. Peter Broad's estimate was 9,169*l.*: Mr. E. l'Anson estimated the value of the property at 10,237*l.*: Mr. Edmund Woodthorpe's estimate was 9,096*l.* 2*s.* 5*d.*; Mr. G. Perry's, 11,340*l.*; Mr. John Barnett's, 9,129*l.* 16*s.*; and Mr. Fenton's, 9,009*l.*

On the other side, Mr. Shaw, of Christ's Hospital, considered 6,101*l.* a fair value; Mr. Clarke, of the firm of Farebrother, Clarke, & Lye, gave 6,083*l.* as his estimate; Mr. Charles Lee, 6,563*l.*; and Mr. Penfold, 6,895*l.*

After a speech in reply to the evidence by Mr. Hawkins, the assessor left the case with the jury, who returned a verdict of 8,250*l.* for total compensation.

ARCHITECTS' ACTIONS.

Weblе v. *The Royal Dramatic College.—Dismissal of an Architect.*—The plaintiff in this case (Court of Common Pleas) was an architect, and he sued to recover a sum due for work done, and also damages for having been dismissed from the appointment of architect for building the Royal Dramatic College at Mayberry, near Woking. The defendants paid into court 36*l.* Is, and denied their liability beyond that sum. They also justified the dismissal of the plaintiff upon the ground that he had not obeyed the instructions given him.

The plaintiff's case was that, in 1859, the defendants issued a circular inviting architects to supply drawings for the Dramatic College; and it was stated that the successful competitor should be employed as architect. The plaintiff sent in drawings with the motto, "I'll win if I can," and his design having been accepted, he was appointed architect. He superintended the building of some of the almshouses; and in June, 1861, he prepared plans for the central hall, which he estimated would cost about 5,000*l.* or 6,000*l.* His counsel stated that various alterations were made in this plan at the suggestion of the Council; and, indeed, the plan was so altered that the cost of carrying it out would have been about 18,000*l.* This was a sum which the Council said they could not afford; and they passed a resolution dismissing the plaintiff as architect, but not stating any definite reason for so doing. The plaintiff had received 200*l.* or 300*l.* for work done, and the balance which he claimed was about 1,100*l.* more.

In the course of the trial it was suggested by the Judge (Byles) that the case was one which could not be satisfactorily tried before a jury, involving as it did a vast number of details. Upon this suggestion a consultation took place between the counsel, which, after about three-quarters of an hour, resulted in an arrangement being come to.

Mr. Hawkins (for defendants) said that his clients were very desirous that it should not be supposed that, in acceding to a reference they wished to avoid contesting the claim to the end. He was not instructed to say anything against Mr. Webbe as an architect; but they believed that they had a substantial answer to the action; and, indeed, they would not have come into court had they not been persuaded of this.

A verdict was, therefore, entered for the plaintiff, subject to a reference.

PATENTS CONNECTED WITH BUILDING.*

GLASS ROOFS AND ROOF-LIGHTS.—*O. J. & J. Showell.* Dated October 14, 1862.—This invention relates to a mode of constructing glass roofs or roof-lights in such manner as to render them water-tight without the use of putty or cement, and so that they may be capable of giving way to slight movements arising from expansion and contraction, and from other causes; and the invention consists in the use of glass sheets or plates with their two opposite parallel edges turned at right angles, or thereabouts, to the plane of the sheet or plate, and in arranging such sheets or

* Selected from the lists in the *Engineer*.

plates so that their turned edges will come together, the edges being placed either up or down. If upwards they are covered with a cap: if placed downwards they enter a gutter, the caps or gutters being made of metal or other suitable material.

ROTATIVE TRAVELLING CRANE.—*J. Wright.* A communication. Dated September 30, 1862.—This invention is carried out as follows:—On a stand or framing, of suitable weight and strength, the inventor places an engine and boiler, which, through a pinion on the main shaft, gives motion to a large cog-wheel fastened on the spindle of the drum, on which is coiled the chain passing from it to the extremity of the jib, and terminating in a hook or its equivalent in the usual manner. A tie-rod passes from the extremity of the jib to the extreme rear of the machine, by which means the weight of the boiler, engine, and machinery, counterbalances the weight of the substances or materials to be lifted. The whole apparatus turns on a circular rail round a pivot supported on a frame.

MANUFACTURE OF BRICKS, DRAIN, SANITARY AND OTHER PIPES, TILES, QUARRIES, &c.—*S. Holland.* Dated October 6, 1862.—This invention consists, essentially, in forcing the column of clay or other plastic substance through dies for the manufacture of bricks, pipes, tiles, and other articles of like manufacture, by hydraulic pressure, as described. Machinery constructed according to this invention is said to be especially suited to be worked by manual power, but can also be worked by steam or other power.

BEAMS, GIRDERS, BRIDGES, AND VIADUCTS.—*D. S. Sutherland.* Dated October 10, 1862.—The object of this invention is the construction of a beam, girder, bridge, or viaduct that shall be self-contained, while retaining the distinctive features of a suspension bridge, that is to say, the power exerted by means of the anchorage or otherwise in the maintenance of a suspension bridge is applied and diverted by the patentee in another form and direction, viz., within the structure itself. He effects this by means of a combination of compression or straining beams, and of suspension bars or tension rods.

CHIMNEY-TOPS.—*J. Durant.* Dated October 11, 1862.—This invention consists in forming the chimney-can so that its base may be either circular, square, or polygonal. The patentee does not claim anything new in form or construction. The upper portion of the stalk is encircled by a corrugated conical cap, the lower end of which, with the corrugations, cover, project over, and encircle the upper portion of the stalk, the upper part of the conical cap being of nearly the same diameter as the stalk, which it also encircles and rises above. On the outside of the upper portion of the conical cap is fixed another corrugated cap of rather smaller dimensions than the last mentioned. The effect of the corrugations of these caps is to form channels on the outside, which cause the exterior atmosphere to rush through the different channels upwards; and in like manner the air instead of passing downwards is carried off by the same chamber. Within a small rib or bar over the top of the can is suspended a double conical valve or float: the spindle of the valve passes through an eye or slip in the rib, and allows the valve to rise or fall. When acted upon, the diameter of the valve being less than the top of the can, the smoke reflected from its conical surface passes easily off, and similarly the down draught is carried through the corrugated channels of the comb: the brush in the cleaning of the chimney can also pass out at the top, the valve being raised up by it above the level of the mouth.

ROOFING TILES.—*E. Hooper.* Dated 28th October, 1862.—The patentee claims, first, the construction and employment of tiles or slabs having sunken channels upon their upper surfaces free from any rebate, shoulder, or raised portion that would prevent the tiles from lying close together on their general surfaces, which channels are more or less covered by the tile or tiles above them, and having further grooves formed on their under surfaces, which grooves fit exactly over the before-mentioned channels in the tiles beneath, thus forming drips over the same. Secondly, the construction and employment of tiles having channels and grooves, as described in the first claim, in combination with such a form of the tiles that the meeting corners of two contiguous tiles are cut off, so as to form meeting edges in which notches are made for intercepting the passage of the water, substantially as described. Thirdly, the construction and employment of tiles or slabs made or cut out of any suitable material, in which those corners that come in contact with other tiles or slabs lying in the same plane are cut off to such an extent as to afford the requisite amount of lap, so as to maintain the external edges of the tiles upon the roof in continuous lines; the particular shape, general formation, and arrangement of the tiles affording, at the same time, the most efficient covering and protection from the rain, with the least amount of lap, and without the necessity for stopping of any kind; thus insuring the greatest possible economy in weight and material.

MANUFACTURE OF BRICKS, TILES, SLABS, &c.—*G. Lindermann.* Dated 27th October, 1862.—This invention relates, first, to a method of bringing the clay or other plastic material into a condition for being moulded. For this purpose the patentee causes it to be forced through slits or other openings formed around the periphery of a cylinder, and through which it is again propelled, so as to be delivered to any convenient receptacle, or at once into moulds. When the articles are formed by being forced through moulds, and then cut off, he causes them to abut against a surface retained by levers, which, when the material has been severed, turns downward and deposits the moulded article on to a travelling apron or other such apparatus. Another part of the invention relates to the construction of hoppers for delivering plastic materials to rollers or other apparatus which are to operate upon it, and consists in forming the sides of such hoppers of travelling surfaces.

PURIFICATION OF LEAD.—*E. S. Tudor.* Dated 28th October, 1862.—This invention consists in subjecting the lead melted in a furnace, pot, crucible, or any other suitable vessel or apparatus, to the action of litharge or other oxide of lead in a state of fusion or semi-fusion.

COMPOUND OR MATERIAL FOR COATING OR COVERING METALLIC AND VEGETABLE SUBSTANCES TO PRESERVE THEM FROM CORROSION OR DECAY.—*C. S. Duncan.* Dated 28th October, 1862.—The patentee proposes to use marine glue, gutta-percha, india-rubber, shellac, copal, mastic, vegetable or mineral pitch, tar, resin, iodine, sulphur, creosote, or asphalte, bitumen, and coal tar, in combination with one or more of the following substances:—Alumina, schist, quartz, slate, silex, or flint, marble, or pozzolano, sand, sand stone, cement (natural or artificial), chalk, glass, emery, tripoli, white oxide of zinc or of lead, or the litharge or red oxide of lead, in every case reduced to a fine and nearly impalpable powder, in proportions varying from one-fourth part to five parts of these powdered materials to one part or more of the before-mentioned plastic substances. The materials are then to be heated, so as to reduce them to a plastic or semi-liquid state, and he also heats the metal or metals to be coated with the compound to a moderate temperature; and while in this heated state he lays on the coating with brushes or by any convenient method. Immediately after the coating has been laid on the metal, wood, or other body to be preserved, and before it is allowed to cool, the compound is to be covered with a layer of one or more of these mineral powders before mentioned in a warm state, in order to entirely remove all stickiness or tack. When the compound has become cool, the surface may be brought to a smooth or polished exterior by rubbing it with any ordinary substance used for rubbing down or polishing mineral or metallic surfaces.

Books Received.

Wills from Doctors' Commons: a Selection from the Wills of Eminent Persons, proved in the Prerogative Court of Canterbury, 1495—1695. Edited by JOHN GOUGH NICHOLS and JOHN BRUCE. Printed for the Camden Society. 1863. THIS is quite a new quarry of historical and literary interest, and one which will not be easily or soon exhausted. It is to Justice Cresswell that the public owe that permission which has heretofore been uniformly refused to all who desired to print or publish testamentary documents of literary interest; and to Mr. Nichols and Mr. Bruce for the Camden Society, that we are indebted for the first fruits of that permission. The present volume contains upwards of thirty wills of interesting men and women of old times, such as Sir Thomas Gresham, Sir Hugh Myddelton, Sir Peter Lely, Isaac Oliver, Sir Francis Drake, John Hampden, Prince Rupert, Cecily Duchess of York, Dame Maud Parr, &c.

The Camden Society, as well as the public, may be congratulated on the final success of the endeavours which the Society has for some years been making to render the materials for our social history stored up at Doctors' Commons available for literary purposes.

VARIORUM.

"THE Crystal Palace Penny Guide" contains the largest amount of interesting information, illustrated, that has ever yet been offered for that coin. It is worth more than the money even to one who may never expect to use it in the building. It is to be hoped it may serve to recal to the multitude the fact that the Crystal Palace was intended to be something more than a concert-room and tea-garden.——"The Halfpenny Time Table" has for motto "Single and Simple." The intention is to furnish the public with separate tables for all the important towns, giving the traveller all the information necessary for the journey he may wish to undertake, without the trouble of wading through a volume of time tables. It will serve many, but will not supersede "Bradshaw."——A Map showing the Sources of the Nile, as discovered by Captains Speke and Grant, has been published by Mr. James Wyld (West Strand). As in many other cases, now that the problem is solved, it seems strange that it remained so long in doubt. The unsettled condition of the country, and the various tributary streams which led inquirers off on either side of the real line will assist to explain it. One Lopez, a Portuguese, in the sixteenth century, seems to have pointed out as the source a lake in the position of that now called Victoria Nyanza, and which Speke and Grant show to be such; and the lake is shown in the atlas accompanying "Bowen's Complete System of Geography," published about 116 years ago. We are not disposed to regard this, however, as at all lessening the honour due to our countrymen.——"A Popoular Treatise on Photography; translated from the French of D. Van Monckhoven. By W. H. Thornthwaite. Illustrated. London: Virtue. 1863." We have no doubt a treatise by Van Monckhoven on photography must be a good one; but is it not remarkable that we should require to go to the Continent for such a treatise while we have men such as Fox Talbot,—and not a few of them,—of far more eminence in the science or art of photography than Van Monckhoven, amongst us?

Miscellanea.

THE SULTAN AND HIS PHOTOGRAPH.—A petition, covered with some 25,000 signatures, was lately presented to the Sultan at the Sweet Waters, by a deputation of sixty persons representing nearly every section of the native population of the capital; praying his Majesty to sit for his photographic portrait, that copies of it might be had for circulation all over the empire. Along with it was presented a short adjoint-petition, from the members of the *corps diplomatique*. His Majesty intimated his readiness to comply with the wish of the petitioners. Cartes of Sultan Abdul Aziz will now, therefore, be as plentiful as those of the most popular "subject" of the day.

ASSYRIAN DISCOVERIES.—M. Delaporte, the French Consul-General at Bagdad, has just made an archæological discovery on the banks of the Euphrates, not far from ancient Babylon, and close to the Jewish village of Kiffel. He has explored, at the funereal monument known for ages past by the name of Ezekiel's tomb, a sepulchral excavation serving as a series of tombs, and containing statuettes and other objects of admirable workmanship. M. Delaporte thinks that the burying-place is that of the family of a Greek officer in the reign of Alexander or one of his successors. Other tombs exist in the locality.

DRINKING FOUNTAIN. — A Gothic drinking-fountain, which has been erected by the Metropolitan Free Drinking Fountains' Association, in the Regent's Park, near Gloucester Gate, was opened to the public on the 6th. This fountain is the gift of Mrs. Henry Edmund Gurney, and was designed by Mr. Jackson, of Maida Hill, the sculptor who executed the fountain in St. James's Park, to which we have already alluded. We understand that this is the second fountain which has been presented by Mrs. Gurney. It is stated that nearly a quarter of a million people drink daily at the fountains already erected by the Association in various parts of the metropolis; but, notwithstanding the amount of good thus conferred upon the thirsty wayfarers of London, the Society is in absolute need of funds to enable them to carry on the movement.

MOVING A CHIMNEY.—A remarkable work has been accomplished at Worcester, Mass. The chimney-stack at the ironworks of Nathan Washburn, which is 100 feet high, having in it 60,000 bricks, and weighing 170 tons, was moved a distance of 150 feet and turned partly round, without the slightest accident, and not even a brick was dislocated?—*Commercial Bulletin.*

THE RAILWAY AND BRIDGE ACROSS THE MERSEY AT RUNCORN.—The works will now be vigorously proceeded with by Messrs. Brassey & Ogilvie, the contractors. Vessels have been discharged in the Bridgwater Docks, laden with working machinery and materials, and other vessels chartered. Oak trees standing on the proposed line have been felled, and a fine sycamore tree on Castle Rock, one of the most conspicuous ornaments of the town, has shared the same fate.

IMPROVEMENT IN PLATE-GLASS MIRRORS.—The scientific news from Russia tells us of the discovery of a means whereby the mercury used in the manufacture of looking-glasses may be so hardened as to be rendered defiant of humidity, friction, or blows. The plate-glass thus prepared may consequently be transported to any distance without fear of damage; and the silvering being accomplished by a cheaper process than any yet known, the glass is ten or twenty per cent. cheaper than at present.

PORTSMOUTH.—It has been resolved by the town council to adopt the Local Government Act for Portsmouth. The mover of the resolution, in the course of his remarks made special allusion to a court in the borough, known as Hope-place, in which sickness and death had continually occurred through the want of proper sanitary measures, and also made reference to the advantages derived by many towns in which the Act had been adopted, and amongst which he named Banbury, Weston-super-Mare, and other places, in all of which the rates had been limited, which could also be done in this town, in which he showed that 70,000*l.* could be immediately raised by only making a six-penny rate, and which sum would be entirely liquidated by the continuance of the rate for thirty years. He also called attention to the doings of the present Board of Outwards Commissioners, from whom he said that he should take a long farewell with an immense deal of pleasure. The majority in favour of the adoption of the Act was 43 against 8.

DISMISSAL OF CLERK OF WORKS AT CONSTANTINOPLE: PENNY WISE, POUND FOOLISH.—The House of Commons, in committee of supply on the civil service estimates, resolved to withhold the salary of the clerk of works at the palace of the British embassy at Pera, thereby voting against the Government by a majority of 74 to 68. The question was one of 400*l.*, which Mr. Cowper explained to be a higher salary than would otherwise be given, because of the great distance from home, and the consequent necessity and advantage of employing a gentleman of higher professional understanding and responsibility than the corresponding officer at Paris (the only other clerk of works connected with our embassies), whose salary was only 180*l.* Notwithstanding the efforts of Mr. Cowper and Lord Palmerston to make the majority understand the duties of a clerk of works, and the necessity for some check upon local tradesmen in repairing the palace, in order to prevent undue or improper expenditure, or scamping of work; the hon. members betrayed a strange stupidity and misunderstanding on the subject. One clear idea seemed to be that the clerk of works was intended by the Government to be a check—not upon the ambassador's building tradesmen, but upon the ambassador himself! and this being the idea, it was easy of course to show how absurd it was to imagine that a clerk could be any real check on so high a functionary. Another notion was that the clerk must necessarily spend as much as possible, otherwise his salary might amount to 100 per cent. on the amount expended, instead of the usual 5 per cent. of an architect! A zinc roof and some new furniture had been required as extras for the palace last year, it seems, at a cost of some 1,000*l.* or so: *hinc illæ lachrymæ.* The palace at Pera, by the way, is not merely the dwelling of our ambassador, but of all his officers and attendants as well. The Turkish painters, carpenters, plumbers, slaters, &c., will doubtless rejoice to hear that their natural enemy, the clerk of works, is to be dismissed; and if, without control or check or superintendence, they give good work at moderate prices, and only where and when such work is really needed, the Turks must indeed be an upright and honest, self-denying race, as well as a skilful.

THE SOCIETY OF ARTS' CONVERSAZIONE.—The council of the Society of Arts gave a *conversazione* on Friday evening, the 12th inst., at the Kensington Museum, which was numerously attended. A novel feature in the performances of the Artillery band was that of Mendelssohn's part-songs, "The Hunter's Farewell" and "The Summer Song," both admirably given, and a solo by Kücken, "Hie thee, Shallop." These evening gatherings are boons to a large number of persons.

THE ARTISTS' BENEVOLENT FUND.—The anniversary dinner of this excellent institution was held on Saturday night, 13th inst., in the Freemasons' Tavern. The chair was occupied by Mr. W. B. Beach, M.P.; and the company included Mr. Roberts, R.A., Mr. Foley, R.A., Mr. Doo, R.A., Mr. Humphreys, and a number of other gentlemen connected with art. The annual report of the committee states that, since the establishment of the fund, the sum of 24,721*l.* 2s. 3d. has been distributed in relieving the widows and orphans of British artists, and that fifty-three widows have received annuities during the past year amounting to 765*l.*, and fifteen orphans the sum of 61*l.* 5s. Mr. Dimond, the hon. secretary, announced that the subscriptions received amounted to 542*l.*

ACCLIMATIZATION OF ANIMAL AND VEGETABLE PRODUCTS.—The third annual report of "the Society for the Acclimatization of Animals, Birds, Fishes, Insects, and Vegetables within the United Kingdom," has been printed [Offices, 3, Duke-street, Adelphi, London]. We are glad to see from this report that this much-wanted Society is making rapid progress in that acquisition of members on which its future utility and fame must be based. At the period of the last annual meeting the number of annual subscribers was 48, and of life members, 24: at present there are 139 annual subscribers and 46 life members,—a clear increase of more than 135 per cent. per annum. The Society is already in active working order as regards the importation of useful and interesting animal and vegetable products of other countries, such as Chinese sheep, Japanese and other deer and fowls, Honduras turkeys, prairie grouse, and Virginia quails. Pisciculture also is in progress, and we hear that a company for the propagation of salmon, oysters, &c., is being formed. A method of safely transporting salmon ova to Australia has now been discovered;—that is, encased in ice; but how the ice withstands the heat of the tropics we do not know. Silk-worms are also occupying the attention of the society; and, in the vegetable world, Chinese yams, arrow-root, bunch grass, and Lima beans.

THE MAGNETO-ELECTRIC LIGHT AT DUNGENESS.—Some further reports on the progress of this "magnificent" light, as a committee of the Trinity House have called it, have been printed by order of the House of Commons. In one, dated 8th April, 1863, the secretary says:—"The light has now been exhibited at Dungeness for a period of nine months; and during that time has, with some brief exceptions (generally attributable to want of care on the part of the attendants), been maintained without break or failure, showing a light of exceeding power and intensity, which Mr. Faraday, who took as his standard the revolving light at Grisnez, with which, at equal distances it was of equal power, estimated to be eight times that of a first order fixed dioptric light (see his report No. 1). Every part of the machines and engines has worked well, although one of the boilers has just required repair, causing a pressing demand from the engineer for the third spare boiler, which he has suggested as necessary. The lamps and lenses have been gradually improved until they may now be said to be perfectly satisfactory, and have been under the charge of the ordinary light-keepers, possessing no more than the usual ability of such persons. The engines and machines have been under the charge of two engineers." Various minor objections, however, to the light as it exists, are stated in these reports; but some of these are vitiated by the discovery that the chief engineer has had to be dismissed recently on account of intoxication. Professor Holmes replies satisfactorily to the objections in a separate pamphlet, and Professor Faraday also discusses some of them. The light seems to be visible at from twenty to thirty miles' distance, but occasionally not so far, a circumstance which Professor Faraday ascribes on certain occasions to local haze. The Trinity House authorities, however, admit the superior advantages of the light in respect to penetrative power and star-like brilliancy, although other first-class lights they regard as practically sufficient.

ANTIQUITIES.—The *Korrespondent von und für Deutschland* contains the following interesting notice from Turin:—"The excavations at Pompeii are carrying on most actively. A few days ago, a cradle was found, constructed exactly after the same swinging system in use now throughout Europe. Besides this, there were brought to light gladiators' fights, popular games, battles, &c., carved in wood, and moveable through an ingenious but simple mechanism. These exemplify better than any drawing the details of the motions, the tactics, and the mode of warfare, and also the extraordinary dexterity of the gladiators. This find has created a very great sensation."

MEMORIAL OF CANON LEVINS AT ARDEE.—It has been resolved to carry out the following recommendation of Mr. J. J. M'Carthy, architect, whom the committee consulted, as to a memorial of the late Canon Levins, of Ardee:—"I recommend that the memorial to the late Very Rev. John Levins consist of a chancel, to be erected behind the altar of the present chapel, and opening into it by a large chancel arch; also a suitable high altar and reredos. The window over the present altar could be removed and placed over the altar in the chancel. I would recommend, moreover, that the remains of Father Levin should be removed to the centre of the chancel, and a monumental brass laid in the floor marking the exact place of his sepulture. An inscription should be also placed in some convenient and appropriate part of the chancel, stating that the entire chancel, its furniture and decorations, are the monument of the late Very Rev. Canon Levins, erected by his parishioners."

THE CLIFTON SUSPENSION BRIDGE AT BRISTOL. The wire coils of the temporary bridge necessary for the construction of this work have been passed across the Avon. A thin rope was lowered from the Clifton buttress, and the end conveyed across the river in a boat to the Leigh side, and then attached to a thick hawser, which was hauled across and secured. The first of the wire coils, 1,100 feet in length, and weighing two tons, was then successfully suspended across the chasm at St. Vincent's rocks, under the superintendence of Messrs. Cochrane & Airey. Nine coils of this kind having been suspended, a strong cradle will be attached to two of them and swung down to the centre of the chasm, and in this the workmen will commence bolting the planks for the platform, gradually completing this stage as they near the inclines, the declination of which is about 1 in 2½. This platform completed, a "traveller" will be attached to one of the wire cables; and the chains, &c., will be conveyed to any part of the platform, above which the suspension-bridge will be erected. Looking up at the men at work, a few days ago, their position seemed critical.

MEAT MARKET, SMITHFIELD.—COMPENSATION. From a report of the proceedings of the Markets Improvement Committee of the Corporation, relative to their proceedings under the "Metropolitan Meat and Poultry Market Acts, 1860 and 1862," made up to the 16th of April last, we learn that of the thirty-seven freeholders' claims thirty-five were submitted to reference, one was settled by agreement, and one by a verdict in the Lord Mayor's Court, that claim having been considered of an exorbitant character, and the claimants refusing to submit to arbitration. The whole of the eight claims of joint leaseholders and occupiers were arranged by agreement, as also were the remaining fifteen claims for compensation of occupiers only. Of the freeholders' claims, but one party obtained the amount claimed, the remainder having been agreed to at an average of about two-thirds of the sums asked for as compensation. The joint claims of leaseholders and occupiers were disposed of for less than one-half the amount charged, as also were those of the occupiers only. Subjoined we give a summary of the claims settled:—Freeholds—claims amounted to 100,316*l.* 5s. 10d.; settled, about 60,931*l.* 10s. 3d. Leaseholds—5,349*l.* 19s. 3d. claimed; settled at 4,249*l.* 12s. 9d. Leaseholders and occupiers—claims, 15,753*l.* 19s. 8d.; settled at 7,180*l.* And occupiers only — claims, 2,897*l.* 12s. 1d., settled at 1,170*l.* 10s. Total claims, 124,317*l.* 16s. 10d.; settled for about 75,531*l.* 13s., or about 11,372*l.* 15s. 7d. more than half the total amount claimed by the sixty-three claimants. The largest claim was 17,626*l.*, the settlement being by verdict, arbitration being declined, when the amount of the assessment by the jury was only 9,200*l.*, namely, 8,650*l.* for the property and the payment of a rent-charge of 20*l.* a year valued at 550*l.* The lowest amount of claim was 10*l.*, and that sum was paid to the claimant by agreement.

STEAM TRUMPETS.—A good deal has been said lately in London about "steam trumpets" as a mode of signalling on railways. It appears that these instruments are the invention of a Dr. Upham, of Boston. About a year ago he obtained the use of two locomotives for the purpose of an experimental talk by the sounds of the steam-whistle. The inventor had attached several contrivances to the whistle in the shape of bells, trombones, and clarionets; and by means of these he was enabled to represent the sounds of the alphabet by very different sounds. He found that by their means he could convey a message to a distance of three miles, which could be heard and understood even amid the more immediate sounds produced by the movement of a railway train. The doctor has, it is said, found it possible, by the simple trumpet, to transmit any message, however long or complicated, the distance of a mile. So far as the public ear is concerned, anything would be preferable to the present diabolical screech of the iron horse.

A METROPOLITAN MAIN TRUNK UNDERGROUND RAILWAY.—A project is suggested by Mr. Charles Baylis, of the Poultry, for constructing a Main Trunk Underground Line of Railway, to commence at Stratford, to be carried down the Bow, Mile-end, and Whitechapel-roads, through the City, down Holborn, Oxford-street, and Bayswater-road, and to terminate at Shepherd's Bush. In connexion with the construction of this line of railway, it is also suggested that four lines of rails at the least should be made, and chambers should also be constructed for depositing gas and water-pipes, telegraph-wires, &c., and for any other purposes that may be considered advisable. It is concluded, that if such a railway were constructed, legislative interference would almost become unnecessary, as every other railway company would have but one object in view; namely, to arrange the best modes of bringing their traffic on the line now proposed. Would not the necessity of crossing the Thames by a north and south line of underground railway, however, make this latter line more like the criterion or key to the level of all the other lines than an east and west one?

YORKSHIRE ARCHITECTURAL SOCIETY. — On Tuesday, the 9th instant, this Society paid a visit to Halifax. There were about sixty members and friends present, a considerable portion of them having been brought by a special train from York *viâ* Leeds. They met in the saloon of the New Assembly Rooms, Halifax, where they were joined by the mayor (Mr. John Crossley), Colonel Akroyd, and a number of the members of the Halifax Literary and Philosophical Society. A paper was read by Mr. P. O'Callaghan, of Leeds, on "The Primæval Architecture of the British Islands." The Society then adjourned, and proceeded to inspect the Piece Hall and the Halifax parish church. Here a paper was read by Mr. F. A. Leyland, Halifax, on "The Antiquities of Halifax, and the Church of St. John the Baptist, Halifax." The party next viewed the new Town Hall, the splendid buildings in Crossley-street, Princess-street, and Crown-street; All Souls' Church, All Souls' Cemetery Chapel, &c.; and then were entertained to luncheon by Colonel Akroyd, at Bank Field.

DUBLIN EXHIBITION PALACE AND WINTER GARDEN.—The Lord Lieutenant laid the first stone on the 12th inst. In the course of his reply to an address presented to him, his Excellency said,—"I rejoice sincerely that among the multiplied instances of the increasing enterprise and improving taste of this committee,—among the number of ecclesiastical, collegiate, municipal, and commercial structures which rise on every side of us,—one spot should be set apart for bringing rational and refined entertainment within the reach of all classes, and adding to the public stock of blameless amusement. It will, indeed, be the best, though we do not wish it to be the only, reward of the friends and patrons of this enterprise, when they shall be enabled to see large numbers of their fellow citizens, with their wives and families, issuing, perhaps, from humble homes, and closing the labours of the counter and the factory in the unrebuked enjoyment of the beauties of nature and the treasures of art. The list which your address presents of the varied attractions which are to be gathered in this favoured spot portrays an enchanted scene, where Flora is to girdle the shrine of every Grace and every Muse. I feel, however, that we have no need to resort to fable or to fancy when we find our undertaking fostered and supported by the genial patronage of Leinster, the untiring benevolence of Guinness, the practical energy of Dargan. May the blessing from on High allow, prosper, and hallow our work!" Amen! say we, of London.

PARIS EXHIBITION.—At the Palais de l'Industrie the Exhibition of Industrial Arts is to be held on the 15th of August next. The applications from exhibitors have been unusually numerous. The upper story of the building will be reserved for the retrospective museum for industrial artists, and for works of artistic competition; while the grand nave, arranged as a garden in the French style, will be devoted to specimens of manufacture and objects of the constructive arts.

THE LATE LORD HERBERT.—A monument in marble, the work of Mr. Phillip, of Vauxhall Bridge-road, has just been placed in the parish church of Wilton, to the memory of the late Lord Herbert of Lea. The monument consists of a recumbent figure with clasped hands, resting on a tomb, with two angels at the head. The figure, an excellent likeness of his lordship when young, is admirably carved; and around the top of the tomb is a brass with the following inscription:—"Sidney, Lord Herbert, second son of George Augustus, eleventh Earl of Pembroke, born 16th September, 1810; died 2nd August, 1861. Blessed are the dead which die in the Lord; they rest from their labours. Founder of this church. *In pace.*"

DESTRUCTION OF WELBECK ABBEY TOWER BY LIGHTNING.—For some time past workmen have been employed in altering Welbeck Abbey, Notts, the seat of the Duke of Portland, and on Saturday last a storm of a serious character visited that place. About one o'clock at noon the storm was raging at its height, and a thunderbolt descended upon the tower, striking it with such force that the four-dial tower clock was completely demolished and old Welbeck's tower split down, the report of thunder and the fall of the old pile causing great alarm among the workpeople. There have been several severe thunder-storms in Nottingham and the surrounding neighbourhood during the last week or two, and vegetation generally has been greatly benefited.

THE LARK NAVIGATION.—The report of Mr. Burnell, C.E., on the project for re-opening this navigation, has been received, according to the *Bury Post*. Mr. Burnell is fully of opinion that the undertaking would be successful in a commercial point of view, and that it is just what the town requires to revive its trade. The old system of cloughs and staunches will be abandoned; and the depth of the water produced by them will be compensated for by the bed of the river being lowered. The number of locks between this town and Mildenhall will be reduced to thirteen, with falls varying from 4 feet to 7 feet 6 inches. The whole cost of the improvements, including the extension of the navigation up to the town, with docks, &c., is estimated at 18,000*l*.

DONCASTER.—The new Wool and Cattle Market is to be opened on the 6th of June. This structure has been erected at the expense of the Corporation on the site of some dilapidated buildings at the angle of the Corn-market with the Parsonage yard. The new erection is in unison with the architectural design of the covered Corn-market. It covers an area of 1,866 yards, being 140 feet in length, and 120 feet wide, which is nearly three times the size of the covered Corn-market. The area of the building is divided into three parts by four rows of metal pillars, which support upon perforated cast-iron girders three pitched roofs, similar to those seen in railway stations, and the centre one of which contains a skylight. The span of each roof is 40 feet. Altogether the roof stands upon 37 pillars, which run in rows of eight lengthwise and seven crosswise. There is a uniform distance of 20 feet between each pillar. The pillars are hollow, and act as water conductors. An ornamental moulded spouting skirts the roof, forming a cornice to the eaves. The new building is open to the Corn-market, but is enclosed by high iron palisades. The principal entrance is from the Parsonage-yard. The interior of the building is to be provided with portable iron sheep-pens; so that, apart from the wool season, it will be devoted to the purposes of a cattle-market. The cost of the whole will be about 1,500*l*. The contractors have been Messrs. T. & C. Anelay, of Doncaster, for the brick and stone-work; Mr. Wooller, of Laister Dyke, near Bradford, for the iron-work; Mr. J. Hill, of Bradford, the slating; Mr. Harrison, of Doncaster, the wood-work; and Messrs. Marrison & Marshall, Sheffield, the plumbing. Mr. Butterfield, the corporation steward, aided by Mr. Anelay, his clerk, have personally superintended the prosecution of the building, which may now be said to be finished, with the exception of a small part of the slating, and asphalting the floor. The design was by Mr. Butterfield.

TENDERS.

For three model cottages at Croydon, Surrey, for the Rev. Mr. Fitzwigram. Mr. J. Taylor, architect:—

Deacon	£495 0 0
Dover	475 0 0
Nine	465 0 0
Pollard	460 0 0
Goden	379 0 0
Evans	365 0 0

For three shops in Tooley-street, for Messrs. Findlater & Co.:—

Powl	£1,929 0 0
Rawlings	1,891 0 0
Sawyer	1,845 0 0
Brighton	1,837 0 0
Newman & Mann	1,808 0 0
Colls	1,724 0 0
Downs	1,662 0 0
Brass	1,553 0 0
Coleman	1,439 0 0

For alterations for the Gas Meter Company, Kingsland-road. Mr. William Lee, architect:—

Kirk	£4,777 0 0
Simms	4,448 0 0
Hardiman & Sandon	4,328 0 0
Hill, Keddell, & Robinson	4,275 0 0
Perry	4,2 0 0 0 0
Fish	4,148 0 0
Maeers	3,995 0 0

For residence at Leamington, for Mr. J. Furnival. Mr. A. Johnson, architect. Quantities supplied:—

Marriott	£2,689 0 0
Hardwick	2,669 0 0
Briggs	2,550 0 0
Gascoyne	2,544 0 0
Ramsay (accepted)	2,495 0 0

For building a warehouse at Worcester for Mr. John Morton. Mr. George Truefitt, architect:—

Wilson	£746 0 0
Wood & Son (accepted)	520 0 0
Hemming & Son (too late)	494 6 6

For two semi-detached villa residences, Nottingham-park. Messrs. Hine & Evans, architects:—

Hill	£1,825 0 0
Ward & Co.	1,674 0 0
Simpson & Lynam	1,655 0 0
Barker	1,643 0 0
A. & R. Dennett & Co.	1,598 0 0
Willimott (accepted)	1,595 0 0

For rebuilding the nave and vestry of the church of St. Giles, Darlton, Notts. Messrs. Hine & Evans, architects:—

Lee & Tomlinson (accepted)	£537 0 0

School-house for Lady Sitwell, Renishaw, Derbyshire. Messrs. Hine & Evans, architects:—

A. & R. Dennett & Co.	£545 0 0
Lee & Hopkinson (accepted)	699 0 0

For the erection of a villa residence at Sonning, Berks, for Mr. C. H. Witherington. Mr. W. Brown, architect:—

Kendell	£1,123 0 0
Day	949 0 0
Dodd	925 0 0
Wheeler	920 0 0
Scarle	859 0 0

For the erection of a model Homestead, at Rose-hill, Oxon, for Mr. T. Rogers. Mr. W. Brown, architect:—

Matthews	£2,900 0 0
Day	2,821 0 0
Lawrence	2,768 0 0
Wheeler	2,750 0 0
Woodroffe	2,725 0 0
Kendell	2,446 0 0

For the erection of stabling at Farnborough, Hants, for Mr. W. Knell. Mr. W. Brown, architect:—

Edwards (accepted	£300 0 0

For taking down and rebuilding residence at Creek Mill, Batterses, for Mr. Denny. Mr. Charles Bowes, architect. Quantities supplied:—

Adamson & Sons	£689 0 0
Bass	670 0 0
Thornton	663 10 0
Lathey, Brothers (accepted)	648 0 0

For additions to Messrs. Lambert's factory, Nottingham. Mr. R. Clarke, architect. Quantities furnished:—

Brassington	£6,130 0 0
Ward, Ansell, & Co.	5,600 0 0
Fish	5,498 0 0
Dennett	5,199 0 0
Willimott	5,183 0 0
Dawson	5,025 0 0
Acton	5,010 0 0
Wright	4,942 0 0
Claycoot	4,900 0 0
Rushworth	4,859 0 0
Haw & Woolf (accepted)	4,699 0 0

For the excavator's, bricklayer's, mason's, and slater's work, to be done in the erection of a residence in the Beulah-road, Tunbridge Wells, for Mr. George Diggens. Mr. James Blundell, architect:—

Walker	£358 7 6
Hammond	340 10 0
Plasterer's Work.	
Mason	145 10 0
Twort	140 10 0

For detached residence at Hornsey. Mr. J. W. Reed, architect. Quantities supplied:—

Bond	£1,305 0 0
Mann	1,293 0 0
Glenn	1,284 0 0
Sleap	1,248 0 0
Hill & Son	1,247 0 0
James & Ashton	1,213 0 0
Carter	1,197 0 0
Sale	1,185 0 0

For extension of Southport Pier, &c.:—

Campbell, Johnson, & Co.	£5,000	0	0
Hardyside & Co.	3,963	10	0
J. & J. Cliff	3,133	5	7
W. & J. Galloway (accepted)	3,000	0	0

For additions to residence, No. 83, High-street, Guildford, for Messrs. G. W. & F. A. Crooke. Mr. Henry Peak, architect :—

T. & J. Loe	£1,112	0	0
Strudwick	1,102	0	0
W. Mason & Son	1,093	0	0
Pollard	1,010	0	0
Wadey	974	0	0
Smith	970	0	0
Beagley	914	10	0
Garnett (accepted)	890	0	0

For works to mansion, &c., at Burwash, Sussex. Mr. E. Habershon, architect :—

Bagucly	£2,736	0	0
Simms	2,399	0	0
Constable	1,750	0	0

For two houses in Oakley-street, Chelsea :—

Jennings	£2,630	0	0
Simms	2,106	0	0
Robson	2,025	0	0
Kilby (too late)	1,946	0	0
Dabbs	1,840	0	0
Gray	1,690	0	0
Avery (accepted)	1,525	0	0
Marshall	1,300	0	0

For alterations, &c., at 27, Montague-square. Mr. H. S. Joseph, architect :—

Hackforth	£698	0	0
King & Son	598	0	0
Newman & Mann	562	0	0
Clarke & Mannooch (accepted)	549	0	0

For the erection of a warehouse in Commercial-street, Whitechapel, for Mr. M. Levy. Mr. H. H. Collins, architect :—

Fish	£2,790	0	0
Newman & Mann	2,745	0	0
King & Sons	2,590	0	0
Stapp	2,565	0	0

Tender for erection of a warehouse, Saracen's Head-yard, Aldgate, for Mr. Whorlow. Mr. N. S. Joseph, architect :

Newman & Mann	£1,715	0	0
Ennor	1,689	0	0
Lawrence & Sons	1,634	0	0
King & Sons	1,580	0	0

Coast Guard Station, Sheerness.—The Lords of the Admiralty have accepted the tender of Mr. Simms for this work. The amounts are not made public. They have also accepted the same contractor for a station near Rye.

TO CORRESPONDENTS.

"*Colour of Furniture.*—A correspondent, "T." is anxious to know if any who can inform him how the peculiar tone of colour for rich modern continental furniture is obtained.

R. P.—B. & Co.—C. D.—A.—W. W.—J. E. R.—One interested in the competition—T. O. G. B.—E. B. (apply to Registrar in Office).—J. D.—H. T. E.—Mrs. M. B.—O. H. H. (letter has been forwarded).—Reparatus.—Minster Church.—S. D. W.—H. P.—R.—J. H.—M. C. J.—J. W. R.—J. B.—Mr. S. (should send architect's name).—T. & A.—G. V.

We are compelled to decline pointing out books, and giving addresses.

All statements of facts, lists of tenders, &c., must be accompanied by the name and address of the sender; not necessarily for publication.

NOTE.—*The responsibility of signed articles, and papers read at public meetings, rests, of course, with the authors.*

All Advertisements cannot be received for the current week's issue later than FIVE o'clock, p.m., *on Thursday.*

NOTICE.—*All Communications respecting Advertisements, Subscriptions, &c., should be addressed to "The Publisher of the Builder," No. 1, York-street, Covent Garden. All other Communications should be addressed to the "Editor," and not to the "Publisher."*

THE *Morning Post*, of September 29th, when describing Benson's Great Clock in the Exhibition, says: "The large clock in the centre transept is a fine piece of mechanism, one of the largest chiming." Benson's new show-rooms contain clocks designed by the first artists of the day, and include clocks for the drawing-room, dining-room, bed-room, library, hall, staircase, bracket, carriage, church, turret, railways, warehouse, counting-house, with musical, astronomical, and every description of clocks, from the plainest to the highest quality of which the art is at present capable. Church and turret clocks specially estimated for. Benson's Illustrated Pamphlet on clocks and watches (free by post for two stamps), contains a short history of clock and watch making, with descriptions and prices; it acts as a guide in the purchase of a clock or watch; and enables those who live in Scotland, Ireland, Wales, the Colonies, India, or any part of the world, to select a clock.—J. W. Benson received a Prize Medal and honourable Mention.—33 and 34, Ludgate-hill, London. Established 1749.—[Advt.]

ADVERTISEMENTS.

About 13,000 feet of Mahogany, and above 3000 lots suitable for the Building Trades

MESSRS. LEREW & LEREW will SELL by AUCTION, on the PREMISES, Camden terrace, Camden Town, on MONDAY, JUNE 29th, at TWELVE for ONE, 40 Lots of MAHOGANY, 2,500 yellow, white, and pine planks, deals, and battens, flooring, quartering, die square, birch, cut stuff, four panel doors, slating battens, pantile laths, poles, ladders, &c.—Auction Offices, 2, Cardington-street, Hampstead-road.

Have now ready their Builder's Price List Book for 1863, price 2s. 6d. containing the Price of all building materials, timber, slates, ironware, tiles, stone, glass, &c. &c. made up and corrected to the present date. The book contains sundry designs and useful calculations for builders generally.
The price is 2s. 6d. to those who have no account open with W. D. & Co.; but persons desirous of opening an account, on giving satisfactory references, can have a copy posted free.
Prices Current of Timber and Deals are issued monthly, and may be had on application.

LAND TO BE LET, for building villas of a respectable class, at Headley, Middlesex, four miles from the Regent's Park. The estate is freehold, and comprises 60 acres. To a responsible party money would be advanced as the buildings progress. For particulars apply to CHARLES FREEMAN, Esq. 9, Lincoln's Inn-fields, W.C.

BUILDING LAND TO BE LET, at Canonbury (Marquess-road), at Lower Norwood, a most eligible site, commanding beautiful views, close to the station; at Croydon, &c. Also at Edward's road, Bow, some carcases for completion. The usual advances of money to respectable parties.—Apply at the Offices of Mr. J. EDMESTON, Architect and Surveyor, 5, Crown-court, Old Broad-street, E.C.

WOODFORD RAILWAY.—The GROVE, WANSTEAD.—Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Shoreditch Station is 40 yards only from the Estate, and the City is reached in twenty-five minutes. The Leases will contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Blackheath, Tottenham, Kingston; some very eligible SITES in the Grove-road, Mile-end, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 25, Cannon-street.

CITY of LONDON.—BARBERS' HALL. TO BE LET, on a Building Lease, Nos. 33, 34, and 35, Monkwell street, Wood-street, and a portion of the Court yard Hall and Offices in the rear.—For particulars and plans, apply at the Beadle, at the Hall; or to the Clerk, HENLEY GROSE SMITH, Esq. 4, Warnford court, Throgmorton-street, E.C.; or to Mr. C. J. SHOPPEE, Architect, 61, Doughty street, W.C.

FREEHOLD LAND TO BE SOLD or LET on Building Leases.—Two Acres near Forest hill Railway station, One Acre adjoining Norwood Railway-station; Three Acres at Shortland Grove-road, Old Kent-road.—Apply to Mr. MAY, Acorn Wharf, Old Kent road.

TO BE LET, a capital WHARF and DRAWDOCK, known as "Searle's Wharf," most eligibly situated at the foot of New Westminster Bridge, and opposite the Houses of Parliament.
This dry-dock has been closed for some years, and is now about to be re-opened.
From its excellent situation and the probability of the Scotland-yard Wharf's being closed at an early date by the Thames Embankment, a very valuable business may no doubt be depended on.
A residence is attached, which may or may not be taken with the wharf or dry-dock.
Apply to Mr. W. HEWETT, 84, York-road, Lambeth.

LAND, situate on Bromley-hill, Kent, TO BE LET on Building Lease, suitable for the erection of villas for residence or investment, they being a great demand in that locality. The Land is within ten minutes' walk of the Shortlands Station, and in a beautifully wooded district. The site is elevated, it has a sub soil of white sand and dry gravel, and a supply of very fine spring water.—Apply to JOHN WIMBLE, Esq. 2, Walbrook, E.C.

WANTED, PREMISES suitable for a small BUILDING TRADE, in the City or contiguous, but must be within two miles' radius east of St. Paul's. Locality no object; and if same trade a small stock might be taken at a valuation. Address, A. Z. Dawson's Advertising Offices, 74, Cannon-street, City.

WOODFORD.—PLOTS of BUILDING GROUND TO LET, on the Grove Estate, within five minutes' walk of the George Lane station, close to the church, and twenty minutes by rail from Fenchurch-street; lies high and dry; water supplied by East London Water Company.—Apply to the freeholder, WASHINGTON BINGLE, Esq. the Grove, Woodford. Money advanced.

BUSHY PARK ESTATE.—Teddington.—Near the New Railway Station.—TO BE LET, on the Main road, at 3s. per foot frontage, with a depth of 250 feet, several beautiful plots of FREEHOLD LAND, for the erection of Villa Residences. This estate overlooks Bushy Park, and is surrounded by majestic trees.—For further particulars apply to Messrs. R. KENYON & CO. Auctioneers and Land Agents, 11, Ashchurch-lane, City.

NEW KENT ROAD, DOVER PLACE.—Saint Bartholomew's Hospital.—TO BE LET, from LADY-DAY next, on Repairing Leases for twenty-one years, the HOUSES numbered 96 to 97, inclusive.—For further particulars apply at Mr. HARDWICK'S Office, No. 1, Henrietta-street, Cavendish-square. Tenders are to be sealed up and delivered at the Clerk's Office, within the Hospital, on TUESDAY, the 14th day of JULY next, at a Quarter before ELEVEN precisely. WILLIAM WILBY, Clerk.
St. Bartholomew's Hospital, June, 1863.

WANTED, within one mile of the Royal Exchange, to PURCHASE, on a Long Lease, LAND or TENEMENTS, containing an area of about 6,000 feet, with a frontage in a leading thoroughfare of about 40 feet.—Particulars to be addressed to JOHN GRIFFITH, Esq. Architect, 16, Finsbury-place South, E.C.

CAPITAL FACTORY & WAREHOUSES, of Three lofty Floors, with an excellent Residence, all of modern erection, in Great Queen street, Lincoln's inn, extending to Parker-street, and covering an area of nearly 3,000 feet, TO BE LET on LEASE from the freeholder.—For terms apply to Mr. BULLOCK, Land Agent and Auctioneer, 211, High Holborn.

FREEHOLD BUILDING LAND in SURREY, on the High Road from Kingston to Dorking, two miles and a half from Leatherhead, and three miles and a half from Surbiton Stations, and one mile and a half from Epsom. Frontages 1,000 feet, and 470 feet; contain 6 acres and a half. Charming country. TO BE SOLD or LET on LEASE.—For terms apply to Mr. BULLOCK, Land Agent and Auctioneer, 211, High Holborn.

FREEHOLD LAND TO BE LET, on Building Leases, at low ground-rents, on the Estate of the Carpenters' Company, at Stratford, Essex, close to the Station and the High-street; one portion with river frontage, for the erection of manufactories, and another for small houses or cottages.—For plans and particulars apply at the Clerk's Office, Carpenter's Hall, London-wall; or to W. W. POCOCK, Architect and Surveyor, 35, Craven-street, Charing-cross.

PREMISES, containing 110 feet frontage, near Cavendish-square, TO BE LET on LEASE, or the LEASE SOLD, suitable for a builder, or any manufacturing business requiring space, with Three Houses and Three Shops, in a first-rate situation, with Stabling, and immediate possession.—To view, apply to Mr. GIBBONS, Old Cavendish-street.

BUILDING LAND, UPPER NORWOOD, close to the Crystal Palace.—TO BE LET, for the erection of small VILLAS, a class of residence much needed, and certain to let before completed. Advances if required.—Apply to Mr. T. K. GREEN, Architect, 25, College-hill, Cannon street, E.C.

A SMALL PLOT of FREEHOLD LAND, at WOOD GREEN, Tottenham, to be LET on Building Lease, or SOLD. Fronts, 25 feet by 87 feet depth. Near the Wood Green station.—Particulars of F. A. HANCOCK, 37, Wood-street, Cheapside.

HENLEY-ON-THAMES.—BUILDING GROUND on the Banks of the Thames.—TO BE LET, on Building Lease, THREE PLOTS of GROUND, immediately adjoining the new road by the river side leading from Henley to the Great Western Railway Station. Two of the Plots have a frontage to the river of 117 feet and a depth of about 110 feet, and the other a frontage of 52 feet and a depth of 96 feet. The land is most beautifully situate, and commands extensive views of Park Place and the River, offering advantages for building first-class villa residences seldom to be met with.—Full particulars may be had of Messrs. COOPER, Solicitors, Henley-on-Thames; and Messrs. HEWS & SON, Estate Agents, Henley-on-Thames.

PAPIER MACHE AND CARTON PIERRE WORKS,
49, RATHBONE PLACE, W.
GEORGE JACKSON AND SONS
(Established in 1780)

Beg the attention of Architects, Builders, Decorators, and the trade in general, to their large assortment of Enrichments for Ceilings and Cornices, in the Gothic, Elizabethan, Italian, Renaissance, Louis XIV, XV, XVI and many other styles; also rich or simple Panel Decorations, Elizabethan and Gothic Dados, Door Caps, Mouldings of all sizes, and to their varied selection of Centre Flowers for Ceilings, Gothic Bosses, Trusses, Cornice and Pilaster Caps, all executed in the highest style of art.

The large and lengthened experience of GEORGE JACKSON and SONS in decorations of Drawing and Dining Rooms, Libraries, &c. for private houses, or public buildings, many of which they have had the honour of executing under Architects of the highest eminence, enables them with confidence to direct notice to that branch of their business.

Upholsterers are invited to inspect the large variety of Glass Frames, Tables, Cornices, Screens, Candelabra, &c. The large extent of their works, and the recent adoption of steam-power and machinery, enables them to offer very superior advantages in materials and speed; while for design, quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo-silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard stone has been an obstruction to Art; but since the Fluo-Silicic process can be applied so readily to soft stone after it is carved, that obstruction exists no longer. The Fluo-silicic at once permanently arrests the decay of all stone.—For further information, apply to the Manager of the Company, Mr. DUDLEY, Architect, as above.

EBOR STAINED-GLASS WORKS.—J. W. KNOWLES, 73, Goodramgate, York, begs to inform the clergy, gentry, and others, that he can execute GROUP or FIGURE WINDOWS in the first style of art, and at the lowest scale of prices! Specimens at 371, Strand (next to Exeter Hall)

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the Lon ion atmosphere

ADULTERATIONS Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

INTERNATIONAL EXHIBITION, 1862.

CLASS 35, NO. 6849.

The only Medal "for Stone Ware" has been awarded to

DOULTON & WATTS, LAMBETH POTTERY,

LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

FIGURE D STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

CARSON'S

ORIGINAL ANTI-CORROSION PAINT.

Patronised by

THE BRITISH GOVERNMENT, | H.R.H. THE PRINCE CONSORT, | RAILWAY & CANAL COMPANIES.
THE RUSSIAN GOVERNMENT, | MOST OF THE NOBILITY & GENTRY, | COLLIERIES, IRONMASTERS, &c.

It is extensively used at home and abroad for all kinds of

OUT-DOOR WORK,

And has been proved, after a practical test of 70 years, to surpass any other Paint. It is applicable to WOODEN HOUSES, FARM and other OUTBUILDINGS, AGRICULTURAL IMPLEMENTS, MACHINES, CONSERVATORIES, PARK FENCING, GATES, &c., IRON ROOFING, BRIDGES, HURDLING, and every description of IRONWORK; while for

PUBLIC EDIFICES, MANSIONS, VILLA RESIDENCES,

And every kind of Brick, Stone, Compo, &c. it is unrivalled, presenting the appearance of fine cut stone.

The Anti-Corrosion is lower in price and lasts twice as long as the best White Lead.

The Anti-Corrosion is a Powder, sold in all colours, and will keep any length of time.

OIL, TURPENTINE, AND BRUSHES.

VALUABLE FREEHOLD AND COPYHOLD BUILDING LAND, WHITECHAPEL, comprising a site of about 3½ acres.

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, at the MART, on WEDNESDAY, JULY 1, 1863, at TWELVE o'clock, in one LOT, a most important site of FREEHOLD and COPYHOLD LAND, about six acres, situate in the parish of the Whitechapel Distillery, Brick-row, abutting upon the Eastern Counties Railway, from which a siding might be formed. And with approaches from Winchester street, Selby street, and other adjoining streets. For the erection of any large manufacturing establishment this property is of large value, from its space and proximity to the City. Printed particulars are in course of preparation, and with plans, may be shortly had of Messrs. TENNANT & DARLEY, Solicitors, Raymond's buildings, Gray's inn, W C; of Messrs. BOCKETT, SON, & BARTON, Surveyors, Lancaster-in fields, W C; at the Mart; and of Messrs. FULLER & HORSEY, Billiter street, London, E.C.

CROYDON, SURREY.—Excellent Building Materials.

MR. WHITTINGHAM is instructed to SELL by AUCTION, on the PREMISES, close to the town of Croydon, on MONDAY, JUNE 22, 1863, at TWELVE, for ONE o'clock precisely, the FIFTEENTH PORTION of the excellent BUILDING MATERIALS of nine of the buildings belonging to the Addiscombe College, comprising about 50-load bricks a large quantity of lath, paving stone, stone sills and coping slates for roofs, stones, window and frames, joists, timber, consisting of bressumers, joists, floor boards, rooting boards, lintels, purlins, & c.; chimney pots, iron water piping and gas piping, firewood, &c &c.—May be viewed on the Friday and Saturday before the sale. Catalogues may be obtained of the Foreman on the Estate; and of the Auctioneer, 14, Moorgate-street, E.C.

PLUMSTEAD, KENT.—Freehold Estate, comprising a brick built House, Five Cottages, Outbuildings, and about Two-and-a-half Acres of Land, suitable for building purposes.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the TOWN HALL, Woolwich, on FRIDAY, JUNE 26, 1863, at SIX for SEVEN o'clock in the evening, a FREEHOLD ESTATE, consisting of a brick built House, containing slate in roof, on the second floor, two large bed-rooms, first floor, four rooms; ground floor, two large bed-rooms, two parlours, store-room, kitchen, scullery, &c. A spacious two story House, Five Cottages, about two acres of market garden Land in the rear; land tax redeemed; suitable for building purposes; situate off the high road from Woolwich to Erith, within a short distance of the Arsenal Station, and near to the Plumstead Station on the North Kent Railway. The whole will be first offered in one lot; and if not sold, the premises will be offered in two lots, and the land in twenty-two lots for building purposes. Nine-tenths of the purchase money may remain on mortgage or contract at five per cent to be paid in nine years by half yearly instalments; but the whole or any part of the same may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained ten days before the sale, of Messrs RUSSELL & DAVIES, 59, Coleman-street, E.C.; and at the Auctioneer, 14, Moorgate-street, E.C.; and at the Place of Sale.

ADDISCOMBE COLLEGE, CROYDON, SURREY.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the GREYHOUND INN, Croydon, on TUESDAY, JUNE 30, 1863, at SIX for SEVEN o'clock in the Evening, a Portion of that eligible ESTATE, late the property of the Hon. the East India Company, consisting of about 32 lots of eligible FREEHOLD BUILDING LAND, with frontages to the St James's and Park roads. The lots are well adapted for a good class of Villa Residence. The property is within ten minutes walk of the New and East Croydon Station; about a mile of that at West Croydon; and when the Addiscombe Railway is completed the station will be on the estate; thus obtaining the property an instant communication with the City and West End at all times of the day. Nine-tenths of the purchase money may remain on mortgage or contract at five per cent, to be paid in nine years by half yearly instalments, but the whole or any part of the same may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained ten days before the sale, of Messrs RUSSELL & DAVIES, 59, Coleman-street, E.C.; and at the Auctioneer, 14, Moorgate-street, E.C.; and at the Place of Sale.

WIMBLEDON, SURREY.—Eligible Freehold Building Land.

Further particulars in a few days, when Catalogues may be had of Mr. H. TOWSE, Fishmongers' Hall, of RICHARD SUTTER, Esq. Architect, 28, Penshurst street; and of PULLEN, HORNE, & EVERSFIELD, 89, Fore street, E.C. and 40, Parliament street, S.W.

HIGHGATE.—23 Acres of Freehold Building Land

MESSRS. WINSTANLEY have received instructions to offer for SALE by AUCTION, at the MART, on THURSDAY, JUNE 25, in lots, the remaining portion of the BROOKFIELD ESTATE, beautifully situate on the south side of Highgate Hill, and comprising about TWENTY THREE ACRES of LAND, suitable for building purposes, having extensive frontages, and commanding pictures views. The Land will be sold in lots from one to three acres, affording to purchasers an opportunity either to erect residences of smaller houses for their own occupation, and for the accommodation of parties carrying on business in the City or at the West end. The property has, at a short distance, the combined advantage of frequent railway and omnibus communication with all parts of the metropolis, and the Local Board of Health of increased facilities, is within the privileged district, and a few minutes' walk only of the Highgate Grammar School.—To be viewed, Printed particulars may, on and after the 1st of June, be had of Messrs. KING, LONGBOURNE, & LONGBOURNE, Solicitors, No. 4, South square, Gray's Inn, W.C.; of Messrs. FEW & CO. Solicitors, 2, Henrietta-street, Covent Garden, W.C.; at the Place of Sale; and of Messrs WINSTANLEY, Paternoster row, E C

FREEHOLD BUILDING LAND, close to the Norwood Junction Station, on the London, Brighton, and South Coast Railway, which upwards of 200 trains stop to and from London Bridge and Victoria daily, and only a short distance from an intended station on the Mid Kent and Addiscombe Railway, about nine miles from London

MESSRS. WINSTANLEY have received instructions to offer for SALE by AUCTION, at the MART, Bartholomew-lane, on WEDNESDAY, the 1st of JULY, in thirty lots, the valuable FREEHOLD PROPERTY known as the ELMORE PARK ESTATE, land tax redeemed and tithe free, consisting of about twenty three acres of most eligible building land, pleasantly situate between Windmill-road, Croydon, and the parish of Croydon, and the Norwood Junction Station, commanding extensive views of the surrounding picturesque scenery, and within a short distance of the Crystal Palace. The estate possesses upwards of a quarter of a mile of frontage to good roads, and presents excellent sites for the erection of villas or other residences, for which there is a growing demand, in the locality; the lots will vary in quantity from about half an acre to two and a half acres, and in the hands of building capitalists the property offers attractions of no ordinary character. To be viewed. Printed particulars, with plans, may be had, twenty-one days previous to the sale, in Croydon; of Messrs. DRUMMONDS, ROBINSON, & FIL, Solicitors; of Mr. JOHN BERNEY, surveyor; at the Greyhound Inn, the Red Lion Inn, Spurfield, and Windmill, St. James's road, Croydon common; the Jolly Sailor, South Norwood; and in London, at the Place of Sale; and of Messrs. WINSTANLEY, No 1, Paternoster-row, E.C.

BROMLEY, KENT.—Charming BUILDING SITES for Gentlemen's Residences.—Immediately adjoining the Shortlands Station, on the Mid Kent Railway, only ten miles from London Bridge. Unrivalled for subdivision in Villa lots, or for the erection of first-class Mansions, with several acres of land to each

MESSRS. DEBENHAM & TEWSON will SELL, at the MART, on TUESDAY, JULY 7th, at TWELVE, in nine Lots, of from about 10 to 20 Acres each (unless sooner sold in one Lot by private contract) the greater portion of the important and very valuable FREEHOLD BUILDING ESTATE known as Shortlands comprising upwards of 120 acres, and offering one of the most agreeable sites for building to be met with near London. Among the advantages offered are—the short distance from the station, the great facility of access to all parts of the metropolis, parts of the metropolis, the pure air, the plentiful supply of water, the rich scenery of the neighbourhood, the beautifully undulating character of the land and its applicability for various styles of house, the views as well as privacy to each of the separate properties into which it is proposed to be allotted. There can be no question that the estate in one which will have very high rank in public estimation, and the demand for first class houses in the district already so great that it offers equal inducements to the one who may be desirous of entering into building operations on a large scale, as to gentlemen who may be in search of a residential estate near London. Particulars and plans, now ready, of JOHN WHICHCORD, Esq. architect, 16, Wallbrook; of ROBERT RITCHIE, Esq. Architect, 7, Beaufort buildings, strand; of Messrs. BURCHELLS, Solicitors, 5, Broad Sanctuary, Westminster; and of the Auctioneers, 30, Cheapside.

OLD BROAD STREET. Highly important Freehold Property, close to the Bank of England, Royal Exchange, Bank of England, and other public buildings, occupying an area of upwards of 1,700 square feet.

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer for SALE by AUCTION, at the MART, opposite the Bank of England, on FRIDAY, 26th JUNE, at TWELVE o'clock (unless previously disposed of by Private Contract), the very valuable FREEHOLD PROPERTY, comprising the site of Nos 8 and 9, Old Broad street, with the vacant ground in the rear, and including the noble building recently erected by the Ocean Marine Insurance Company, abutting upon the Bank of London, and nearly opposite one of the entrances to the Stock Exchange. It possesses a frontage of 67 feet, extends in extreme depth about 67 feet, occupies an area of 1,700 square feet, and presents a most valuable opportunity rarely to be met with of securing a site for offices in one of the very best and most valuable situations in the city of London.—May be viewed, and particulars had of the TAILER, Tree, Southgate; at the Cock, Bowes Manor; the Angel, Edmonton; of Messrs WILDE, REES, HUMPHRYS, & WILDE, 51, Chancery lane; at the Mart; and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad-street, Royal Exchange.

HARROW, MIDDLESEX.—Highly important and valuable Freehold Estate, close to a railway station, having a frontage to the Uxbridge road of nearly a mile, and possessing great advantages for building

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer for SALE, in the month of JULY, a very valuable FREEHOLD ESTATE, known as the Dairy Farm, situate close to the Sudbury Station, on the London and North Western Railway, four miles from Harrow, and only 8 from the metropolis; consisting of a substantial farm, cottage, gardens, farm yard and buildings, and several enclosures of principally fine rich dairy and meadow land, in a high state of cultivation, and containing upwards of 137 acres. The property has a most important frontage of nearly a mile in extent to the road leading from London to Harrow; it is beautifully situate, and extremely valuable for building purposes, and may be subdivided into numerous plots with very considerable advantage and profit.—May be viewed, and particulars had of Messrs DAWES & SON, Ancient court, Throgmorton street, Mr ROBERT FORSTER, Land Agent, Potter's green, Edgware; Mr GEORGE LOWE, Surveyor, Bowling hall street; the King's Head, Harrow; the Mart; and of Messrs NORTON, HOGGART, & TRIST, 62, Old Broad street, Royal Exchange

IMPORTANT SALE.—To Builders, Contractors, and Others.—Boston, Lincolnshire

TO BE SOLD by AUCTION, in the month of JULY next, a valuable FREEHOLD ESTATE, situate in Witham street, in Boston aforesaid, consisting of excellent BUSINESS PREMISES, comprising a newly erected dwelling house, office, and shop, with extensive yards, timber, iron, and other sheds, stables, a large yard, and other premises. A very extensive and lucrative business has been carried on the premises for a series of years, and the same is in the occupation of Mr. Benjamin Bell, Builder, deceased, and are now of the Executors in Trust under the will.—To view the premises, and for further particulars apply to JOHN CARR HEIGHAM, of Boston aforesaid, Ironmonger, and Mr. ROBERT MARSHALL, of the same place, Chemist and Druggist; or at the Offices of Mr. FREDERICK COOKE, Solicitor, Boston.

Boston, June 15th, 1863.

BARKING ROAD. Very Eligible Building Ground, near the Thames Iron Works.

MR. JOHN WALLEN has received instructions to SELL by AUCTION, on THURSDAY, 9th of JUNE, in numerous valuable BUILDING PLOTS, having frontages to the High Barking Road, on Burbury, Woodstock, Wood mason and Crawford Streets, and on the intended new street to lead from the High Barking Road to Hallsville, nearly to the Canons Iron Works. The activity prevailing in the great establishments in this vicinity, the erection of additional works, the improvement of the Docks, and the increase of the Commerce, combined with the large amount of the Labour to be brought forward, render this an unusually favourable opportunity for profitable and secure investment.—Descriptive Particulars and Plans at the Place of Sale; of Messrs GELLATLY & SON, Solicitors, St. Michael's-alley, Cornhill; and of Mr. JOHN WALLEN, 68, Old Broad-street, E.C. and Romford.

GEORGE MITCHELL'S MARBLE and STONE WORKS, WALTON STREET, BROMPTON, S.W.

Notice of PRIVATE SALE of about 200 MARBLE CHIMNEY-PIECES, to be sold at very reduced prices (to save the expense of removal to the Brompton Premises), including the following Marbles, viz.—Statuary, Sienna, Royal, and Sicilian, Black, Spanish, Brocatella, Genoa Green, Irish Green, Blue Belge, Emperor's Red, Irish Fossil, Campanella Mélange, Vein, Siennas, and various rich and valuable Foreign and British Marbles, varying in price from 1l. 10s. to 50l.; and for elegance of design, workmanship, and quality, not to be surpassed in England. Purchased for cash at 2s. and 2s. 6d. approved bills of three and four months will be taken, less 2½ per cent. cash. Purchasers from the country will be supplied with packing cases, and the same packed and delivered to any of the metropolitan stations for 1 per cent. on the amount purchased.

IMPORTANT FREEHOLD PROPERTY in Wray Park, Reigate, comprising Six Residences, with gardens and pleasure-grounds, and several Plots of Building Ground.

MR. JOHN LEES has received instructions from the Proprietor to SELL by AUCTION, at the MART, opposite the Bank of England, on TUESDAY, 23rd JUNE, at TWELVE, in one or more lots, a very compact and valuable FREEHOLD PROPERTY, bounded by Wray Park road, Brighton-road, and Raglan-road, and including six residences, occupying an elevated position, commanding extensive views, a short distance from St. Mark's Church, and the Reigate Town Railway Station on the South-Eastern Railway, a mile and a half from Redhill Junction, and only three quarters of an hour's ride from London. The houses are planned with regard to the requirements of a family, and are known as Meadow Croft, Helena Lodge, and Temple Court, having stabling, and Herald in Villa, and two other residences without stable accommodation, the whole having extensive gardens and pleasure grounds. The remaining lots of building ground possess a frontage to the Wray Park road, Brighton road, and Raglan-road, and are admirably adapted for the erection of good residences, the whole occupying an area of about nine acres, and being of the value of upwards of 90l. per annum.—Particulars may be obtained of Messrs PEIER BROAD, PRICHARD, & WILTSHIRE, Estate Agents, &c. No. 28, Poultry, London; of Messrs. WILSON & SON, Solicitors, No 15, Bedford-street, Strand, London, and Hanmer-smith, at the Auction Mart, and of Mr. JOHN LEES, Estate Agent and Auctioneer, Reigate, Surrey.

[*For remainder of Auctions see* p. 451.

COMPETITIONS.

TO ARCHITECTS.—It is intended to erect a GRANITE OBELISK on a public thoroughfare, about 80 feet by 160 feet—"The Pasha," at Totnes, in memory of the late Mr. W. J. Willis, who perished whilst exploring the interior of the great Australian Continent. Designs and specifications for the said purpose may be sent to the undersigned on or before the 9th of JULY, 1863. The cost of the erection of the said obelisk not to exceed £50. £5 5s. will be given for the design adopted.—Further information may be obtained of J. RICES, Hon. Sec. to the Memorial Committee.
Totnes, June 24, 1863.

LIVERPOOL EXCHANGE COMPANY (LIMITED).—The UNSUCCESSFUL CANDIDATES can have their PLANS RETURNED immediately, on communicating with the undersigned, 10, Water-street, Liverpool.
A. T. SQUAREY, Secretary.

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.—TENDERS are required for the ERECTION of an INFANT SCHOOL and SCHOOL-MISTRESS'S QUARTERS, at Hounslow Barracks, in the county of Middlesex.
Persons desiring to Tender for these works must leave their names at this Office, between the 10th and 15th of JULY, 1863 (during the hours of ELEVEN am and THREE pm) both days inclusive, and pay the sum of half a guinea for the bills of quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor.
The Secretary of State does not bind himself to accept the lowest or any Tender.
Royal Engineer Office, London District, 11, James-street, Buckingham Gate, S.W. June 24, 1863.

WAR DEPARTMENT CONTRACT.—NOTICE TO BUILDERS.
TENDERS are required for the ERECTION of QUARTERS for the Families of Married Soldiers, at Netley Hospital, in the County of Hants.
Parties desiring to Tender for these works are required to attend at this Office on TUESDAY, the 30th day of JUNE, 1863, at TWELVE o'clock, to appoint a Surveyor to take out the quantities in conjunction with the Government surveyor. Each party will be required to pay the sum of one guinea for the quantities.
The Secretary of State does not bind himself to accept the lowest or any Tender.
Royal Engineer Office, Netley, 6th June, 1863

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.—TENDERS are required for the ERECTION of QUARTERS and STABLES for MILITARY TRAIN, at Netley Hospital, in the County of Hants.
Parties desiring to Tender for the execution of these Works must leave their names at this Office, on or before the 30th day of JUNE, 1863, and pay the sum of Ten Shillings and Sixpence for the bills of quantities, which will be forwarded to each party, as soon as prepared by the Government Surveyor.
The Secretary of State does not bind himself to accept the lowest or any Tender.
Royal Engineer Office, Netley, 6th June, 1863.

TO BUILDERS.—Persons desirous of TENDERING for the RE-SEATING of the newly-built CHAPEL at East Leake, in the county of Nottingham, may inspect the plans and specification, and see the pattern seat, at the Chapel, East Leake, on and after MONDAY, the 22nd day of JUNE next. Sealed Tenders, endorsed "Tenders for Re-seating Chapel, East Leake," to be sent to C. ANGRAVE, Esq. East Leake, near Nottingham, on or before TUESDAY, JUNE 30, 1863. The lowest or any Tender will not necessarily be accepted.

WEST HAM LOCAL BOARD of HEALTH.—The Local Board of Health for the District of West Ham, in the County of Essex, are prepared to receive TENDERS for LAYING GRANITE CURB, and also for supplying such Road Metal and Labour as may be required in making and repairing the streets called Eagle-street, Arthur street, Poplar street, Emily street, Ivy street, Nelson-street, Francis street, and Lilliput road, all in Hallsville, within the said district, according to plans, sections, specifications, and conditions prepared by Mr. MARSHALL, the Surveyor of the Board, and which may be seen at his Office, at Rokeby House, Stratford, where also forms of Tender may be obtained, together with any further information required. Tenders, endorsed, "Tender for Curb," are to be sent to me on or before MONDAY, the 29th day of JUNE instant.—By order of the Board,
CHARLES WILSON, Clerk.
Rokeby House, Stratford, E. June 18, 1863.

WEST HAM LOCAL BOARD of HEALTH.—The Local Board of Health for the District of West Ham, in the County of Essex, are prepared to receive TENDERS for the CONSTRUCTION of a SEWER and ROAD, to be called Shirley-street, Hallsville, being within the district of the said Board, according to plans, sections, specifications, and conditions prepared by Mr. MARSHALL, the Surveyor of the Board, and which may be seen at his Office, Rokeby House, Stratford, where also forms of Tender may be obtained, together with any further information required. Tenders, endorsed, "Tender for Sewer and Road," are to be sent to me on or before MONDAY, the 29th day of JUNE instant.—By order of the Board,
CHAS. WILSON, Clerk.
Rokeby House, Stratford, E. June 18th, 1863.

LANCASHIRE and YORKSHIRE RAILWAY. The Directors are prepared to receive TENDERS for the CONSTRUCTION of a RAILWAY from the New Bailey-street Station, Salford, to the Victoria Station, Manchester. Plans may be seen, and specifications and forms of Tender obtained, at the Engineer's Office, Hunt's Bank, Manchester, on and after MONDAY, the 22nd JUNE instant. Tenders, properly endorsed and addressed to the Directors, must be in the hands of the undersigned not later than TWELVE o'clock on MONDAY, the 6th JULY prox no.
WILLIAM S. LAWN, Secretary.
Manchester, 15th June, 1863.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of a CHAPEL, SCHOOL-ROOMS, &c at Redruth, in the county of Cornwall may inspect plans and specifications at the Offices of THOMAS SIMPSON, Architect, Nottingham, on and after FRIDAY, the 19th, until FRIDAY, the 26th day of JUNE; and at the Vestry of the United Methodist Free Church, Redruth, on MONDAY, the 29th day of JUNE, until SATURDAY, the 11th day of JULY. Sealed Tenders to be delivered at the Offices of Mr THOMAS ROSKROW, Bookseller, Redruth, not later than the 15th day of JULY, endorsed, "Tender for Chapel." The lowest or any Tender not necessarily accepted.

CONTRACTS.

TO CONTRACTORS, ROADMAKERS, and OTHERS.—TRANMERE IMPROVEMENT ACT, 1862.—The Local Board for the District of Tranmere, as authorised by the above Act, require TENDERS for the construction of a MAIN SEWER in the Valley leading from Whetstone Lane southwardly, with the requisite Junctions, Branches, Manholes, Gullies, and Ventilating Shafts, and for the MAKING of a ROAD over the same, being a length of about 350 yards. Plans, sections, and specifications, &c, may be seen on application to Mr. W. A. RICHARDSON, C.E. Surveyor to the Local Board, at his Office, Holt hill, Tranmere, on and after MONDAY, 22nd JUNE next, and copies of the specifications and form of Tender may be obtained on payment of 1l. Sealed Tenders, made on the printed forms only, to be addressed to me, and left at my Office not later than THURSDAY, 23rd JULY next. Contracts and bonds will be prepared by the Law clerk to the Local Board at the expense of the contractors. Security will be required for the due performance of the work. The Local Board do not bind themselves to accept the lowest or any Tender.—By order,
GEORGE LLOYD, Law clerk to the Local Board.
Public office, Holt hill, Tranmere, 20th May, 1863.

TO BUILDERS. — Persons desirous of CONTRACTING for the ERECTION of TEN HOUSES at Newington, near Sittingbourne, Kent, may see plans and specifications on application to Mr F. T. COLWELL, Architect, 9, Princes-terrace, Prince of Wales's road, Haverstock-hill, on and after WEDNESDAY, JULY 1st. Tenders to be sent in not later than FIVE o'clock JULY 8th, sealed, and indorsed "Tender for Pemberton-terrace, Newington, Kent."

TO PAVIORS and OTHERS.—The Commissioners of Sewers of the City of London will meet in the Guildhall of the said city on TUESDAY, the 30th of JUNE, 1863, at HALF-past TWELVE o'clock precisely, to receive TENDERS for RELAYING the CARRIAGEWAY PAVEMENT on the south, the east, and west sides of St. Paul's Churchyard, agreeably to a specification which may be seen at this Office. Persons tendering are required to give the names and addresses of at least two substantial householders as their sureties to enter into bond with the contractor for the due performance of the contract. The Commissioners do not pledge themselves to accept the lowest Tender, or any, unless deemed satisfactory, and no Tender will be received after TWELVE o'clock on the day of treaty.
JOSEPH DAW, Principal Clerk.
Sewers Office, Guildhall, June 16, 1863.

TO CONTRACTORS.—TO BE LET, the several Works required in the ERECTION of four pairs of Semi-detached VILLAS, at Mount Boyd, Manningham, Bradford.—The plans and specifications may be seen, and the bills of quantity obtained at our Offices, in Bradford, from THURSDAY, the 25th, until SATURDAY, the 4th JULY, 1863, and on which last mentioned day Tenders must be delivered to us before TWELVE o'clock at noon. The lowest Tender will not necessarily be accepted.
LOCKWOOD & MAWSON, Architects.
43, Kirkgate, Bradford; 10, Lincoln's-inn-fields, London.

LONDON, BRIGHTON, and SOUTH COAST RAILWAY COMPANY.—TO CONTRACTORS.—LONDON BRIDGE TERMINUS ENLARGEMENT.—CONTRACT No 1.—The Directors of the London, Brighton, and South Coast Railway Company are ready to receive TENDERS for the CONSTRUCTION of a NEW STREET and SEWER, about 340 yards in length, in the Parishes of St. Thomas and St. Olave's, Southwark, and County of Surrey.—Plans and specifications of the proposed Works may be seen at the office of Mr. FRED. D. BANISTER, Resident Engineer, London Bridge Terminus, on and after MONDAY, the 29th inst. and sealed Tenders in the prescribed form only, endorsed "Tender for New Street," must be delivered to the undersigned not later than Two o'clock in the forenoon of MONDAY, the 13th of JULY next. The Directors will not be bound to accept the lowest or any Tender.
FREDERICK SLIGHT, Secretary.
London Bridge Terminus.

LONDON, BRIGHTON, and SOUTH COAST RAILWAY COMPANY.—TO CONTRACTORS.—LONDON BRIDGE TERMINUS ENLARGEMENT.—CONTRACT No 2.—The Directors of the London, Brighton, and South Coast Railway Company are ready to receive TENDERS for the EXECUTION of the necessary WORKS required in ARCH OVER the SPACE situate between the existing London Bridge Terminus and a New Street to be formed in the Borough of Southwark and Parish of Saint Olave, for the Enlargement of the said Terminus, and comprises an area of about 17,700 superficial square yards.—Plans, drawings, and specifications of the proposed Works may be seen, and all necessary information obtained at the Office of Mr. FRED. D. BANISTER, Resident Engineer, London Bridge Terminus, on and after MONDAY, the 29th inst. and sealed Tenders in the prescribed form only, endorsed "Tender for Arching" must be delivered to the undersigned not later than Two o'clock in the forenoon of MONDAY, the 13th of JULY next. The Directors will not be bound to accept the lowest or any Tender.
FREDERICK SLIGHT, Secretary.
London Bridge Terminus.

BIDEFORD BRIDGE.—To BUILDERS and MASONS.—TENDERS for the REPAIR and PARTIAL EXTENSION of some of the PIERS of Bideford Bridge, will be received by the Bridge Committee at the Stannary Court, on or before the 8th day of JULY next. The specification and description of the work may be seen at the Office of the Bridge Steward, on and after the 24th instant. The Committee do not pledge themselves to accept the lowest or any Tender.
CHARLES HOLE, Bridge Steward.
Bideford, 20th June, 1863.

REIGATE GAS COMPANY. TENDERS are required for the ERECTION of a NEW GAS TANK, at the Works of this Company at Reigate. A plan and specification may be seen, and the terms known, on application at my Office, at Reigate. It is desired that the Tenders may be sent in not later than the 7th day of JULY next. The Directors do not bind themselves to accept the lowest or any Tender.
WM. THORNTON, Old Bank, Reigate.

For remainder of Contracts see next Page.

CONTRACTS.

AYSGARTH PARISH CHURCH, Wensleydale, Yorkshire.—To BUILDERS and OTHERS.—Plans, drawings, and specifications for the RESTORATION and partial RE-BUILDING of the above may be inspected at the Vestry of the said Church, from MONDAY, the 29th inst. to SATURDAY, the 11th of JULY. Quantities will be furnished by post to such parties as have applied for them. Sealed Tenders, endorsed "Tenders for the Restoration of Aysgarth Church," to be forwarded to J. GREEN, Architect, Perlethorpe, near Tadcaster, on or before the 14th of JULY next. The Committee do not pledge themselves to accept the lowest or any Tender.

TO CONTRACTORS.—To SLATE QUARRYMEN.—TENDERS are WANTED for the MAKING of ROOFING SLATES from two quarries situate at Honister, near Buttermere, Cockermouth, Cumberland, and within 400 yards of each other. One of those Quarries is wrought by the usual practice, the other by ladders and naked candle lights. Also, the REMOVING of 2,000 cubic yards of OLD QUARRY RUBBISH, at Easedale Quarry, situate at one mile distant from the others. Contractors to have the use of waggons and rails for removing and working the same.—Apply to SAMUEL WRIGHT, Slate Merchant, Cockermouth, who will treat for the same. The proprietor does not pledge himself to accept the lowest or any Tender.

Cockermouth, 6th June, 1863.

TENDERS are required for the ERECTION of TWO VILLAS and STABLING, to be built at Muswell-hill. The drawings may be seen on application to the Architect, H. BLACKWELL, E., 36, Chancery-lane, W.C.

NORTH MIDDLESEX GAS WORKS.—TENDERS are invited for the BUILDINGS and EXCAVATORS WORK for the above WORKS about to be ERECTED at HENDON. Plans and bills of quantities may be seen at the Office of the Contractors, R. LAIDLAW & SON, 8, Bankside, Southwark, S.E. to whom Tenders must be delivered on or before THURSDAY next, 2nd JULY, 1863.

TO BUILDERS.—WANTED, ERECTED, TWO SMALL DETACHED VILLAS (north London).—Apply by letter to H. B. care of Mr. Spalding, 2, Albion-place, Barnsbury, N.

DRY LIME PURIFIERS.—The Oxford Gaslight and Coke Company are desirous of receiving TENDERS for the SUPPLY and ERECTION of TWO DRY LIME PURIFIERS, ten feet square, and four feet deep. Drawings and specification may now be seen at the Company's Works. The Tenders to be sent in on or before FRIDAY, 3rd JULY next, addressed to the Chairman of Directors, marked "Tenders for Purifiers." The Directors do not bind themselves to accept the lowest or any Tender.—By order of the Committee, CHARLES HENWOOD, Engineer.

THE RYE PATENT SLIP and DOCK COMPANY (limited).—The Directors are desirous of receiving TENDERS for a SLIP of 300 feet long in its ways, with a Cradle, 100 feet long. Drawings have been prepared in detail, and can be seen on application to the Company's Engineer, Mr. R. C. MAY, 3, Great George-street, Westminster; or to Mr. HENRY STOCKS, Market-street, Rye. The Tenders to be sent in to Mr HENRY STOCKS, at the above place, on or before the 6th day of JULY next, at NOON. The Directors reserve to themselves the power to reject the lowest or any Tender.

Rye, 20th June, 1863.

TENDERS are required for the ERECTION of Three DWELLING HOUSES and Two Shops, at Battersea.—Builders willing to TENDER can see the plans and specifications at the Office of W. WALLEN, Esq. Architect, Dowgate-hill Chambers, E.C. on and after THURSDAY, 2nd JULY next. Tenders to be delivered on THURSDAY, 16th JULY, endorsed "Tender for Houses and Shops, Battersea Rise." The lowest or any Tender will not necessarily be accepted

TO BUILDERS, - SUSSEX. — GREAT BENTLEY FARM.—Builders desirous of sending in TENDERS, for the ERECTION of a new HOMESTEAD at Great Bentley, about two miles from Hayward's Heath Station, on the London and Brighton Railway, on the property of W. H. Sergison, Esq. can see the drawings and specifications on application to Mr. DENDY, on the Farm, at Great Bentley, on and after the 27th inst. Tenders to be sent in, under cover, to Messrs. CLUTTON, 9, Whitehall place, Westminster, S.W. on or before MONDAY, the 13th day of JULY. Messrs. CLUTTON do not bind themselves to accept the lowest or any Tender

UNITED KINGDOM ELECTRIC TELEGRAPH COMPANY (LIMITED).—The above Company is prepared to receive TENDERS from responsible parties for the ERECTION of a LINE or LINES of ELECTRIC TELEGRAPH between the following places:—Leeds and Newcastle-on-Tyne, Newcastle-on-Tyne and Edinburgh, Edinburgh and Glasgow, and for certain branches in connexion with the above Lines. Such Tenders to be forwarded to the Company's Office, by TUESDAY, the 7th day of JULY next, and to be marked "Tenders for the Erection of Lines." Tenders may include the whole of the above Works, or a portion or portions of the same. The Directors do not bind themselves to accept the lowest or any Tender. Full particulars, and a copy of the specification, may be obtained after MONDAY next, the 29th instant, by parties desirous of Tendering, on application at the Company's Office, No 237, Gresham House, Old Broad Street, London, E.C. where specimens of the arms and insulators to be employed may be inspected.—By order, W. ANDREWS, Secretary.

June, 1863.

TO BUILDERS.—TENDERS are required for the various WORKS in ERECTION of a STUFF WAREHOUSE, proposed to be built in Leeds-road, Bradford. The drawings and specifications may be seen and bills of quantities can be obtained, at my Office, from WEDNESDAY, the 24th inst. to THURSDAY, the 2nd of JULY next, on which day Tenders are to be delivered. E. MILNES, Architect, 39, Hall Ings, Bradford.

June 24, 1863.

TO GAS ENGINEERS and CONTRACTORS.—The Directors of the London Gas Company (Limited) are desirous of receiving TENDERS for the ERECTION of their WORKS. The plans and specifications may be seen, and further particulars obtained, at the Office of the Solicitors of the Company, Messrs. COPEMAN & SON, Lincoln's-inn-fields; or from the Engineer, Mr. THOMAS H. MERIVEN, the Works, Bury Saint Edmund's. Sealed Tenders to be delivered at the Solicitors' Office, at 1 o'clock, on or before 24 FRIDAY, the 31st day of JULY next, at TWELVE o'clock at Noon. The Directors do not bind themselves to accept the lowest or any Tender.

MAIDSTONE SEWERAGE.—To CONTRACTORS and OTHERS.—Persons willing to contract with the Commissioners of the Maidstone Pavements to LAYING IN about 1,900 yards of PIPE SEWERAGE in the Len Valley, and 800 yards of 3 inch PIPE into the River Medway, with cesspools, traps, gratings, and other works, are requested to deliver Tenders for the same at the office of Messrs. BEALE & HOAR, Maidstone, on or before the 14th day of JULY, 1863. Plans and a specification of the work may be seen at the office of Mr. BULMER, Maidstone, on and after WEDNESDAY, the 1st JULY. The Committee of Commissioners do not bind themselves to accept either the lowest or any other Tender, and security will be required for the proper performance of the works.—By order of the Committee, BEALE & HOAR, Clerks.

Maidstone, June 24, 1863.

TO BUILDERS and IRONFOUNDERS.—Parties desirous of TENDERING for the several WORKS required in the ERECTION of the FIRST PORTION of a COMBINO ESTABLISHMENT to be built in Thornton-road, Bradford, may see the drawings and specifications, and obtain bills of quantities, at my Offices, from WEDNESDAY, the 1st, until WEDNESDAY, the 8th of JULY next, on which day Tenders are to be delivered.

E. MILNES, Architect.

39, Hall Ings, Bradford, June 24, 1863.

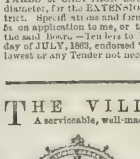
TO CONTRACTORS and IRONFOUNDERS.—The Highway Committee of the Corporation of the Borough of Nottingham are prepared to receive TENDERS for the CONSTRUCTION of about 2,300 feet of Outfall SEWERAGE, for the Meadows District; also for the Supply of about 600 feet Cast-Iron Tubing, 2 feet 6 inches diameter.—Plans and specifications may be seen at my Office; and Tenders must be delivered, free of cost, on or before TUESDAY, the 7th day of JULY next, and before six o'clock p.m. of that day. The lowest or any Tender will not necessarily be accepted. M. O. TARBOTTON, Corporation Surveyor.

Public Offices, Nottingham, 24th June, 1863.

TO BUILDERS and CONTRACTORS.—PARISH of SAINT PANCRAS, in the COUNTY of MIDDLESEX.—Notice is hereby given, that a joint Committee of the Directors of the Poor and of the Vestry of the Parish of Saint Pancras will meet on MONDAY, the 13th day of JULY, at the Board-room of the Workhouse, in King's-road, Pancras-road, to receive separate TENDERS from persons willing to CONTRACT for the ERECTION of New LUNATIC WARDS, with Dormitories over, and of a DINING HALL with Dormitory over, pursuant to plans and specifications to be seen daily, on or after MONDAY next, the 29th day of JUNE, between the hours of TEN and FOUR o'clock, at the Office of Mr. WM. BOOTH SCOTT, C.E. Chief Surveyor to the Vestry, No. 10, Edward street, Hampstead road, where further particulars and forms of Tender may be obtained. The said Joint Committee hereby give notice, that neither the Directors of the Poor nor the Vestry of the said Parish of Saint Pancras will supply quantities of the several Works, or be in any way responsible for quantities which may be taken out by any person. Good security will be required for the due performance of both Contracts, and the written consent of both sureties must be forwarded with each Tender. The Joint Committee do not bind themselves to recommend the acceptance of the lowest or any Tender. Sealed Tenders to be delivered, addressed to me, at the Vestry Office (adjoining the Workhouse), King's-road, Pancras-road, by or before TWELVE o'clock at noon, on the said MONDAY, the 13th day of JULY. By order, FRANCIS PLAW,

Vestry Clerk, and Clerk to the Directors of the Poor.

Vestry Office, June, 1863.



ATHERSTONE GRAMMAR SCHOOL.—TO BUILDERS.—Persons desirous of TENDERING for the BUILDING of the SCHOOL HOUSE, DOMESTORIES, and KITCHEN-OFFICES, can inspect the drawings and specifications at the Girls' School, North street, Alkerton, on and after MONDAY, JULY 6th. Sealed Tenders to be sent to the Architect on THURSDAY, JULY 16th, 1863. The Trustees do not pledge themselves to accept the lowest or any Tender, and all necessarily subject to the approval of the Charity Commissioners. RT. JENNINGS, Architect.

Atherstone, June 23rd, 1863.

MERTHYR TYDFIL LOCAL BOARD of HEALTH.—To IRONFOUNDERS.—The above Board is desirous of receiving TENDERS for the SUPPLY of about 10,000 YARDS of CAST-IRON SOCKET PIPES, from 2 inches to 8 inches diameter, for the EXTENSION of the WATER SUPPLY of their district. Specifications and forms of Tender may be had on payment of 5s. on application to me, or to Mr. SAMUEL HARPUR, Surveyor to the said Board.—Tenders to be delivered to me on or before the 13th day of JULY, 1863, endorsed "Tender for CAST-IRON PIPES." The lowest or any Tender not necessarily accepted.

J. W. RUSSELL, Clerk.

THE VILLAGE CLOCK.—A serviceable, well-made, and warranted TURRET CLOCK, to go eight days and strike the hours, for Forty Guineas; not to strike, from Fifteen to Twenty Guineas; adapted for the village church or school.

INTERNATIONAL EXHIBITION.

A sample of the Forty-Guinea Village Turret Clock may be seen in action and striking, with dial and bell complete. Also a sample Turret Clock, from Fifteen to Twenty Guineas, suitable for school or stable, in Class 15, No. 3,283.

JOSEPH FAIRER,

Turret Clockmaker to Her Majesty's War Department,

The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 1862.

AUSTIN'S IMPERIAL PATENT SASH

and BLIND LINES
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.
ESTABLISHED 1774.

MANTEL PIECES, ENGLISH AND FOREIGN,

IN EVERY VARIETY OF DESIGN AND COST,

Have been added to their LARGE and EXCELLENT ASSORTMENT of FINE FINISHED STOVES FENDERS, &c. in the NEW SHOW ROOMS of the

GENERAL IRON FOUNDRY COMPANY (LIMITED),

At No. 43, UPPER THAMES STREET, LONDON.

By an arrangement with Mr. WILLIAM POTTS, of Birmingham, the Company have the exclusive Right of Sale of his ART MANTELS in the London District. These Works are of the HIGHEST EXCELLENCE in DESIGN and FINISH, very beautiful, and durable. They also beg to call special attention to the beautiful and varied productions in ART BRONZES and METAL WORK, adapted for ARCHITECTURAL and CABINET DECORATION, MURAL MONUMENTS, &c now on view in their Rooms. Also to the following Articles of their Manufacture, viz.

PATENT WROUGHT IRON WINDOWS,

Strong, light, durable, easily fixed, cheap, and free from risk of breakage.

BILLING'S PATENT CHIMNEY THROATS AND AIR APPARATUS.

Most effective for the Cure of Smoky Chimneys.

FIRST-CLASS COOKING APPARATUS,

For Club Houses, Hotels, Restaurants, &c.

WROUGHT IRON WINE BINS.

FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING THIRTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom. Also their

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with SEPARATE REST FOR EACH BOTTLE,

Peculiarly adapted for Private Cellars.

No laths are required, and all trouble of Binning is avoided.

SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.

THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

BOND & SCAMMELL (late Thomas Pugh & Co.)

WHOLESALE IRONMONGERS,

13, KING STREET, SNOW HILL, LONDON.

NUT PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in public and private buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both rim and mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich designs in glass, china, brass, bronzed, gilt, carved woods, inlaid, &c. &c. or to any design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of locks, latches, brass foundry, and ironmongery, required for buildings, of the best quality manufactured, at the lowest wholesale prices.

*** Illustrations and particulars sent upon application.

INTERNATIONAL EXHIBITION, 1862.—CLASS 31, LOCKS, &c. No. 6105.

HOBBS'S CELEBRATED MACHINE-MADE LEVER LOCKS,

Suited for all purposes, at Prices that silence competition.

SUITES OF LOCKS FOR MANSIONS, WAREHOUSES, AND OTHER LARGE STRUCTURES, WITH OR WITHOUT MASTER KEYS.

PUBLIC BUILDINGS OF EVERY KIND FITTED.

The parts in the Plate marked F and C show the form of Hobbs's Patent Frictionless Follower and Crank, by which a rolling instead of a rubbing motion is produced, thereby preventing friction.

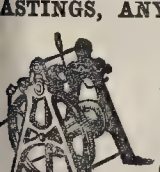
S, S, shows the double spring, by which means the Latch is allowed to work independent of the Crank in shutting the door, thereby avoiding the necessity of slamming; at the same time sufficient strength is given by the Follower Spring to throw the heaviest knobs or handles.

HOBBS' PATENT FRICTIONLESS FOLLOWER, & DOUBLE SPRING FOUR-LEVER MORTISE LOCK, Price 8s.

FIREPROOF SAFES, IRON DOORS, CASH BOXES, &c.

HOBBS'S PATENT PROTECTOR LOCK, AND CHANGEABLE KEY BANK LOCK FOR SPECIAL SECURITY.

ESTIMATES AND ILLUSTRATED PRICE LISTS FURNISHED ON APPLICATION.



For specimens of all the varieties of these LOCKS, and the different stages of manufacture by machinery, from the first to the last process, see HOBBS'S STAND in the EXHIBITION, CLASS 13, No. 6105, ON THE SOUTH-WEST SIDE OF THE EASTERN DOME.

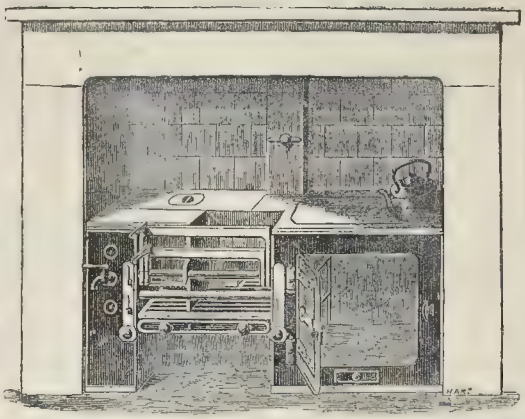
LONDON OFFICE—61A, MOORGATE STREET, E.C.

CUNDY'S PATENT ECONOMIC, BRICK-OVEN, DOUBLE FALL, DOWN-BAR KITCHEN RANGE.

This drawing represents a Range 4 feet long, 3 feet 4 inches high, and 17 in. deep.



The Hob over the top of the Oven forms a HOT PLATE; the fire passes under it and all round the oven, thereby heating it thoroughly and equally all over.

The sliding Hob, which is fastened to the Winding Cheek, also forms a Hot Plate.

The Oven and Hob can be kept sufficiently hot for the purpose of baking and boiling, with the fire only six inches long.

This Range can be fitted up as a close Kitchener, with Two Ovens, Hot Closets, &c. if required.

This Range, also Cundy's Multum in Parvo Poor Man's Kitchener, also Cundy's Patent ORIGINAL FIRE-BRICK Warm Air Ventilating Stove, suitable for CHURCHES, HALLS, SCHOOLS, and STAIRCASES,

Can be seen in action every day from Nine till Seven, at the Show Rooms of the MANUFACTURER,

WILLIAM ADDIS,

6, 7, and 15, LEICESTER STREET, LEICESTER SQUARE,

WHOLESALE AND RETAIL IRONMONGER, AND STOVE GRATE MANUFACTURER,

Where Mr. CUNDY can be gratuitously consulted relative to the Cure of Smoky Chimneys.

A PROSPECTUS AND REFERENCES WILL BE FORWARDED ON APPLICATION BY LETTER.

BROWN & GREEN'S
PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, an

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and the large ones, fitted with Bath and Steam Apparatus, &c. form the most complete appointment for large establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

81, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept 6, 1862.

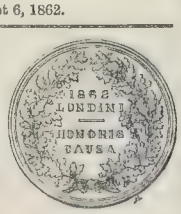
THE PRIZE MEDALS

(LONDON, 1851. PARIS, 1855. LONDON, 1862)

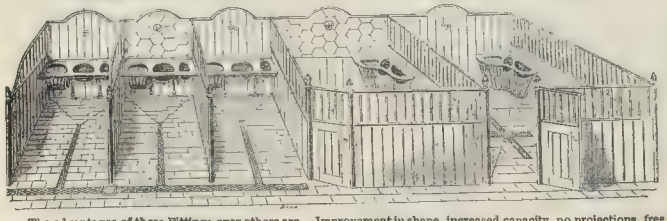
Awarded to

COTTAM & COMPANY,

2, WINSLEY STREET, LONDON, W.



For progressive and general improvements in



STABLE FITTINGS AND HARNESS BRACKETS.

PATENTEES AND ORIGINAL INVENTORS OF

THE IMPROVED SYSTEM OF STABLE AND HARNESS FITTINGS,

COMMENDED BY THE MOST COMPETENT JUDGES IN THE UNITED KINGDOM.

The advantages of these Fittings over others are,—Improvement in shape, increased capacity, no projections, free ventilation, preventing foulness in the rack, facility in fixing, safety from accident, durability in construction, and cleanliness in use.

STALL-FITTINGS TO ANY WIDTH OF IRON ENAMELLED, OR GALVANIZED IRON.

COTTAM & CO. exhibit for inspection at their Iron Works, 2, Winsley-street, W. an extensive range of full-sized Stalls, Loose Boxes, and Harness Rooms, the most complete that can be imagined.

COTTAM & CO.'s ONLY ADDRESS IN LONDON IS 2, WINSLEY-STREET, W.

N.B.—WINSLEY-STREET IS THE STREET OPPOSITE THE PANTHEON.

FIRE-PROOF CONSTRUCTION.—FOX & BARRETT'S PATENT.

This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,

MR. BARRETT,

12, YORK BUILDINGS, ADELPHI.

CANNON IRON FOUNDRY 156, Goswell-street, St. Luke's.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.

It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862.

"INTERNATIONAL EXHIBITION, CLASS 31.

"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Range is the placing of the OVEN and ROASTER one above the other instead of *side by side*; and the ROASTER is constantly replenished with fresh air."

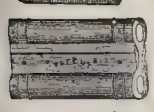
EVERY ARTICLE OF BUILDERS' IRONMONGERY.



Priced Lists on application

ESTABLISHED 1846.

Pel hangings Railings, and

PATENT CLIMAX DOOR SPRINGS,

FOR SINGLE AND DOUBLE-ACTION DOORS.

PATENT CASEMENT STAYS, FASTENINGS, AND CUPBOARD TURNS,

GOTHIC, DROP, AND OTHER DOOR HANDLES.

PATENT BARREL BOLTS, NORFOLK, SUFFOLK, AND GOTHIC LATCHES,

BRASS AND IRON LOCKS OF EVERY DESCRIPTION.

Builders', Cabinet, and Ship Brass Founders.

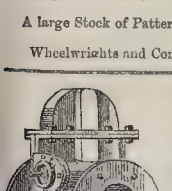
WILLIAM GREENWAY & CO.

MANUFACTURERS, BIRMINGHAM.

CASTINGS AND WROUGHT IRONWORK

OF EVERY DESCRIPTION.

GLOVER, BROTHERS,



FOUNDERS, ENGINEERS, AND SMITHS,

168, DRURY LANE, AND WORKS ALSO AT SPA ROAD, BERMONDSEY.

Wrought Iron Girders, Fitches and Joists, Conservatories, Verandahs, Circular Staircases, Wrought-Iron Doors, Strong Rooms and Iron Houses, Iron Roofing, &c. &c.

A large Stock of Patterns for Building and other Purposes, for the use of which no extra charge is made. Estimates on application.

Wheelwrights and Contractors—1 Dean-street, Oxford-street, and Parker's-row, Bermondsey.

REDUCED PRICES OF

BRYAN DONKIN & CO.'S

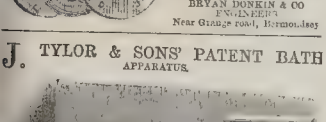
IMPROVED GAS VALVES.

From 2 in. to 18 in. price 9*s.* 6*d.* to 15*s.* per in. diameter.

List of Prices, with full dimensions of all sizes up to 30 in. to be had on application.

These Valves are all proved to 30lb. on the square inch before leaving the works, and are always kept in stock.

Valves made with outside racks to order.



Also Screw Water Valves, with gun-metal faces.

BRYAN DONKIN & CO

ENGINEERS

Near Grange road, Bermondsey

J. TYLOR & SONS' PATENT BATH APPARATUS.

The bath and boiler may be fixed in the same or separate rooms, anywhere below the level of cold water cistern. Open or close fire at pleasure. No brickwork setting for boiler required.

Estimates given from architects' drawings, or by inspection of buildings.

Catalogues, containing Nine Illustrations of different methods of heating baths, sent on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate street, London.

TO IRONMONGERS AND THE TRADE GENERALLY.

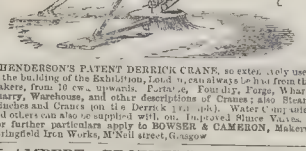
D. HULETT & CO. Manufacturers

of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show, every article marked in plain figures. Patentees and Manufacturers of the Mercurial Gas Regulator. Complete Pattern-book and Price-lists, 12s.—Nos. 55 and 56 High Holborn.

IRON ROOFING of CORRUGATED IRON,

Wrought Iron, principal Roofs covered with Slates, Iron Bridges, Girders, and Railings; also Portable Buildings for Dwellings, Farm Purposes, Churches, Chapels, Schools, Theatres, Concert or Dancing Rooms, &c. suitable to all Climates, fixed complete in town or country or packed for exportation

For Designs and Estimates apply to



RANDAL STAP, Contractor,

No. 32, KING WILLIAM STREET, E.C.

Where numerous Drawings and Photographs may be seen.

N.B. The Iron Buildings manufactured by R. STAP are not fixtures on Leasehold Property.

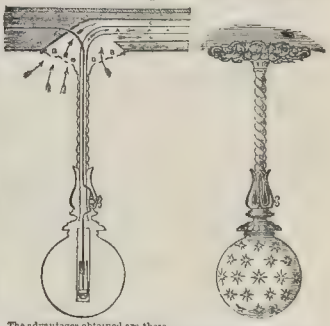
HENDERSON'S PATENT DERRICK CRANE—Prize Medal for Practical Utility and Moderate Cost.

HENDERSON'S PATENT DERRICK CRANE, so extensively used in the building of the Exhibition, Lords, can always be had from the Makers, from 10 cwt., upwards. Portable, Foundry, Forge, Wharf Quarry, Warehouse, and other descriptions of Cranes; also Steam Winches and Cranes on the Derrick principle. Water Companies and others can also be supplied with on Improved Sluice Valves. For further particulars apply to BOWSER & CAMERON, Makers, Springfield Iron Works, M'Neil street, Glasgow

---

LAMBERT, BROTHERS, Manufacturers

of Lap-welded Boiler Tubes, Locomotive and Marine Engine Fittings, Wrought-iron Welded Pipe, for Steam, or High pressure Water and Gas; High pressure Steam and Water Valves, Hydraulic Machinery, Pumps, Closets, &c.; Stocks Taps and Dies, Chandeliers, and Patent Portable Bedsteads.—Walsall.



DAY and GAS-LIGHT REFLECTOR

MANUFACTURER.—THOMAS FOX, 96, Hatton Garden, E.C. These Reflectors never tarnish, require no cleaning, and are the most effective and durable yet presented to the public. All kinds of Dent Glass Silvered.

N.B.—The usual discount to builders and the trade.

RICKET'S & HAMMOND'S VENTILATING GLOBE LIGHT,

combining an agreeable method of lighting, with convenient simple, and efficient ventilation.

The advantages obtained are these—

A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.

A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.

AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.

A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.

5, AGAR STREET, STRAND, LONDON, W.C.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED

TUBE for GAS; Galvanised ditto, for Water; High-pressure Cocks, &c. Manufacturers of Dr. Arnott's Improved Ventilators.

HULETT & CO. 55, High Holborn.

PROTECTION from LIGHTNING.

HART & SON

Beg to call the attention of Architects, Builders, and the public to their

IMPROVED LIGHTNING CONDUCTORS

(SPRATT'S PATENT),

As presenting the MOST EFFECTIVE MEANS of OBTAINING SECURITY from LIGHTNING. They are economical, easily fixed, and APPLICABLE TO ALL BUILDINGS, including Private Houses, Churches, Chimney Shafts, Barrels, Powder Magazines, &c. &c.

Price lists and estimates on application.

HART & SON,

WHOLESALE AND MANUFACTURING IRONMONGERS,

53 to 58, WYCH ST. STRAND, LONDON, W.C

LIGHTNING CONDUCTORS.

R. S. NEWALL & CO. Patentees of the COPPER ROPE LIGHTNING CONDUCTOR, supply the same, with the point and all staples, complete for fixing, at the following prices:—

Three eighths inch diameter.....	1*s.* 6*d.* per foot.
Half-inch diameter	1*s.* 6*d.* ,,
Five eighths inch diameter	2*s.* 6*d.* ,,

R. S. Newall & Co's Patent Copper Rope Lightning Conductor is being applied by architects, engineers, and scientific men, in all parts of the world.

Offices—170, Strand, London.

,, Gateshead-on-Tyne.

,, 97, Dale-street, Manchester.

,, 68, Anderston-quay, Glasgow.

,, 17, South Castle-street, Liverpool

,, Exchange-buildings, Dundee.

,, 7, Frederick-street, Aberdeen.

STEAM-ENGINES, DECK WINCHES,

CONTRACTORS' LOCOMOTIVES, &c.—ALEXANDER SHANKS & SON, ENGINEERS, manufacturers of portable and fixed steam-engines; upright stationary engines (requiring no expense for brick-work or masonry); steam deck winches; portable steam-cranes; and hoisting engines (the latter adapted for loading and discharging ships, &c. and may be placed either on deck or on the quay); contractors' locomotives; water-wheels; turbines; sugar, flour, oil, and bone mills; machinery for pumping, winding, sawing, &c. The most improved machinery and the best materials are used in the manufacture of these engines, mills, &c., and all are carefully tested before leaving the works. Prices list on applicat on

ALEXANDER SHANKS & SON,

DENS IRON WORKS, ARBROATH, N.B.;

and 27, LEADENHALL STREET, LONDON, E.C.

CHUBB'S LOCKS,

with all the recent Improvements,

STRONG FIRE PROOF SAFES, CASH AND DEED BOXES.

Complete Lists of Sizes and Prices may be had on Application

CHUBB and SON,

57, ST. PAUL'S CHURCH-YARD, LONDON,

28, Lord-street, Liverpool; 16, Market street, Manchester; and Horsley-fields, Wolverhampton.

NOW OPEN, YOUNG'S IRONMONGERY WAREHOUSE.

No. 24, Davies street, Three Doors from Oxford-street.

For the supply of Builders, Carpenters, Upholsterers, Smiths, Bell-hangers, and the Trade in general at wholesale prices. In connection with his Old Establishment, No. 18, Blandford-street, Manchester-square, running out of Baker-street, Portman-square, London, W.

IMOPRTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

PICTOR & SON, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

Now ready, in roan back, gilt edges, price 6s (postage 4d.),

THE ENGINEER'S, ARCHITECTS, and CONTRACTOR'S POCKET-BOOK (LOCKWOOD & CO.'S, formerly WEALE'S) for the Year 1863. With Wood-cuts and Eight Steel Plate.

"The present publishers deserve great credit for the improvements which have been introduced into 'The Engineer's Pocket-Book' since it came into their hands. The present edition contains several additions and improvements, and a few well-selected scientific and practical papers, and a number of memoirs of the scientific and other men of late recently deceased. The tables for the reciprocal conversion of British measures of length, superficies, capacity, &c. into metric measure, and similar tables for the translation of measures of weight, which have been much wanted, will be found a valuable addition amongst many others introduced in 'The Engineer's Pocket-Book' for this year."—*Builder*

"Another edition of this old acquaintance has just been issued, and fully merits the estimation in which it has been held for many years. There is much new matter introduced, and the work has been carefully corrected up to the day of publication. It is one of the most valuable books of its class. We strongly recommend it."—*Civil Engineer and Architect's Journal.*

"Contains an immense variety of useful matter." *Builder*

London: LOCKWOOD & CO 7, Stationers' Hall court, E.C.

Now ready, Second Edition, demy octavo cloth, illustrated by Sixteen Plates, price 18s. forwarded free by the Author on receipt of post-office order.

RESULTS of an EXPERIMENTAL INQUIRY into the TENSILE STRENGTH and OTHER PROPERTIES of VARIOUS KINDS of WROUGHT-IRON and STEEL.

By DAVID KIRKALDY, 4, Cumnna-street, Glasgow

London: HAMILTON, ADAMS, & CO.; SIMPKIN, MARSHALL, & CO.; and CHARLES GRIFFIN & CO. New York: SCRIBNER & CO. Calcutta: ROSARIO & CO. Toronto: JAMES CAMPBELL. Melbourne: GEO. ROBERTSON.

OPINIONS OF THE PRESS

"The work before us is a most important contribution to the literature of science, and should find a place among the works for every day consultation in the libraries of all scientific men, and particularly of all to the least degree connected with the manufacture or employment of wrought iron and steel."—*The Mechanic's Magazine 29th August*, 1862.

"This is a thoroughly painstaking, able, modest, and elaborate work, and contains a very valuable addition to the stock of engineering data."—*The Practical Mechanic's Journal, 1st October*, 1862.

"So diverse, suggestive, and, above all, so trustworthy are the facts brought out by this inquiry, that few engineers, we are convinced, will neglect to make them the subject of early and careful study." *The Engineer, 7th July*, 1862

"Its author has done signal service to engineering science, and one that will prove immensely of real benefit to our iron manufacture. Hitherto we have possessed no data on which we mechanically apply of wrought iron to approach the unpretending volume before us in the comprehensiveness and scientific arrangement of its experimental results." *The Civil Engineer and Architect's Journal, 1st April*, 1863.

"The importance of this laborious volume is unquestionable."—*The Builder, 4th October*, 1862.

"The manner in which the work has been done, and the lucid way in which the results are recorded, reflect the highest credit upon the author, and we doubt not that his book will enjoy that large amount of patronage it so well deserves."—*The Mining Journal, 18th January*, 1862

"Mr. Kirkaldy here presents us with a vast amount of information, arranged and classified in a very convenient manner for reference . . . a careful perusal of which we commend to all practical men engaged in the useful employment of steel and iron, and to the scientific world at large."—*The Artizan, 1st August*, 1862.

"The institution could not be too grateful to Mr Kirkaldy for his labours; for he had collected a mass of facts which were of the highest value in a scientific and practical point of view."—*Proceedings of the Institution of Engineers in Scotland, 18th November*, 1862.

Now ready, in One Volume, and neat cloth, price 7s 6d illustrated by numerous superior Wood Engravings,

LONDON SCENES and LONDON PEOPLE. Anecdotes, Reminiscences, and Sketches of Places, Personages, Events, Customs, and Curiosities of London City, Past and Present. By ALEPH.

W. H. COLLINGRIDGE, City Press, 117 to 119, Aldersgate-street, London, E.C.

Seventh Edition, Tenth Thousand, price 3s. 6d., free by post, 42 stamps,

DISEASES of the SKIN: a Guide to their Treatment and Prevention, Illustrated by Cases.

By THOMAS HUNT, F.R.C.S. Surgeon to the Western Dispensary for Diseases of the Skin, 214, Charlotte-street, Fitzroy-square

"Mr. Hunt has transferred these diseases from the incurable class to the curable" *Lancet*

London: T. RICHARDS, 37, Great Queen-street.

THE "OIL and COLOURMAN" (weekly) is of great value to ALL ENGAGED IN TRADE. ONE PENNY. HENRY VICKERS, Strand; and all News Agents.

BRYCESON'S ORGAN FACTORY, 9, BROOK STREET, KUSTON ROAD, LONDON, N.W. Established 1796.—Apply for PRICED CATALOGUE of St. Cecilia, Scudamore, and other Organs, usually in Stock. Also as to the Tuning, &c of Organs in all parts of the country. Church Organs of any size built, enlarged, or revised, as well as removed and WAREHOUSED DURING RESTORATIONS PRIZE MEDAL, 1851.

LEIGHTON, SON, & HODGE beg to intimate to Publishers, Printers, and the Public generally, that they execute in the best style and on the most moderate terms every description of WHOLESALE BOOKBINDING, either in Cloth or Leather (also Account-book Binding), with the utmost punctuality. Their stock of ENGRAVED BRASS RULE is most extensive and varied, and designed in the best taste, and their powerful machinery and steam power give them great advantages in the rapid execution of large orders.

Applications for estimates will meet with prompt attention.

LONDON: 13, SHOE-LANE, E.C.

KEY and TREENAIL and GENERAL CONTRACTOR'S BUSINESS TO BE DISPOSED OF, with blacksmiths', wheelwrights', and carpenters' shops in connexion. The premises are situate about sixty miles from London, near a railway station, and comprise the gas-engine, saw benches, and machinery complete. A portable steam engine, and new rick and other benches for out door work. No other keyand treenail business in the district. Immediate possession. Satisfactory reasons can be given for leaving.—Address, W. S Post-office, Weedon

IMPORTANT to PAINTERS, PLUMBERS, &c.—TO BE DISPOSED OF, a BUSINESS in the above line Terms moderate. Good town, 30 miles from London. Premises comprise 2 shops, parlour, 2 bedrooms, kitchen, and good garden Rent low.—Apply to W. H. R. Post office, Richmond, Surrey.

WATERPROOF CLOTH and FLEXIBLE HOSE MANUFACTORY.—TO BE DISPOSED OF, the LEASE of Extensive PREMISES, together with the valuable Plant and Machinery and Goodwill of the Business.—For particulars apply to Messrs. PRILE & CLARK, Auctioneers and Estate Agents 2 and 3, Chancery lane.

TO PLUMBERS, PAINTERS, &c.—A Good BUSINESS, on the South Coast, established upwards of fifty years, TO BE DISPOSED OF, owing to the Death of the Proprietor. Rent of premises moderate, and stock and incoming low. Apply to Messrs. WATSON & CO. Glass Merchants, 11, Cook lane, Queen-street, Cheapside

SANITARY PIPE BUSINESS TO BE LET. TO BE LET, with immediate possession if required a first-rate GLAZED SANITARY PIPE and STONEWARE MANUFACTORY, now in full operation, situate at Moor-lane, Brierley hill, Staffordshire. It has excellent wharfage on the Stourbridge Canal, adjoins the Kingswinford branch of the West Midland Railway, and the road leading from Stourbridge to Dudley. It is situated in the midst of the coal, clay, and iron district, and has every convenience for extending the trade. The present proprietor is retiring from business. This is a rare opportunity for an enterprising man.—Apply on the Premises, or to GEORGE WASSALL, Brierley-hill, Staffordshire.

TO BE DISPOSED OF, a small INTEREST in an old-established and proved first-class (L.L.C.) SLATE QUARRY in Carnarvonshire, offering rare advantages as a safe and genial investment. the quarry being held by only a few shareholders. No share has hitherto been offered to the public, nor can any others be procured. Satisfactory reasons will be given for desiring to dispose. Address, H. P. F. Post-office, Carnarvon.

TO BUILDERS.—TO BE DISPOSED OF, an old-established BUSINESS, in a good town near London, and close to a railway station. The house and premises are situated with every convenience for carrying on the above business in all its branches, the present proprietor being about to retire from it.—For full particulars apply to Mr. BROWN, 223, Shoreditch.

NOTICE.—For Church Work, Libraries, Halls, Schools, Offices, Railway and all Public Buildings.—IMPORTANT to BUILDERS. MEADS'S PATENT ROYAL OAK STAIN, to be had of T. J. HOGG, 3, Brunswick-place, City road; and at the Works, Aldridge, Essex. 8s per gallon. Post orders will have best attention and advice. Those who have not yet used the above should do so; the improvement is great and far surpasses anything else ever seen, the effect being very superior, giving a rich, mellow finish to the work, entirely surpassing paint, it therefore merits special attention from the Trade. See also MEAD'S PATENT SATIN WOOD, MAHOGANY, WAINSCOT, WALNUT, which are highly valued by Furniture and Picture Workers.

GREENHOUSES! GREENHOUSES! WANTED, SEVERAL NEW or SECOND-HAND, Large, cheap, with or without glass, to be delivered to the South-Western Railway.—Address, lowest price to Mr. ANDERDON, Stockbridge, Hants.

WHARFAGE, &c.—Goods of every description (Timber, Stone, &c.) Landed, Shipped, Warehoused, and Carted. Part of the Wharf with Counting-house and Stabling, TO LET.—Western Wharf, Abingdon street.

BOOKCASES in MAHOGANY and WALNUT; Sideboards with Plate-glass Backs, massive Dining Tables, Ladies' Wardrobes, with long Plate Doors and Glass Panels; Inlaid Cabinets and Coiffonnières, Easy Chairs, &c. A variety of new designs of the above articles, and of the best manufacture, on inspection in the extensive Show-rooms of ROBERT FISHER & CO.; Cabinet makers and Upholsterers, 56, Fetter-lane, corner of Fleet-street, Fleet-street, corner of Finsbury square.—N.B. Magnificent designs in drawing and dining-room carpets, 2s 9d and 3s per yard. Marble top Wash-stands, 23s. Walnut Drawing-room Suites, covered in Velvet, 13 Guineas.

TO IRONFOUNDERS, BUILDERS, AND OTHERS

GOOD ROAD SAND, from all Gravel, and laid some time in heap, suitable for Ironfounders' work, to be had at 6d per cart's yard, of H. ASHMOLE'S, Builder, Hford, Essex, seven miles from Whitechapel.

SAW and PLANING MILLS, with Steam Power, situate near the East and West India Docks, TO BE LET or SOLD. The machinery consists of a 15-horse power steam engine, two deal-sawing frames, pulling up bench and a planing machine by Worm, with driving shaft, &c.; large yard and building. For further particulars apply to Mr. GRIST, (owner to the Live Mr. Burge), Auctioneer and Estate Agent, No. 78, King William street, Mansion House, E.C.

BENJAMIN EDGINGTON'S MARQUEES and PAVILIONS for royal and noble parties for the season 1863. Rich Cloths, with poles, &c. complete; new and second hand. Seating and Raising for Fêtes; Garden seats, &c. A number of Lamps used at the royal wedding to be sold as second-hand.—Address, BENJAMIN EDGINGTON, 7, Duke-street, Southwark, foot of London Bridge, S.E. No other establishment.

BALLAST for SALE. A Quantity lying in SPENCER ROAD, YORK ROAD, UPPER HOLLOWAY

For terms apply at the HOUSE ADJOINING.

IMPORTANT to HYDRAULIC CEMENT MAKERS.—SAMPLES of a MATERIAL of great value in the above Manufacture may be had on application to E. PECHEY, 20, Lancaster street, S.C.

TO NOBLEMEN, GENTLEMEN, and ANTIQUE DEALERS.—RALEIGH HOUSE, opposite the Old White Horse, Fulham.—TO BE SOLD, a Fine Carved Old Oak Elizabethan CHIMNEYPIECE, and the Oak Panelling of the room to match, with pilasters and carved capitals, and Statuary Marble Chimney-piece.—Apply at the Mansion, now pulling down, as above. formerly the residence of Sir Walter Raleigh.

POLYTECHNIC.—All the Lectures and Entertainments as delivered before their Royal Highnesses the Prince and Princess of Wales, the Prince and Princess of Hesse, Professor Pepper's Ghost Lecture, Saturday at 4 and 8, and every other day at half-past 1 and 8. Von Weber's Grand Opera of "Der Freischütz." Engagement of Herr Sussin for his remarkable imitations of birds and other animals. Entirely new series of descriptive Views of Paris, the Poles, with lecture by J. Mullard, Esq. describing the Ride and Wreck of that Country. Phantasmic Wonders by J. L. King, Esq. N.B.—The Ghost Illusion was invented by H. Dircks, Esq. C.E. and has since been improved and patented by Messrs. Dircks & Pepper.

The Builder.

VOL. XXI.—No. 1064.

The Right Use of "Models" in Architecture of our Time.

IN the assertions which, during the present state of architecture, are volunteered in place of sound criticism, there is no fallacy more persistent in showing itself, than one that concerns the use of examples. It rears its head not less venomously for having been scotched some hundred times. The public who proclaim that they "know nothing about architecture," but that they "know what pleases" them; orators in the House; writers in the newspapers; the architect's patrons, lay and clerical; and far too large a number even of those calling themselves architects, and who therefore should be *artists*; are constantly found crying for some one thing, a work or a style, to be applied by them, not so much to the proper use of examples,—that is in the way of lessons, conducing to good art, and often by showing what to avoid,—as in the way of things to be moulded from, to be followed, to be imitated,—in short, to be copied, actually, however non-confessedly or non-ostensibly. This absence of perception of our *art*, is shown by the common phraseology of persons expressing disapproval of a particular design, that the work is in "no style," or that it is "unlike anything ever seen before;" whilst it is quite clear that the work can have no merit as art, unless it be to a certain extent *unlike*. We have written too much on the danger attending an engrossing pursuit of novelty, to render possible any misconception of our meaning. Novelty is an essential element in *art*: more than this, we have little present need to say.

The sections of the public to whom we have adverted, are forgetful that *art* is not the reaching up to the excellence of particular models,—be they even the best,—not more, a combination merely, of the elements of all,—but is a combination and utilization *plus* a reaching from the "models," to the grasp of something new and beyond. Suppose that portion of the architecture of the Louvre in which the Caryatides are introduced, to be the finest composition possible for an attic, or the crowning story of a pavilion; reproduction of the composition would, we maintain, be opposed to the very principle of art, as well as unworthy of a nation. That which is once done with good result, becomes a standard of excellence: future works must go beyond this recorded standard; or they must avoid all chance of its suggesting itself in a comparison with them. Be they equal to the standard, or reproductions, or be they inferior to it, they are alike deficient in the most important quality and object of architecture, namely, art. These are truths; and to contradict the assertion of them, is to yield up the practice of architecture at once and altogether.

The *métier* of an artist, indeed, is not to explain what should be done. The purpose, or mission, of the branch of art, is the *production* of works, rather than the exposition of the manner of producing them; which explanation, moreover, is not within the scope of language. It is forgotten, as repeatedly it is,—and as repeatedly we have had to say,—that there are not terms capable of conveying the exact meaning required in speaking of, or describing, particular works, or in pointing out in detail the course which should be taken in the production of a good design. The *Times'* correspondent writing from the battle-field of Chancellorsville, more than doubts his ability to describe features of the ground,—debarred as he was from the use of a plan, which would have explained the movements of the armies immediately. Drawing holds a similar essential position, as informing medium, to architecture. We can only say, looking to some of the terms used in want of those which would be accurately descriptive, that "model" is not something of which only a cast is to be taken; and that "imitation" is not the mere production of a *fac-simile* or an adaptation. Without then for a moment considering that mere originality is *art*,—as some architects consider, judging from their designs,—we only admit, as we have said, the originality as a requisite, whilst urging a certain utilization of *models* likewise.

But it is curious to note how the greatest efforts to set these which we have called truths, before readers, are met by persistent obliquity in the vision of what constitutes art, and of what should be the course taken by such a journal as our own. Scarcely any style of architecture existent in remains of buildings, has failed to have its admirers, who have become copyists of it; and scarcely one of the succession of styles has failed to be pointed out to ourselves as deserving our exclusive illustration and advocacy. We find that an English art-journal is not the only instance of this position. French architects, it seems, there are, who can make the demand for models exclusively of a style or class, and treat lightly opportunities for gathering the lessons which are derivable from examples of every class; and in France, where more than in other countries, we believed it was *art* that was the thing appreciated, our profession seems to have yet to grasp the full idea of what the thing is, and to find out that the knowledge of examples is but subservient.

Few have written so well in either country, on the æsthetics of architecture, as M. César Daly, starting with the first volume of his *Revue Générale de l'Architecture*, three or four and twenty years ago, at a time when some of those who now may be considered as contributors to progress, had scarcely dipped pen in ink. Yet, M. Daly has not escaped a demand from a section of his readers, for something to be followed. He has deemed it necessary to reply to two objections in particular, brought against his manner of conducting his review.* These objections were not by any means undeserving attention. We have some interest in noting what they were, and the terms in which they have been replied to; and we believe similar interest should be taken by all who feel themselves concerned with the condition of architecture in this country, whether they be considered as readers of our journal or not. It seems that, as in this country, so in France, the art is deemed to be in a state of confusion; and the existence is supposed to have been discovered, of minds wanting in decision, and needing to be sustained and guided in the right path. Frenchmen who hold the views referred to, of the character and tendencies of the epoch in art, therefore, have asked the editor of the *Revue*, how it was that he could "consent to publish fragments of art taken from all periods without distinction;" and why, "being able to choose amongst so many fine models," he gave "modern works," such as now and then were "far from being irreproachable." In his reply, M. Daly first examines the main question relating to an indecision resulting from the absence of generally-accepted principles,—or, absence of faith, national or of race, in the matter of art; and then he shows what would be consequences of, and what ought to be the course opposed to, *exclusivism*. He concludes that liberty of the artist is the sole way of safety for the art, and that Liberty is begotten of Science. As to sustaining the undecided, and guiding them, he asks whether all would agree as to the path leading to the truth. Is the course, he asks, to be on the side of antiquity, or the Middle Ages, or the Renaissance? Supposing it to be said, it is to the Renaissance we should tend, is it to the Italian style of the Medici, the French of Louis XII. and Francis I., or the English of the Tudors? Should not other epochs be allowed to prefer their rights, as those of the Louis, from the thirteenth to the sixteenth of the name? And the East, with its art so luxurious, at once so sparkling and so harmonious in colour, that like barbarians we stand amazed with it; would it offer nothing for imitation? Would there not be, on the contrary, there, some path in which it might also be well to guide the undecided steps of the artist? These questions, the editor of the *Revue* intimates, go especially to those who demand of the past, æsthetics, and a style, for the present,—the eclectics being able to do no more than applaud liberalism, and innovators being bound to do as much. Of accord for the denial of all new art, the historic schools of architecture are condemned also, under pain of perishing, to deny one another; for, a classic who would make a concession to the Gothic school, for example, would cease to be a classic: he would enter at a bound, into the camp of the eclectics. Should it be from this atmosphere of intolerance and negation, that we should obtain the bright flame destined to show the path of the true, the beautiful, and the useful? M. Daly is persuaded, as we are, of the contrary; and he has "the conviction that to cause architecture to prosper in these periods of trial, the efforts of all are useful—even necessary,—that we must not repulse any worker." He would plead the cause of all the historic schools against the exclusive pretensions of each; for, all have rendered great services to art. "It is by their parallel operation," he well observes, "that studies of comparative architecture have become possible, and that we are even able to raise ourselves to the grand questions of the general physiology of architecture." Unfortunately, these good effects, he continues, have been enfeebled by the exclusive spirit appertaining to the historic schools. That spirit was inevitable until the unity of the architectural movement in its progression under diverse forms, through different ages, had become suspected; but it might now form, for the art which ought always to be progressing, a barrier difficult to be got over.

The consequences of *exclusivism* are distinguished by M. Daly, as those which are "intellectual," and those which are "moral." As to the intellectual consequences, before stating the case as affecting architecture, he refers to the knowledge of languages. He who knows only one language is the slave of that language: he who knows several languages, on the contrary, is their master. Amplifying the saying of Charles V., that he who knew only one language was but a man, whilst that he who knew three languages was worth three men,—he says:—

> "He who knows but one language, but one literature, really knows but one people, and partakes of the prejudices of it. The partial or very restrained knowledge can then become a source of errors. One would judge ill, in effect, of a physiognomy, of which one saw but the profile.
>
> Every book is a strong-box. To appropriate the contents of it, a key is necessary, that is to say the knowledge of the language in which the book is written. The more one knows of languages, the more keys one has, and the more treasures of truth one can open or draw: the better one is protected from error,—prejudices of peoples destroying themselves always, those on one side by those on the other."

Applying these truths to architecture, he says:—

> "Every system of signs, of symbols, of representations, having for its effect to express the sentiments, or to put the intelligence of men in communication, is a language. Architecture in this point of view is also a language, but a language that has undergone as many revo-

* "Nos Doctrines: Réponse à Deux Objections adressées à la Direction de la *Revue de l'Architecture*."

lutions and radical transformations as its history presents distinct styles.

The architect who has studied but one style of architecture, is like a Frenchman knowing only his maternal tongue: he is the slave of that style, which imposes itself upon him each time that he tries a composition of art.

And this tyranny is so entire, that possessed himself by a form of art of which it is impossible for him to shake off the yoke, he is able to possess in return this form of art, only by an incomplete knowledge: *he* is then possessed, but he does not possess. The same in effect as a Frenchman totally ignorant of Latin, is only imperfectly master of his national tongue, the architect who occupies himself with but a single style of architecture, can know it only very incompletely, ignorant as he is of the origin, of the first cause of existence, and of the successive transformations of a series of the forms of art that his style of predilection has received by tradition of styles anterior.

Is it not that the knowledge of the rules of grammar or of the general philosophy of languages, gives a know edge, an appreciation more perfect, of the special grammar of each tongue?

In the same manner, and *à fortiori*, can one demand if it be possible to possess thoroughly a particular style of architecture, when one has remained absolutely stranger to all the other historic styles of that art?"

It may be seen that this, with which we can thoroughly agree, would not be at all inconsistent with the advocacy of the *practice* of but one style; and on that subject we should expect to find M. Daly in accord with us.

As to the moral consequences of *exclusiviem*, M. Daly says:—

"The knowledge of a single style of art creates the exclusive love of that style. The artist with the heart the best endowed, with intelligence the richest, becomes then naturally sectary, man of party. He knows in effect, only the beauties and the merits of the style of art which he has studied; he ignores the merits and the beauties of other styles.

The knowledge of all the styles, on the contrary, renders the artist tolerant, because that he is initiated in the resources belonging to each style."

He says that studies that have the character of universality, create *enthusiasm*; whilst very restrained and special habits of mind lead to fanaticism. The patriotism of a man who has travelled, will be a nobler feeling than that of him who has never quitted home.

"Enthusiasm illumines; fanaticism renders gloomy. The first knows; the second ignores.

Enthusiasm contains affection; fanaticism carries in itself hatred. Enthusiasm is fruitful; fanaticism is sterile.

In fine, fanaticism conciliates itself with slavery: enthusiasm desires liberty."

Without falling into the extravagance of regarding every classic as a fanatic, or every eclectic as an enthusiast, our friend desires merely to show where one of the doctrines would find logically its end, and what is the career opened to the other. Fanaticism in favour of an exclusive style of the past, lately active in France, he perceives, however, has become much calmed through the obligations of modern life, and from the demand upon architects for the *rédaction* and rapid execution of numerous *projets*. Through these circumstances, architects have become penetrated with a larger and more tolerant spirit, so that to the greater part of those who still repulse the doctrine of eclecticism,—for want of comprehending that it is necessarily the doctrine of every period of transition, and of such period only,—doubt at least has supervened as to the final efficacy, that is to say the durable *renaissance*, of the style of their predilection.

The architect of our day, says M. Daly, can contemplate the promised land of art, and know which way to direct his steps, only on the condition of passing over all the steps of the pyramid that the genius of architecture has successively elevated since the commencement of the associations of men. Master of all styles, or at least initiated into the sentiments they express, the architect, if he be but an erudite and intelligent man,—a man of taste whom the ardent flame of poesy has not touched,—will reproduce the past; but he will do so by choice, and introducing the transformations which the knowledge at once of ancient and modern things, will dictate to him. But with genius, he will not rest on the isthmus of passage from the old world to the new: he will create,—going forward to the land whose existence presents itself, though it is figured not as yet upon the maps of the geography of the art. In either case, man of knowledge or creator, the architect amiliar with the history of his art will march at least in full light, and in the entire possession of his liberty; for, "Liberty is the daughter of Science, whilst Slavery is born from Ignorance." On such considerations, M. Daly justifies his editorship comprehending the review of the entire past, as facilitative of progress in the right path.

"The past forms the *detritus* which redoubles the active fecundity of the present, and prepares the rich harvests of the future. The past, moreover, contains the germ of that which is to be, as the acorn contains the oak, as the child at the mother's breast contains in strength the man enjoying the plenitude of his faculties. But it is the entirety of the past that contains this germ, and not any fragment whatsoever,—neither one sole race, nor one sole country, nor one sole epoch, nor one sole historic style."

M. Daly not merely will continue to give in the *Revue* "fragments of art taken from all epochs," but in addition to his work on the architecture of Paris in the time of Napoleon III., he announce, as about to appear, a special publication of fragments of different dates, from the commencement of the Renaissance in France, to the end of the reign of Louis XVI. He admits that he has given in the *Revue*, modern works that are not irreproachable, but defends the course, seeing that he is conducting a work which is a review of contemporary architecture. He asks whether the publication of admirable works alone, and the registration of the architectural movement, are always reconcilable.

It is interesting to note the account of the changes that have supervened in France, since 1839, when the *Revue de l'Architecture* was established. At first the old Classic school dominated with the tyranny of confident ignorance. The few *ateliers* where something new was sought, even though in the unworked veins of antiquity itself, were reputed to be dangerous and detestable disseminators of revolution. The Mediæval school next flamed in the architectural sky; and it also, in its turn, tried, for a moment, to play the little despot. But at this hour, no school predominates in France over the others; no one of the constellations of architecture shines with an exceptional splendour; and in spite of some isolated stars, and individual masters, there is equality in the different groups, which will soon form, under the influence of eclecticism, merely a general nebulosity, but one from which sooner or later a new sun will disengage itself,—the resplendent sun of future art.

There is much in these views and statements, that should be interesting to those who watch the growth of architecture, the art, on this side the Channel. The reasoning that we have tried to condense is in harmony with our own; and readers of the *Builder*, without assuming there is nothing to be said on our own part, especially in emphasis of our long-since-proffered arguments in favour of practice of some one nominal style, whilst of the study of all styles in their individuality, as in their influences derived and exerted,—in short, in favour of a certain unity, helping to the public appreciation of architecture, and perception of the *art* in it, but in favour of a gathering, by architects, from every ground,—would not be much mistaken in reading the words of M. Daly as those we might use, were our own course of proceeding the matter in debate.

JOHN GWYNN, R.A., ARCHITECT.

A BIOGRAPHICAL SKETCH.

WHEN about to prepare, for the "Dictionary of Architecture," the necessary account of the professional works of this architect, I failed to find more than a very brief notice of some bridges attributed to him. After many inquiries I was directed to what appears to be the only available memoir of Gwynn. This is given in the "Biographical Illustrations of Worcestershire," by John Chambers, 8vo., Worcester, 1820, pp. 504-6. As this account of him is all but unknown, and as the works, attributed to Gwynn, are also but little known to biographers in general, I have incorporated the material obtained in my own researches, and the information most kindly obtained by many friends residing in the localities of the several works, with the above account, in the endeavour to produce some better memorial of this architect. Even in the "History of the Royal Academy," published last year by William Sandby, a very meagre memoir is given not only of Gwynn, but of the other architect Academicians; though he might have availed himself of the earlier volumes of the *Builder* for much valuable material; and might even have had a glance at a few of the names already given in the "Dictionary" above mentioned.

I have entirely failed, for reasons hereafter explained, in obtaining the year of Gwynn's birth, and any account of his early life. Shrewsbury is stated as the place of his birth, on the copperplate set in the first stone of the "new bridge" in that town. A local antiquary notifies to me that, "after much inquiry, I could never ascertain the time of his birth: the parish registers here have been searched, but hitherto without success." In the course of the perusal of several works for the purpose of this memoir, I noted that Dr. Adams, afterwards Master of Pembroke College, at Oxford, was an old friend of Dr. Johnson's, and had been rector of St. Chad's, Shrewsbury. Is it not likely that the parish of St. Chad's was Gwynn's birthplace, and that Dr. Adam's acquaintance with him led to his introduction and employment at Oxford, as will be shown hereafter? This is the more probable as a Samuel Gwynn, who died in 1790, aged sixty-three, is with his wife and three children, buried in St. Chad's churchyard. But there is no proof of any connexion with them,—and another family of the same name was living in Shrewsbury at the same period, whose descendants do not claim relationship with John Gwynn. The Rev. Hugh Owen, the author of the "History of Shrewsbury," 4to., 1810, who supplied the memoir to Chambers's work, writes, "I very well remember Gwynn when I was a boy . . . and I have often heard him call himself a native of Shrewsbury, which place I believe he left in early childhood." Boswell, in his "Life of Dr. Johnson," is quoted by Owen for the statement that Gwynn "was of a respectable family long settled in Shrewsbury, and which is not extinct there yet. Who his father was I know not."

The earliest notice of his name I have discovered is attached to his first publication, an "Essay upon Harmony as it relates chiefly to Situation and Building," 8vo., London, 1734; and if my notes are correct, another edition appeared in 1739. A copy of this work has not come under my notice. The next mention of it is also in regard of the publication of "An Essay on Design, including Proposals for Erecting a Public Academy to be supported by Voluntary Subscription (till a Royal Foundation can be obtained) for Educating the British Youth in Drawing and the several Arts depending thereon," 12mo., 1749, price 1s. 6d. In this year he also published a small plan, being a reduced copy of that by Sir C. Wren, for rebuilding the City of London after the fire of 1666, as mentioned in his subsequent work, "London and Westminster," &c. This plan I have not seen: it is sometimes said to have been attached to the "Essay on Design," &c.; but it is not to be found in the copy of that work in the libraries of the Royal Academy and of the South Kensington Museum. In 1752, he published a third work, "Qualifications of a Surveyor," 8vo.; not seen by me; and in 1755, he published, in conjunction with Samuel Wale, the engraver, afterwards a brother Academician, the well-known large engraving of the Transverse "Section of St. Paul's Cathedral decorated according to the original intention of Sir C. Wren:" this was engraved by E. Rooker; the decoration and sculpture being attributed to Wale,—who, Owen says, was a designer of book-plates; died in 1786; and who was often assisted by Gwynn in the architectural parts of his backgrounds,—Gwynn at one time residing in the same house with him. Sandby adds, that Wale "was of service to him in the literary part of his publications." Besides being an Academician, Wale was the first Professor of Perspective in that establishment. This plate is so well known to the profession, and forms so good a decoration over the chimneypiece of the Council Room of the Royal Institute of British Architects, that it will require no further notice, with the exception that the statement on the plate is corroborated by a reference in Gwynn's last work (p. 118), who notes his acquaintance with Stephen Wren, from whom he probably obtained the memoranda of Sir C. Wren's original ideas for decorating the interior of the Cathedral. Owen says, "This section was drawn, I believe, from actual measurement: its companion print, an elevation of St. Paul's, was begun to be engraved by Lowry, who never completed

it." In this year (1755) Gwynn was associated with Isaac Ware, James Payne, Thomas Sandby, and others, as a committee for carrying into effect the proposed "Royal Academy of London for the Improvement of Painting, Sculpture, and Architecture."

At this time Gwynn must have been rising into notice as something more than a mere writer and publisher of a print: Owen says, "He was never largely employed as an architect, though he possessed unquestionable talents and considerable taste." The first portion of this remark will perhaps be considered erroneous when the reader comes to the conclusion of this account, as the following remarks would rather tend to prove a large occupation. Soon after 1755 Sir William, then only Mr., Chambers, was introduced to the Prince of Wales, afterwards George III.: the introduction "originated in an accidental occurrence. Mr. Joshua Kirby, having been appointed by Lord Bute to instruct his Royal Highness in the principles of perspective, his lordship intimated to Kirby that a preceptor was required to instruct his Royal Highness in architecture. Kirby immediately consulted his friend Gwynn, a very eminent and ingenious architect, who erected several public buildings in and about London. [If he did, they are not known.—W. P.] Kirby solicited Gwynn to undertake the proposed honour; but Gwynn, with great modesty, declined the proposal, observing to Kirby, in his usual unassuming manner, 'that he (Gwynn) had never been solicited to attend at court; but if allowed to offer an opinion for selecting a proper person, qualified to give the Prince instruction in architecture, he would recommend Kirby to apply to Mr. Chambers, who had lately returned from Italy, and had acquired great taste and knowledge; which, combined with his accomplished manners, rendered him the most eligible person to be selected for the purpose.' On this recommendation of Gwynn's, Mr. Chambers was shortly afterwards introduced to Lord Bute; and from this, his early patronage at Court, with the assistance of influential friends, he commenced his career as an architect of the first eminence."—Mulvany, "Life of Gandon," 8vo., Dublin, 1846, p. 162.

The year 1759 brings forward the first actual professional work by Gwynn. The City of London advertised for designs for a new bridge over the river Thames at Blackfriars. The advertisement appeared in August:—

"The committee for building a bridge from Blackfriars . . . will meet at Guildhall on Thursday, the 4th day of October . . . to receive all such plans, elevations, and estimates for a stone bridge, as any person or persons shall then think fit to offer for their consideration."

On November 1st (about ten weeks being allowed) upwards of fifty plans and models were submitted to the committee. A notice (valuable for its detail) in the following year, January 12—15, shows that the

"Designs . . . reduced to eleven, are those that have been presented by the following gentlemen:—
Mr. Chambers, Surveyor of the Works to her Royal Highness the Princess Dowager.
Mr. Ware, Draughtsman to the Board of Works; two designs.
Mr. Gwynn, known by his drawing of the section of St. Paul's.
Mr. Milne, who finished his studies in Italy.
Mr. Barnard, who built Kew Bridge.
Mr. Smeaton, who lately rebuilt Edystone Lighthouse.
Mr. Phillips, a builder; three designs.
Mr. Dance, the City Surveyor."

Ultimately three designs were selected: two of these had semicircular arches (one of them being by Gwynn), and the other had elliptical arches: this was by Mylne, and was the design subsequently carried out. "At this time," says Boswell, in his "Life of Dr. Johnson," Croker's edit., p. 118, "there being a competition among the architects of London to be employed in the building of Blackfriars-bridge, a question was very warmly agitated whether the semicircular or elliptical arches were preferable. In the design offered by Mr. Mylne, the elliptical form was adopted; and, therefore, it was the great object of his rivals to attack it. Johnson's regard for his friend, Mr. Gwynn, induced him to engage in this controversy against Mr. Mylne; and, after being at considerable pains to study the subject, he wrote three several letters in the *Gazetteer* in opposition to his plan." These letters appeared in the *Daily Gazetteer* of December 1st, 8th, and 15th, 1759, with answers to them. This paper is not in the British Museum Library, but a long account of the controversy will be found in the "Life of Dr. Johnson," by Sir J. Hawkins, 8vo., 1787, pp. 373-8. It is said that the committee of selection were unanimous in their choice of Mylne's design, and that there was a considerable opposition, out of doors, of elliptic *versus* semicircular arches: probably Mylne's design was the only one of the former shape, but I have not seen any statement that it was so: the novelty may have produced more than its share of the excitement. The approved design was submitted to eight of the leading scientific professors of that day; who reporting favourably on the principles displayed, it was eventually adopted and executed. This bridge, it is scarcely necessary to add, is on the eve of destruction from its now total unfitness for the overgrown traffic of the metropolis, as well as on account of its somewhat unsafe state, owing to the undermining it has experienced from the increased scour of the river.

In 1761 he added to his publications a fourth work, entitled "Thoughts on the Coronation of George III.," in 8vo., of which I have not been able to meet with a copy: this was "corrected by Johnson" (Boswell); and in 1766 he produced his fifth publication, entitled "London and Westminster Improved, Illustrated by Plans. To which is prefixed a Discourse on Publick Magnificence; with Observations on the State of Arts and Artists in this Kingdom." 4to., London. To this work Boswell refers, when he wrote,—

"He [Johnson] published nothing this year in his own name; but the noble dedication to the king, of Gwynn's 'London and Westminster Improved,' was written by him."

To this observation Croker has added, in a note, p. 181,—

"In this work, Gwynn proposed the *principle*, and, in many instances, the *details*, of the most important improvements which have been made in the metropolis in our day. A bridge near Somerset House—a great street from the Haymarket to the New-road—the improvement of the interior of St. James's Park—quays along the Thames—new approaches to London Bridge—the removal of Smithfield market, and several other suggestions on which we pride ourselves as original designs of our own times, are all to be found in Gwynn's able and curious work. It is singular, that he denounced a row of houses *then* building in Pimlico, as intolerable nuisances to Buckingham Palace, and of these very houses the public voice now calls for the destruction. Gwynn had, what Lord Chatham called 'the prophetic eye of taste.'"

[A correspondent of *Notes and Queries*, ser. I, xi. 406, referring to the publication in question, by Gwynn, attributes this last remark to Mr. D'Israeli.] This book remained apparently in obscurity, until the *Literary Gazette*, No. 473, of the date February 11th, 1826, p. 93, and No. 532, March 31st, 1827, p. 202, drew attention to the apparent prophecies and the proposed alterations for the improvement of the metropolis contained in that work; which gave a renewed value to it, caused it to be sought for in the trade, and has now rendered it a somewhat scarce book. A copy is in the library of the Institute: it is well worth a perusal for the sensible and practical remarks contained in it, as well as for the clearly written style of the observations laid before the readers. Hunt, in his "Tudor Architecture," 4to. 1830, p. 23, also endorsed the opinion of the *Literary Gazette*:—"It is a singular fact," he writes, "that in this work John Gwynn pointed out almost all the designs for the improvement of London which have been *devised* by the civil and military architects of the present day." Owen says:—"It is supposed that his friend Johnson wrote, or at least greatly assisted him in writing, 'London and Westminster Improved,' the materials of which were his own. . . The dedication Johnson *certainly* wrote." Most probably all Owen's knowledge of this matter was obtained from Boswell's account above noticed. In this year also (1766) he was one of the many artists who signed the roll of the "Incorporated Society of Artists of Great Britain;" the other architects being W. Chambers, G. Dance, J. Donaldson, John Donowell, Joseph Gowpy (Goupi?), Charles Middleton, James Paine, John Platt (Plaw?), W. Tyler, and John Vardy. This society, the forerunner of the Royal Academy of Arts, held its first exhibition in the rooms of the Society of Arts, &c., in the Adelphi, in 1760, and the eight succeeding ones at their rooms in Spring-gardens. In the first year Gwynn exhibited "A Design in Architecture for the Reception of the Arundel and Pomfret Collection of Antique Statues, Busts, &c., in the University of Oxford;" and "One of the Three Designs for a new Bridge at Black Fryers, as presented to the Committee." In 1761 "A Design for a Triumphal Arch, in lieu of a transitory firework, to celebrate the successes of the present War, and the re-establishment of Peace. *Note.*—The said arch may be commodiously erected either at Hyde-park-corner, or Holborn-bars, supposing Middle-row as a public nuisance taken away." (Mem., a *public nuisance* also in 1863!) In 1762 "A Design for a Bridge at Blackfryars," in 1763, "A Sketch of Part of St. Paul's;" in 1764, "Section of St. Paul's through the middle as high as the Peristyle of the Dome, Decorated" (was this the drawing for the engraved section already noticed?); in 1766, "A Drawing showing what is proposed for finishing the East End of St. Paul's, the Historical Part by Mr. Wale;" and in 1768, "Two Designs for a Bridge over the Severn at Shrewsbury." He did not exhibit in the years 1765 and 1767. These particulars of his earlier designs have been obtained from the catalogues of the society, a complete set of which are fortunately preserved in Sir John Soane's Museum: the British Museum only possesses the catalogue for the second year, 1761; while the Royal Academy, where one would expect to find a set, has not, I believe, a single copy.

In the year 1768, on the foundation of the Royal Academy of Arts by King George III., Gwynn had the good fortune to be nominated a Royal Academician, together with William Chambers (treasurer), Thomas Sandby, and George Dance, the younger. I say, the good fortune, for what works he had executed to have had that honour bestowed upon him are not indicated by the foregoing list; and there were some few other architects who from the number of their productions would have more merited the distinction, such as James Paine, for one. I think "friendship" must have had something to do with it. It was not until many years subsequently that the system of "diploma drawings" being deposited with the Academy was introduced, so that the institution does not possess any specimen of his talents.

In 1769, at the first exhibition of the Royal Academy, he had a drawing of "Alterations of an old Room in Shropshire," at which time he was, and had been for a few years, living in Little-court, Castle-street, Leicester-fields. In this year, June 29th, was laid the first stone, from his design, of the English, the East, the Stone, or the New Bridge,—for by all these names it has been described,—at Shrewsbury, over the river Severn.

"The extent of the bridge is 400 feet. It is built of the fine stone of the Grinshill quarry, on seven semicircular arches, crowned with a fine balustrade. The central arch is 50 feet in width, and 40 feet in height, from low-water mark. The two arches at the extremities are 35 feet wide and 20 feet high. The breadth between the balustrades is 25 feet. . . . Perhaps in the construction of the bridge, utility was sacrificed to ornament; for, owing to the great height of the centre arch, the road over it has an ascent and descent rather steep and inconvenient. It has been observed that the intention of the architect in giving this capacity to the centre was to afford a freer vent to the frequent floods of the Severn. The total cost amounted to upwards of 16,000*l.*"—"Beauties of England, &c.: Shropshire." 8vo., 1813. p. 83.

It was completed in 1774, at a total cost of 10,794*l.*, or a total expenditure of 15,710*l.* The design was neatly engraved on a small scale by E. Rooker: a print of it (published by J. Taylor, 56, Holborn), is in the King's Collection in the British Museum, with the date, "May, 1768," in red ink: there is also "A Plan for Making the Upper Road to Tenbury, &c., at St. John's," having Gwynn's name erased. Respecting this bridge, the *Oxford Journal* of January 15, 1774, records: "We hear from Shrewsbury that the whole of the last arch of the magnificent bridge now erecting at that place was entirely turned and keyed in, in less than twelve days;—the diameter of which is 41 feet 9 inches, and the suffiet [*sic*] 25 feet 6 inches. This arch contains 181 tons of stone; not one of which is less than a ton, and some of them upwards of five."

In 1770 he exhibited a drawing of his design for the "Bridge to be built at Worcester over the river Severn." The above-named Collection contains a drawing showing a "Plan and Elevation of the Intended New Bridge, July 24th, 1770," with his name to it; an "Elevation of the Old Bridge;" a "Plan and Elevation of a Wooden Bridge," probably a temporary structure whilst the old one was being demolished; and a "Plan of the River and Streets adjoining the Bridge." There is also a neatly-engraved plan, &c., of the bridge by E. Rooker, from his own drawings, forming a companion plate to that of Shrewsbury, and which appears to have been executed for Nash's "History of Worcestershire," fol., London, 1782, ii. App. cxv. This bridge was commenced 25th July, 1771, and was completed in 1780 or 1781. The expenses of building it, opening and completing the avenues, and forming the quays, are said to have amounted to 29,843*l.*

"Worcester Bridge," says Green, in "History of Worcester," 4to., 1796, ii. 16, "was erected from a design, and under the direction, of the late ingenious Mr. John Gwynn, architect. This elegant structure is of stone, and consists of five semicircular arches, springing 5 feet above the lowest water. The diameter of the centre arch is 41 feet; the span of the others declining in a very small proportion. The extent of the bridge from bank to bank is about 270 feet, and its width between the parapets near 25 feet, of which a flag pavement, of 4 feet on

each side, is provided for foot passengers. The ends of the bridge are returned by a range of balustrades, extending 72 feet, between which and the river are considerable lengths of flag pavement, 12 feet wide, leading through arches designed for towing-paths, to prevent interruption to carriages, &c., passing over the bridge. At the west end two very ornamental toll-houses are erected. To make the approaches to the city correspond with the elegance of this structure, the avenues on either side of the river have been laid open to a very commodious extent: its quays are rendered more spacious, convenient, and easy of access; and a very handsome street, 40 feet wide, which derives its name from its vicinity to the bridge, has been built, thereby connecting the Broad-street and others with this important access to the city."

Green also gives the inscription on the foundation-stone, and adds that,—

"On the western side of the river a bold, spacious line of road, elevated to a height that insures a free passage over the meadows across which it is thrown, even in times of the deepest floods to which the Severn is subject, leads in an easy and graceful curve to the suburb of St. John's, where, to the north, on the road to Ludlow, is a grand terrace of near a mile in length, commanding a most extensive prospect of the city; comprehending, in one view, the river, the bridge, the cathedral, all its churches, St. Peter's only excepted, and nearly all the principal edifices in the town, from the Tything, its northern, to Digley, its southern extremity, forming, on the whole, one of the finest approaches to it that any town in England can boast."

These roads are no doubt represented in the drawing by Gwynn as above described.

In 1771 he exhibited a "Design to make Whitehall a Part of the British Mussum, by the addition of a centre piece opposite the Horse Guards." There now follow works to be executed in another and an important city. Dated January 10th of the same year, is a drawing in the Royal Collection of a "Plan of Bocardo and Parts adjacent." This adjoined or was part of the North Gate at Oxford, and was the civic prison, in which prisoners for debt were confined, and in which it is believed the martyrs Cranmer, Ridley, and Latimer were imprisoned. The plan shows the proposed improvements for widening the streets of the city at that part, and for pulling down some of the houses adjoining St. Magdalen's and St. Michael's Churches. This drawing was probably made in anticipation of his appointment, 14th May, 1771, of Surveyor to the new Board of Commissioners of the Oxford Paving Acts, who had obtained, in 1771, an Act of Parliament for taking down the old Magdalen Bridge, and for making approaches thereto. Also for taking down the old East and North gates of the city. This Board still exists. Many of the following notes have been obtained from the Minute Books through the kindness of a local friend. "7th June, 1771, by a letter read from Mr. Gywnn, it appeared he was engaged at Bridgenorth" (I have not ascertained what works, if any, he might have been executing there: the bridge was not rebuilt till after his death). "On the 21st June, 1771, Gwynn's plan for the temporary bridges was approved, and his salary fixed at 150*l.* per annum, 'to commence at Midsummer next, for three years certain, and for one year more if thought necessary.' He received instructions at various times to set out roads, to make plans for widening streets, to measure paving and other works, to make drains, and otherwise to superintend, by himself or his deputy, the various business of the Corporation. He was to advertise for specimens of stone for the new bridge, and to view the different quarries in the neighbourhood. 17th January, 1772, a model of half the bridge was ordered at an expense not exceeding 60*l.*" The design for the new Magdalen Bridge he exhibited at the Royal Academy in this year, in which it was also commenced "under a contract with the builder, Walker, for 6,979*l.*, but it cost 8,200*l.*: though it appears not to have been finished until 1782, it is not clear that Gwynn was employed thereon after Midsummer 1779."

For some time I was at a total loss for a description of this Magdalen Bridge. No work that I looked into gave more than its length, cost, and a date. At last I remembered having seen an old guide-book at the British Museum: on reference I obtained "The New Oxford Guide," sixth edition corrected and enlarged, without date, but the year may easily be fixed, as it refers to the Act of Parliament passed in 1771, and states that "the narrow and incommodious passage at East Gate has been opened, which affords a prospect of Magdalen College, and renders this equal to the magnificence of the High-street; and the elevation of a sumptuous stone bridge is already adopted, from a design of that most ingenious artist, Mr. John Gwynn."

It also states that,—

"North Gate, usually called Bocardo, the only City gate lately remaining, has also been demolished; and the removal of this nuisance perhaps produces the most striking effect of any of these modern improvements."

Turning to the end of the volume, I came upon another copy of the same work, also called the "sixth edition, corrected and enlarged." This edition, after reciting the same words describing the East Gate improvements, says,—

"This bridge, which crosses the two Branches of the Cherwell, has an uncommon Appearance, and owes much of its beauty to an Island that divides the Streams, both above and below; which has given an opportunity of forming large Recesses in the Centre: these serve to break the vast length of Line, and afford an agreeable Station on each side for viewing the Profile. It consists of eleven Arches, five of which are of small dimensions, and serve chiefly as passages of communication, but will likewise be useful as Waterway in high Floods. The Avenues when completed, will be spacious and elegant; and the Carriageway, being nearly level, forms a grand Terrace of 526 feet in length, and upwards of 28 in breadth; the whole of which will strike the eye at one view. Over the centre arch are to be placed, on one side the Arms of the University, and on the other those of the City of Oxford; together with emblematical Figures representing the Sciences, &c. The Piers are relieved with rusticated Columns, corresponding in character with the front Archstones; and the Keystones alternately with Heads and Shells. The Wall that fills the intermediate space between the two Bridges is pannelled. The Parapet is composed of a noble Ballustrade, richly decorated with Sphinxes, Vases, and Lamps, &c. But a more perfect Idea of this magnificent Structure will be formed from the annexed Plate, engraved by [M. A.] Rooker."

The plate is an engraving the size of the page (small 8vo.) of the "Plan and Elevation of Magdalen Bridge at Oxford, Begun in MDCCLXXII," and shows a bridge of three semicircular arches and two for footways, about 110 feet in length, over *each arm* of the river, connected by a causeway 200 feet in length, on the island, having a small archway in the middle. I fear the work has not been carried out to the full intent of its architect, whose name is given on the plate. This illustration is the only one I have seen giving a good general view of the bridge. A drawing of "the old Magdalen Bridge over the River Cherwell" is in the Royal Collection above named; which also contains his drawing, dated October, 1772, showing "Plan and Elevations for a General Workhouse for the City of Oxford,"—the House of Industry, as it is called,—"a neat stone building of two stories in height, and 237 feet in length. The contract was 4,030*l.*" (Wade's "Walks in Oxford.") He also erected the market at Oxford. The Royal Collection contains the original drawing, dated 2nd October, 1773, of the plan and elevations of the lower part of the market, with the signatures of the commissioners agreeing to it. "The market was to be opened December 21st, 1774. The minute-book of the Market Commissioners proves that 'the design and estimate of Mr. Gwynn for the internal arrangements, as well as the elevation fronting the High-street, having been approved, that gentleman was chosen for the architect, his plan being facilitated by the subsequent assent of the Duke of Marlborough to the request of the committee that he would on his part build the houses forming the elevation in conformity with the architect's suggestion.'" (Papers published in the *Oxford Chronicle*, 1859.)

"A new General Market," states the "New Oxford Guide," before quoted, "upon an extensive scale, is erected between the High-street and Jesus College-lane: Which Market is universally allowed to exceed everything of the Kind in this Kingdom. At the south Entrance, from the High Street, it contains forty commodious Shops for Butchers;—North of these eight others, equally commodious, occupied by Gardeners, &c., between which are two spacious Collonades for Poultry, Eggs, Bacon, Cheese, &c. &c., divided into forty Stalls; and beyond these, extending quite to Jesus College Lane, is a large Area for Country Gardeners, Fruit, and divers other Commodities. There are likewise three Avenues running through in direct Lines, intersected by another in the Middle, affording a free Currency of Air; and in the Front four elegant and commodious Houses have been erected, which give an additional Ornament to one of the finest Streets in Europe. * * * The whole extent of the Ground appropriated to the purpose of erecting this Market, is from North to South 347 feet, and from East to West 112, of which the annexed plate exhibits an accurate Plan and Elevation."

This is a companion plate to the before-mentioned one of the bridge, and also has Gwynn's name to it, and the date, "erected 1774." The colonnade is now removed.

In 1774, whilst still engaged upon the bridge at Shrewsbury, Boswell records that he, with Dr. Johnson, being at that place on "Saturday, Sept. 10th, sent for Gwynn, and he showed us the town." He also gives an amusing account of a trip to Oxford. "On Tuesday, 19th March, 1776, we were taken up by the Oxford coach. He was accompanied by Mr. Gwynn, the architect. * * * Gwynn was a fine lively rattling fellow. Dr. Johnson kept him in subjection, but with a kindly authority. The spirit of the artist, however, rose against what he thought a Gothic attack, and he made a brisk defence. 'What, sir, you will allow no value to beauty in architecture or in statuary? Why should we allow it, then, in writing? Why do you take the trouble to give us so many fine allusions, and bright images, and elegant phrases? You might convey all your instruction without these ornaments.' Johnson smiled with complacency; but said,—'Why, sir, all these ornaments are useful, because they obtain an easier reception for truth; but a building is not at all more convenient for being decorated with superfluous carved work.' ..... Gwynn at last was lucky enough to make one reply to Dr. Johnson, which he allowed to be excellent. Johnson censured him for taking down a church which might have stood many years, and building a new one at a different place, for no other reason but that there might be a direct road to a new bridge; and his expression was, 'You are taking a church out of the way that the people may go in a straight line to the bridge.' 'No, sir,' said Gwynn; 'I am putting the church *in* the way that the people may not *go out of the way*.' Johnson (with a hearty loud laugh of approbation): 'Speak no more. Rest your colloquial fame upon this.'" (Croker's edition, p. 481.) A few days afterwards, at a dinner "given at University College on St. Cuthbert's Day, there were present Dr. Wetherell, Johnson, Boswell, Coulson, Scott, Gwynn, Dr. Chandler, the traveller, and [Dr.] Fisher, himself then a young Fellow of the college." (Croker's edition, p. 483.)

I have neither been able to recover the name of the church referred to in the above conversation with Dr. Johnson (is it at Bridgenorth?), nor those of the "several mansions" attributed to him in the short account by W. Sandby; nor those of the "several public buildings in and about London," mentioned by Mulvany. The only other erection to which his name has as yet been attached is the bridge at Atcham, near Shrewsbury, over the river Tern; or "the New Tern Bridge," as it has been called. It consists of a single arch of 100 feet span, by far the largest of any that Gwynn had erected: I am unfortunately unable to give any further description of this work. "In December, 1783," says Owen, "he was presented with the freedom of this city (Worcester), in testimony of his merit in planning and finishing Worcester bridge, and for his indefatigable exertions in completing the works. He was also the projector of the several avenues leading thereto; which together, will remain a lasting monument of his skill and ingenuity. They who remember the state of this city near the river, on both sides, and compare it with its present form, must necessarily bear testimony to his great merit. Had he lived, he would have seen what he had much at heart, the completion of the new road from Henwick to St. John's, which is one of the most beautiful approaches in the kingdom."

His Will is to be seen in the principal registry of her Majesty's Court of Probate. It is dated 25th February, 1786, and describes him as "late of the parish of St. Clement, in or near the city of Worcester, architect," and "formerly of St. Martin's-in-the-Fields, in the city of Westminster." A portion of this will is so remarkable, that no memoir of John Gwynn could be concluded without the following paragraphs, given for the first time; besides noting the value of the other information it affords:—

"Also I give and bequeath to my said brother Richard Gwynn (of Liverpool), and his assigns, one clear annuity of eight pounds to be paid him by my said trustees '* * * * (out of the personal estate), and "out of the residue of the interest of my personalty, pay and apply any sum not exceeding the sum of thirty pounds (per annum) for the maintenance and education of my said natural son Charles" (Gwynn, otherwise Sansenil, son of Ann Sansenil), "till he shall be of a proper age to be put out apprentice, and then do and shall out of the accumulated rents and interest of my property, put and place him out apprentice to a painter, sculptor, architect, or either a seal or copper-plate engraver, if he should like any one of those professions, or to any other he is most fit for and likes. And I wish him to learn Drawing of a good master (if he has a genius for it) prior to his being put to any one of the before-mentioned professions, and to be instructed in Geometry and Mathematics. And I desire my said trustees to supply him with reasonable pocket-money and other necessaries till he is of the age of twenty-one years, when I give him the residue of my personal estate, and all the interest which shall then have arisen. And I give him the property of my book entitled 'London and Westminster Improved,' and the plates thereto belonging. And I do desire him to publish the most useful of my drawings. But if my said son Charles should die in his minority without leaving issue, then I give a moiety of my personal estate that shall be then remaining to the President of the Royal Society, London, for the time being, in trust that he do and shall put the same out upon Government security, and pay annually the dividends due thereon to such persons as in the opinion of the said President and a majority of that society shall deliver the best discourse on the following subjects, viz., 'Which promotes the happiness of mankind most, and the universal good and benefit of society—the establishment of societies of learning, literature, and the dead languages,—or the establishment of societies of ingenious, honest industry. And whether the law on the present plan does not bring into this kingdom more poverty and distress than it does good.' The said President to advertise for candidates and to pay the premium to whom it shall be adjudged. The other moiety I give in like manner to the President of the

Royal Academy, London, for the time being, to put the same out upon like security, and divide the dividends into two premiums, one-half part or premium to be given annually by the said President and majority of that society to the best die engraver, or for a bust, statue, or composition. The other half-part or premium for the discovery of anything that will be useful to mankind in arts, mechanicks, manufactures, or husbandry. But if my said son Charles should leave issue in his minority, I give the whole of my personal estate equally (if more than one) to such issue." * * * * *

In proving the Will he was described as being very ill when it was made; and that he died on or about the 27th February, 1786, only two days after the execution of it.

As in this Will he desired to be buried in the "graveyard of St. Oswald's Hospital in Worcester," with a tablet stating his birth, death, and age, it was hoped that this and certain other information would be readily obtained. Until this Will was inspected by me, his burial-place was always stated in a different locality. Thus Owen says, "He died February 31st, 1786, and was buried in the church of Henley-upon-Thames, where an elegant monument is erected to his memory." I will show, subsequently, to whom this monument was raised, but here merely draw attention to the date of "31st February," as an error altogether. A professional gentleman at Worcester, to whom I applied in the matter, very kindly troubled himself to hunt among the memorials in St. Oswald's Hospital: "After spending a long time," he writes, "in examining the tombstones, I was at last fortunate enough to find Gwynn's and his son's: they are built in a brick wall dividing the two burial grounds. They are close together, both of them half-worn away, and portions of the inscriptions illegible. Over that to John Gwynn is carved in basso-relievo a broken column, a scroll, and a T square. The column is placed upon a pedestal, on the die of which appears to have been a small bust of Gwynn not more than two or three inches. The stones appeared to me to have been worked by ordinary masons. The following are the inscriptions, so far as I could make them out:—

'Here lies interred the body of John Gwynn, Esq., Architect; Member of the Royal Academy; Author of London and Westminster Improved; Born at Shrewsbury, on the . . . Died February . . . 1786.'

The inscription to the son runs thus:—'Here lies interred the body of Charles Gwynn, son of John Gwynn, who died 10 . . . 1796, aged . . . . years.'

"There appears to be something added, but it is quite illegible: the 10th, I must add, is doubtful." Feeling that this result was very unsatisfactory, and that the *actual information wanted* had the appearance of being advisedly erased, I again troubled my friend, and he replied, "If you found the very scanty information in my last letter tantalizing, I fear you will consider the present still more so. I to-day called for the fourth time upon the Rev. — Jones, the chaplain at St. Oswald's, to obtain a sight of the register; making sure that I had nothing else to do than to turn to the years 1786 and 1796 to find all the information you required. I found the last general entry to be in 1783; and under 1789 is the following note:—'The Act of Parliament took place for paying threepence duty to the King for each burial, so that from this time our poor Brethren only of the Hospital, who are exempt from the tax, will be registered.'"

So in consequence of these two circumstances we are left in ignorance of Gwynn's age and day of death, unless the 27th February be considered correct. Being thus left in doubt also as to the result of the proviso in Gwynn's Will, I further requested my friend to search the Probate Court, at Worcester; but "neither the names of Gwynn nor of Sansenil are to be found in the books." Another friend has searched the books at the Court at Hereford, and equally without success. Lichfield is the last official resource where it can be ascertained if the son died after having attained his majority, and how the property was disposed of by him; but the following facts may be considered a sufficient conclusion of the point. I applied to the Royal Academy to ascertain if that Society ever came into the possession of a moiety of the personalty. The result is unsatisfactory, in so much that apparently the only information to be obtained is, that Gwynn's death was reported in 1786: the contents of the Will were "reported to the Council, 20th June, 1798," when the solicitor was directed to inquire into the affair. Thinking that the records of the Royal Society might throw a little more light on the subject, I applied for such particulars as could be found. The following have been kindly forwarded to me:—"June 28th, 1798. The Society's solicitor reported the filing of a Bill in Chancery against the Royal Society on the question following:" (then follows the clause of the Will relating to the bequest.) "The council were unanimously of opinion that the objects of the said bequest were totally foreign to the purposes for which the Society was instituted, and therefore should be refused if the court shall approve their so doing. As no further mention of the question appears, it may be concluded that the court was satisfied. The Bill was filed by Mary Gwynn." Who was Mary Gwynn? The widow of Charles Gwynn it may be presumed. He thus appears to have died under age; and, leaving no issue, the property would be divided for the bequests. Both societies appear to have refused to accept; consequently the wife would obtain the property, and to her advantage, otherwise she would have been left without a provision. The Will is a peculiar one.

Among the few other criticisms which have appeared on Gwynn's works, and which have not been noticed herein, the two following may be quoted: the first is from Dallaway's "Anecdotes of the Arts," &c., 8vo., 1800, pp. 121-2;—"The approach to the city of Oxford over Magdalen Bridge, built by Gwynn, is unique in point of effect and the first impression it communicates of the grandeur of the seat of the Muses. Whether it be a bridge or a causeway, the double columns are, at least, useless, for they add nothing to its support. I am aware of Mylne having adopted them at Blackfriars; and I think not happily; for the original purpose of the pillars is not ornament, but support. The architect of the Magdalen Bridge, it will be allowed, had a most impracticable ground to work upon; and his bridge at Worcester is a proof of his skill, where he had a single river only to cross. England is famous for that species of architecture." Owen, however, is more general:—"His Worcester Bridge was his best production: that of Shrewsbury is a beautiful elevation, but very faulty in point of convenience; as is the neighbouring bridge at Atcham. The bridge at Oxford has little to recommend it; but his new market in that city, which was one of the finest modern markets erected in this kingdom, did him credit." "Worcester Bridge," writes a local friend, "was a work showing a great amount of architectural merit; but its effect is now quite spoiled, owing to the ugly overhanging cast-iron work introduced for the purpose of widening the roadway, in 1841." May we hope that the good people of that city will spend a few shillings in having the inscriptions on the gravestones recut where legible? and a note on them of the fact. Has any local antiquary copied them? By this means, perhaps, the missing words could be obtained.

As to his general character and appearance, Owen remarks that Gwynn "was lively, quick and sarcastic; of quaint appearance, and odd manners. . . . Dr. Johnson was fond of his lively humour, and odd, and sometimes keen, sallies. . . . He was, I believe, poor, but high-spirited, and of unimpeachable integrity." Mr. Pidgeon, of Shrewsbury, the Borough Treasurer, an able antiquary, has, I am informed, in his possession, an admirable portrait of Gwynn, painted by Zaffanii, or Zoffany, as the name is usually written: this picture ought to be in the collection either of the Royal Academy or of the Institute of Architects, and for such a purpose Mr. Pidgeon would probably be disposed to part with it. The portrait was presented to him by the late Rev. W. G. Rowland, of Shrewsbury, who died in 1851, in his 82nd year. His exertions in favour of, and his connexion with, the establishment of schools of art and places for art education, is worth more than a passing notice: his own remarks on the subject, besides the early publications, are contained in "London, &c., Improved," and must have tended greatly to the formation of the Royal Academy of Arts. His studies on the subject of bridge-building, at a time when this country had had to accept the services of Labelye at Westminster Bridge, in 1738, although Mylne and others vindicated our reputation in 1759, is also another point for enlarged comment in such a biography. Mr. Sydney Smirke, in "Suggestions," &c., 8vo., 1834, p. 23, writes favourably of Gwynn's favourite project, "the formation of a permanent board or commission for superintending and controlling the architectural embellishments of London;" a suggestion uppermost in the minds of many even during this year.

He appears to have spelt his name "Gwyn" early in life: thus, in the work published in 1749, the dedication is signed "J. Gwyn," while the vignettes have "J. Gwynn" to them; and the dedication in the volume of 1766 is signed "Gwynn." The plans in the royal collection have his autograph "J. Gwynn," and I have kept to this spelling throughout this paper. His name is also met with as "Gwynne" in some publications.

If any of your readers possess the early printed works referred to herein as not having been seen, I should be greatly obliged by permission to peruse them: they might contain some passage assisting this purpose. I have ascertained that the library at Shrewsbury does not possess any of them. Inquiries might also be made as to what became of his drawings (named in the Will) after the death of his son. Where are the copperplates of the "London and Westminster," &c.? also named in the Will.

In conclusion, I must express my deep obligations to Mr. Nicholson, F.I.B.A., of Hereford; Mr. William Jeffrey Hopkins, F.I.B.A., of Worcester; Mr. Edward G. Bruton, F.I.B.A., of Oxford; and those to whom they applied, for their kindness in furnishing many particulars, without which this memoir could not have been so fully developed.

As in the early portion I have referred to the mis-statement of the burial-place of Gwynn, and stated that I would explain to whom the monument was erected, I here add a copy of some lines in ink, at the back of one of the drawings in the Royal Collection: they speak for themselves:—

"These plans for paving the City of Oxford, and building of Magdalen Bridge, &c., were executed by William Hayward, of Shrewsbury, under Mr. Gwynn, Architect. An amiable young man, who afterwards contracted for the building of Henley Bridge, Com. Ox.; but, before he began his labour, God called him to everlasting rest.

Over the south door of the south aisle of Henley Church is a Marble Urn and Tablet, with this inscription:—

'1782.
Near this place was buried the remains
Of William Hayward, of Shrewsbury,
Architect,
In the 42nd year of his age.
Who had contracted for building the bridge
Over the River Thames in this Town,
But died here before he had begun upon the work,
Which has since been erected after the design
Of that truly ingenious man.'"

WYATT PAPWORTH.

ON THE CHANGE OF FORM ASSUMED BY WROUGHT IRON AND OTHER METALS WHEN HEATED AND THEN COOLED BY PARTIAL IMMERSION IN WATER.

A PAPER, descriptive of experiments on this subject, read at a meeting of the Royal Society, by Lieut.-col. H. Clerk, R.A., shows results which may be usefully brought before our readers. It appears that a short time ago, when about to shoe a wheel with a hoop-tire, to which it was necessary to give a bevel of about 3-8ths of an inch, one of the workmen employed suggested that the bevel could be given by heating the tire red-hot and then immersing it one-half its depth in cold water. This was tried, and found to answer perfectly, that portion of the tire which was out of the water being reduced in diameter. The tire was 3 inches wide, ½ inch thick, and 4 feet 2 inches in diameter.

As this result was curious and not generally known, I considered it desirable, says the writer, to institute some further experiments in order to try how far, by successive heatings and coolings, this change of form could be augmented, and also whether the same effect could be produced on other metals than wrought iron.

The experiments were made on cylinders of wrought-iron of different dimensions, both hollow and solid; immersed, some to one-half of their depth, others to two-thirds; also on similar cylinders of cast-iron, steel, zinc, tin, and gun-metal.

The specimens experimented on were all accurately turned in a lathe to the required dimensions, which were carefully noted: they were then heated to a red heat in a wood-furnace used for heating the tires of wheels. As soon as they had acquired the proper heat, they were taken out and immersed in water to one-half or two-thirds of their depth (as stated in the experiment). The temperature of the water ranged from 60° to 70° Fahr.

The specimens were allowed to remain in the water about two minutes, in which time the portion in the air had lost all redness, and that in the water had become sufficiently cool to handle. These alternate heatings and coolings were repeated till the metal showed signs of cracking or giving way.

It will be seen by an inspection of the figures that the general effect is a maximum contraction of the metal about 1 inch above the water-line; and that this is the same whether the metal be immersed one-half or two-thirds of its depth, or whether it be 9, 6, or 3 inches deep. With wrought-iron the heatings and coolings could be repeated from fifteen to twenty times before the metal showed any signs of separation; but with cast-iron after the fifth heating the metal was cracked, and the hollow cylinder separated all round just below the water-line after the second heating. Cast-steel stood twenty heatings, but was very much cracked all over its surface. As respects the change of form of cast iron and steel, the result was similar to that in wrought-iron, but not nearly so large in amount. The cast-iron did not return to its original dimensions, but the smallest diameter was about 1 inch above the water-line.

Tin showed no change of form, there being apparently no intermediate state between the melting-point and absolute solidity. Brass, gun-metal, and zinc showed the effect slightly; but instead of a contraction just above the water-line, there was an expansion or bulging.

Mr. Stokes, the secretary of the Royal Society, says,—The cause of the curious phenomenon described by Colonel Clerk in the preceding paper seems to be indicated by some of the figures, especially those relating to hollow cylinders of wrought-iron, which are very instructive.

Imagine such a cylinder divided into two parts by a horizontal plane at the water-line, and in this state immersed after heating. The under part, being in contact with water, would rapidly cool and contract, while the upper part would cool but slowly. Consequently by the time the under part had pretty well cooled, the upper part would be left jutting out; but when both parts had cooled, their diameters would again agree. Now, in the actual experiment this independent motion of the two parts is impossible, on account of the continuity of the metal: the under part tends to pull in the upper, and the upper to pull out the under. In this contest the cooler metal, being the stronger, prevails, and so the upper part gets pulled in, a little above the water-line, while still hot. But it has still to contract on cooling; and this it will do to the full extent due to its temperature, except in so far as it may be prevented by its connexion with the rest. Hence, on the whole, the effect of this cause is to leave a permanent contraction a little above the water-line; and it is easy to see that the contraction must be so much nearer to the water-line as the thickness of the metal is less; the other dimensions of the hollow cylinder and the nature of the metal being given. When the hollow cylinder is very short, so as to be reduced to a mere hoop, the same cause operates; but there is not room for more than a general inclination of the surface, leaving the hoop bevelled.

PARIS.

THE "Pavillon de Flore," at the south end of the Palace of the Tuileries, which had become insecure in the foundations, was taken down two years ago. It is now rebuilding, and the walls are completed to above the mezzanine story. When finished it is to be called the Pavillon de Napoleon III. The façade of the Station "du Nord" is constructed as far as the stonework is required, and the cornice has received its embellishment of statuary. The new Grand Opera, near the Boulevard des Capucines, is progressing rapidly: the walls are at present about 8 feet high. A very elaborate model of the edifice, with all its architectural decorations, is in the Exhibition of Modern Art, now open in the Palace of Industry in the Champs Elysées.

The Palace of Auteuil, as it is named, of which illustrations have been in the *Builder*, will exceed in superficial space the International Exhibition Building at South Kensington. It is making very slow advances: the foundations are formed: the stonework of the walls, with very small exception, is not more than 12 feet above the surface. It will be a stone building entirely, with glass roofing. Very few workmen are employed on it—certainly under a hundred,—and there is no possibility of its being opened this year, although it is so advertised constantly. The situation is *triste*. The front comes very near to a road planted with trees on each side; and on the opposite side of the road, close to it, rises the heavy earthwork forming the fortifications of the city: the other sides are shut in by thick plantations, so that the building appears to lie in a hollow, from whence there is no prospect beyond 100 yards. At present there is a railroad from the Station de l'Ouest, which goes no farther than Auteuil, nearly all the way constructed in a cutting, and which is totally incompetent for any great conveyance of passengers.

The Exhibition of Modern Art, now open in the Palace of the Champs Elysées, and to which we have already referred, consists of 2,923 subjects; pictures, sculptures, and other branches of fine art; among which are forty-two drawings of architecture, and thirty-six engravings of architectural subjects. There is scarcely anything of striking note, architecturally. M. Bournichon exhibits three drawings of the episcopal residence erected at Algiers for the bishop: M. Delarocque has a project of restoration of the ancient church on Montmartre; A. Etex, sculptor, a design for a swimming school in the Bois de Boulogne, near Passy; L. Juste, five drawings of a newly-erected communal school, founded by the Chamber of Commerce, in the Avenue Trudaine, a very plain affair. There is a good drawing of the new church of St. Bernard, erected last year in Paris by A. J. Magne, Gothic in style. M. Duthoit has two large elaborate coloured drawings of the interior of the mosque of St. Omar, at Jerusalem, called the Church of the Rock by Christians, and believed by Mr. Fergusson to have been the burial-place of our Saviour. These, and ten drawings of the Temple of Augustus at Angora, in Asia Minor, are the principal subjects in the Exhibition.

WHERE IS ST. THOMAS'S HOSPITAL TO STAND?

AT a meeting of the Governors of St. Thomas's Hospital, held on the 23rd, it was resolved, on the motion of Mr. Tite, after some opposition,—

"That the joint meeting of a deputation from the Hospitals of St. Thomas and Bethlehem, formerly proposed by this hospital, and sanctioned by their General Court, having been accepted by the governors of Bethlehem Hospital, this Court requests the president and treasurer, with five other members of the Grand Committee, to meet a similar deputation from Bethlehem as soon as possible, with a view to ascertain whether it is probable that an arrangement can be made for obtaining that site on terms mutually advantageous; and in the event of the Grand Committee not being satisfied that such an arrangement can be made within a reasonable period of time, that they be authorized and requested to continue their negotiations with the Metropolitan Board of Works for the purchase of the site on the proposed south embankment of the river, and to report all the proceedings to this Court."

The medical staff of St. Thomas's have pronounced strongly in favour of the Stangate site on the proposed embankment of the Thames. The area is said to be nine acres, and the price talked of about 100,000*l*. All the arguments that have been used to prove that the governors of Bedlam ought to remove, go in aid of our original urging that the new St. Thomas's Hospital should be erected out of the heart of the Borough, and where pure air and sufficient area could be obtained. The medical officers like both the sites named, Stangate and Bedlam, because they are actually a mile or so from Guy's. It is perfectly preposterous to assert that Southwark proper requires two enormous hospitals to supply its wants. Why, then, not endeavour to give the metropolis *one* hospital where every patient may at all times have a *chance* of recovering? We wonder if there be a competent medical man of credit brave enough to assert that this is the case now. We sincerely hope, with the greatest regard for Mr. Tite, that he may fail in both the negotiations authorized by his resolution. If we do not err, he is himself fully persuaded of the desirability of getting St. Thomas's into a health-giving atmosphere. The greatest mistake a public man can make is in being false to his own convictions. If Mr. Tite would do what he *thinks* right, and let foolish people go to the devil their own way, he would find the result more satisfactory in the long run, and achieve what he ambitions,—solid fame.

THE NATIONAL SCHOOLS OF THE METROPOLIS.

FOR some time past we have watched with interest the working of several of these establishments; and, while acknowledging the vast amount of benefit which they confer, we are forced to confess that there are some points in their management to which it is very necessary to direct earnest attention. It may be that the faults to which we refer are not due to the system so much as to the difficulty of procuring that amount of regular attendance on the part of the children which is necessary to carry out properly the plan of education.

We will for the present more especially confine our remark to the schools for boys. In many of these there will be found intelligent lads of the ages from eleven to thirteen, who have made very satisfactory progress. These it will be seen, however, in nine cases out of ten, have been in very regular attendance; and have also been in training from an early age. It is unfortunately the case that a large number of boys, particularly those who are over eight years of age, cannot be well depended upon for regular attendance; and many thousands of boys leave school for some kind of employment before they have reached their eleventh year. It is, therefore, of the greatest consequence that every exertion should be used to make the most of the very limited time which is at the disposal of so many scholars. The main aim of these schools should be to give to children the power of reading and writing correctly, and a mastery of the simple rules of arithmetic. As matters are at present managed, there seems to be much discursive instruction which does not lead to very practical good results. In the infant schools especially we find that it is generally a very long time before the children can read clearly or spell simple words. Here, as in other classes, there is a great deal of superficial knowledge gained: the boys get a sort of glimmering idea of geography, natural and other history, chemistry, &c., &c. This is, however, for the most part a parrot-like learning by rote; and when the boys leave the school the chief part of it is forgotten.

No one could offer any objection to the system of giving general instruction, provided it did not interfere with what is to these boys the more necessary and solid groundwork of education: we mean the ability to read and write with facility; for this, when once thoroughly obtained, can never be lost; and with this power, in these days of cheap books, and libraries easy of access, all the means of knowledge are at the disposal of those who choose to search for it.

Every energy should be directed to the point to which we have just referred; and it is of consequence that great attention should be paid to the children in the younger classes. Unfortunately, this is frequently neglected, or the master takes most interest in the higher classes; and the others are left too much in the care of boy-teachers, some of whom are not well qualified for their important duty.

We have taken some trouble to examine at their homes a number of the children of the working classes who attend these schools, as to their degree of proficiency; and the result is for the most part very unsatisfactory.

Having questioned the scholars in several of the schools, we went to a day-school kept by an elderly lady who taught in the old fashion; and there could be no doubt of her greater success in teaching reading and writing: some children who had been there only four months, and who, when they went to the school, did not know their letters, could read the Testament well, and spell most words. The evident cause of this is that the children are made to direct their entire attention to this first and most necessary means of education. Seeing this result, it is worth while to inquire if it might not be an advantage to go back, to a certain extent, to the old plan, in the younger classes of the national schools.

A TOUR IN THE TOWER.

THE Lions at the Tower are numerous;—though the live lions are no longer to be found there. Six or seven centuries before the establishment of zoological gardens had been thought of in England, the keeping of ferocious animals, brought from distant countries, was a custom with our monarchs and nobility. Henry I. had a collection of lions, leopards, and other strange beasts, at his manor of Woodstock; and in subsequent times we find mention of them as kept in the Tower of London. In 1252, King Henry III. sent to the Tower a white bear, which had been brought to him as a present from Norway, and the sheriffs of London were commanded to pay fourpence every day for his maintenance: in the following year an order was given to them to provide a muzzle for the said bear, and an iron chain to hold him in the water and likewise a long and stout cord to hold him when *fishing in the river Thames*.

Two years after this an elephant was presented to the king by Louis, king of France. He was landed at Sandwich to the astonishment of the people, who crowded to see him from all parts of

the country. The expense of the elephant also seems to have fallen upon the corporation; for on being brought to London, the king gave directions to the sheriffs of the City, to cause a house to be built for him in the Tower, 40 feet long by 20 feet wide. In the succeeding reigns mention is made of the king's lions, leopards, bears, and other wild beasts, kept in the Tower. This likewise seems to have entailed cost upon the City; for we find that, in the time of Edward II., the sheriffs of London were directed to provide a quarter of mutton every day for the king's lion there; and about the same time frequent orders were given to pay sixpence per diem for the maintenance of the king's lion, and the like for his leopard, and three-halfpence daily for the wages of their keepers, when several esquires who were confined there as prisoners were allowed but a penny a day for their support.

King James I. sometimes amused himself and the court with combats between the animals, and by baiting them with dogs. On June the 3rd, 1604, the king took with him the Duke of Lennox, with divers earls and lords, and caused a lion and lioness to be put forth, and a live cock to be thrown to them, "which," says the account, "being their natural enemy, they immediately killed. A lamb was next put in, yet this they did not offer to hunt; but next, when the king ordered a fresh lion to be brought out, and two mastiffs to be let in upon him, a furious battle ensued."

We do not hear in the old times of the ill health and premature death of the animals; but Mr. Bayley, in his "History of the Tower," published in 1821, remarks,—"The menagerie was formerly very fine and extensive; but now, perhaps from bad management or the inexperience of their keepers, many of the beasts have died, and the collection has greatly diminished." In 1834 the menagerie was removed altogether.

The existing lions were visited by members of the Ecclesiological Society and their friends, as our readers knew would be the case, on Friday in last week. The muster was a strong one; and much pleasure was manifested at various points in the route, especially in the Norman Chapel in the White Tower. This chapel has been restored carefully. For years it was filled with records, and allowed to remain in a discreditable condition. We engraved a view of it some time ago, and again and again protested against the neglect of it. It is with great gratification, therefore, we see the change. Our readers may remember it has a semicircular apse, and a large triforium, without a clerestory. It is vaulted with stone. Built towards the end of the eleventh century, under the direction of Gundulph, it is pointed to show that Norman architecture was not then in a very advanced state, the joints being somewhat large, and the openings without mouldings. The cushion capitals show the *tau* as an ornament in the centre: one capital on each side at the square end of the church has a little extra ornamentation. A new pavement has been laid, of cream-coloured tile with an incised ornament. Mr. Beresford Hope, who led the party; Lord de Ros, Lieutenant of the Tower; Mr. J. H. Parker, and Mr. Charles Baily pointed out and discussed the peculiarities of the structure; and, on the motion of Mr. Godwin, thanks were voted to the authorities for what had been done to restore and preserve it. Afterwards thanks were given to Mr. Salvin for the manner in which the restoration had been carried out. As we are not about to follow precisely the footsteps of the party, we may here note that besides those already named we noticed in the bevy of visitors Mr. Ferrey, Mr. Gordon Hills, Mr. Slater, Mr. Salvin, Mr. T. Roger Smith, Mr. Edward Hall, Mr. Truefitt, the Rev. Benjamin Webb, Mr. D. Brandon, Mr. J. G. Crace, Mr. Burges, Mr. Garling, Mr. Hakewill, Mr. Hayward, Mr. Knightley, and many others equally well known to our readers.

The new armories which have been formed in the White Tower are arranged with great taste. About 60,000 rifles are in standings: the sword-bayonets form railing round well-holes, and, with sabres and ramrods, are combined with very great variety in the decoration of the roof. One of the most ingenious efforts is shown in the facia of an opening in the ceiling, wherein the gun-locks and bent ramrods are so used as to produce all the effect of a piece of hammered iron scroll-work.

During the last twenty years great changes have been made throughout the fortress, which, although they have not generally improved the picturesque appearance of the place, have in some instances added to the stability of several buildings, and are of advantage in a sanitary point of view. Within the time mentioned the long range of barrack-rooms of indifferent aspect, and still imperfectly supplied with light and ventilation, has taken the place of the Armory of Queen Elizabeth's reign, which was destroyed by fire. The Beauchamp Tower, both inside and outside, has been restored: the marks made by the prisoners have been skilfully cleared of whitewash which had been allowed to disguise them. Some illustrations of these will be found in a previous volume. Few parts of the Tower have so much to interest as the chambers in this building. The walls speak. These are now open to visitors,—a matter for satisfaction; for not long since it was used as a mess-room by some of the officers of the garrison: the apartments were disfigured by unsightly modern furniture, and not much care was taken of the stone records cut by early occupants.

Leaving the Beauchamp Tower, and standing with our back towards the Norman keep, allowing as little as possible of the barracks to come into the view, the scene has much to interest, although a commonplace brick house near the church, and the pavement substituted for the turf from which the Tower green took its name, are rather out of harmony. On the right side of the picture is the little church of St. Peter-in-Bonds, in which lie many headless bodies. There is the site of the scaffold, marked by dark-coloured stones: and the decayed trees which still remain remind of the fine avenue which formerly flourished here. Old records state that in years gone by this was the scene of tournaments and other gay assemblages. Many pictures come to mind when standing on this spot;—Lord Hastings suddenly seized, brought by order of Richard of Gloucester, and with little preparation, beheaded on a block of timber which chanced to be here for the purpose of making some repairs; or the sad morning when Lady Jane Grey and her unhappy husband were put to death. Opposite is a long range of buildings, called the Lieutenant's lodgings, which belong to the time of Henry VII. and Henry VIII. A part of this gabled structure, although modernized with windows that do not correspond with the carved weather boards and highly pitched roofs, still has a quaint aspect, as our slight sketch shows (fig. 1). The Princess Elizabeth was for some time kept a prisoner here by Queen Mary. There are many other associations connected with these lodgings, but we must not linger upon them further than to note that it was here Guy Fawkes and the gunpowder plot conspirators were examined. A tablet and some other memorials of this event were placed in one of the rooms in James I.'s time, but have been removed or covered by new decorations.

In the winter season the black, broken trunks and branches of the trees here do not hold out much promise; but in the spring time they bud cheerfully; and here and there, in openings in the pavement, young trees have been planted which may supply the place of the decaying ones. Within St. Peter's, in front of the altar, Queen Anne Boleyn, and many other historical personages, lie buried. Outside, a brass plate has been recently fixed in granite to mark the spot where Anne was beheaded in 1536. Near the altar, on the north side, there is a characteristic monument to Sir Richard Blount and Sir Michael Blount, his son, who were both lieutenants of the Tower. Sir Richard died in 1564, and Sir Michael in 1592. On the opposite side of the chancel there is a curious monument of the time of Charles I.; and at the west end, on the floor, is an altar-tomb, with two effigies, black and ill-cared for, to preserve the memory of Sir Richard Cholmondeley, lieutenant of the Tower, and his wife. There are some other monuments, which we must pass over, with the exception of a little stone on the floor, which records that Edwards, the keeper of his Majesty's regalia, who was so roughly treated by Blood and his associates when they made the attempt to steal the crown, is buried there. In the vestry are some coffin-plates which were found in the place where the Scotch rebel lords, Balmerino, Kilmarnock, and Lovat, were interred. St. Peter's was erected in the reign of Edward I., on the site of an earlier building; but the windows and other prominent features are much later in character, *possibly* belonging to the reign of Henry VIII., when the church was injured by fire; and these were, moreover, restored within a comparatively recent period. These windows, by the way, led a distinguished antiquary, on the occasion of the visit to which we have referred, aided by a kindly desire he entertains to make every building seem as *young* as may be, to give hastily the date of Henry VIII. as that of the building. The condition of this church (part of the history of England) is abominable. Although, as Macaulay writes, death is there associated "with whatever is darkest in human nature and in human destiny, with the savage triumph of implacable enemies, with the inconstancy, the ingratitude, the cowardice of friends, with all the miseries of fallen greatness and of blighted fame;" it demands at our hands the most careful preservation.

Wandering eastward from the church, specimens of ordnance captured in various wars or made from guns taken in distant lands, are found worthy of examination; but there is nothing architectural to be seen which is satisfactory to the eye. At the Jewel Office, the exterior appearance is most distasteful; all the ancient aspect has been destroyed. The contents have, however, a rare interest. In very early times, the jewels and other insignia of royalty were placed for safety in the religious houses, but most generally in the treasury of the Temple; and it was not, perhaps, before the reign of King Henry III. that they were deposited in the Tower of London.

When the king went abroad his crown usually accompanied him; and on the return of Henry III. from France in 1230, he commanded the Bishop of Carlisle to replace the jewels in the Tower as they had been before; which is the first mention, probably, of their being kept there.

In the year 1230, the jewels were taken to Reading by the Master and Almoner of the New Temple, and delivered to King John, preparatory to his celebrating the feast of Christmas in that town. In the ninth year of the reign of this monarch he received a large crown and other precious articles from Germany, and which seem to have been of the most splendid description. Edward III.'s expensive wars obliged him to pawn his crown and jewels to the merchants of Flanders; and soon after the accession of his grandson, Richard II., they were placed in the hands of the Bishop of London and the Earl of Arundel, as security for the sum of 10,000*l.*, which that monarch had borrowed of John Philpot and other merchants of London. Even Henry V., of famous memory, to enable him to carry on his wars, pledged his great collar to the Mayor and Commonality of London, as security for the sum of 10,000 marks; and in the following year, having obtained large sums from the nobility and others, empowered Thomas Chitterne, keeper of his jewels, to deliver them to those persons, as pledges for the repayment of their respective loans. Henry VI., too, on several occasions, was reduced to the necessity of pawning his jewels in order to raise money.

Visitors now, however, will find them all safe at home, with many additions, and should not fail to examine them. They will go also of course to the ancient armory, a splendid collection, and which should be more so, as we have often said. We do not yet find that presiding knowledge there that would lead to the removal of blots and the perfecting of the collection. It ought to become a most complete school of its kind. The public go there to look along the line of mounted effigies of English kings, correctly and incorrectly named; to compare the war and tilting armour of various periods; to note the exquisite workmanship of some; to contrast the huge iron coat of Henry VIII. with that worn by him when a boy; these again with the leather coats and helmets of Cromwell's days; and trace the decline of the use of breastplates and other metal personal defences as firearms became more deadly in their effect. Inducement, however, for something more than this should be held out.

Going to the south-east of the White Tower, the Salt Tower has been rebuilt in its old shape, and other works are in progress. West of the Salt Tower, towards the Bloody Tower, are now a range of warehouses and some plain buildings, about seventy or eighty years old. On this site formerly stood that portion of the fortress which was for several centuries occupied as a royal palace. From this to the White Tower there was a means of communication with the chapel and the apartments which were used on state occasions and the meetings of the council. It is to be regretted that no view of this ancient home of English royalty seems to have been preserved.

Great changes have taken place at Traitors' Gate. The water from the Thames has been shut off. Boats do not now go,—

> "On through that gate misnamed, through which before
> Went Sidney, Russell, Raleigh, Cranmer, More."

A very rough sketch of it made some time ago must serve to suggest its aspect (fig. 4). No visitor should pass without examining this spot. Here a steam-engine, used for driving the machinery and employed for hoisting and packing the various materials of war, now works with its puffing noise. The contrast of this with the old world ideas is striking. The black archway of the Bloody Tower; the portcullis, which with its complete apparatus for working it we have before

SCRAPS FROM THE TOWER OF LONDON.

FIG. 3.—ENTRANCE NEAR THE WARDER'S LODGE; LOOKING WESTWARDS TOWARDS THE MOAT.

FIG. 4.—TRAITORS' GATE.

engraved (the only perfect one remaining in England); the massive door, and other features are but little changed since the time when, it is said, the youthful King Edward V., and his brother the Duke of York, were murdered here. The traditions of the Tower state that the bones of the young princes were found in a chamber in the basement of this tower; but the remains which were removed as such to Westminster Abbey, in the reign of Charles II., were discovered below a staircase in the White Tower. A brass tablet at the foot of the staircase now records the belief in this discovery.

We have before now given some particulars of the interior of the Bloody Tower, but since we did so several prisoners' marks, within and near the recess of a window of an apartment close to the entrance from Tower-green, have been found, on removing some of the plaster and whitewash with which the place had been covered; and further search will probably show more of these interesting relics. One of them seems to have been cut by one Rossel, a Scot, who was probably one of the Scottish Royalists captured by Cromwell. The prisoner refers to his sufferings in the cause of his country and his chief, and commits himself to the will of the Supreme Almighty God, to whom his ills are known. His father's life had been spent in loyal service to his chief, but he had died in time of peace. He asks for the divine protection, and that it may please the Lord of the life of man to incline his enemies to peace.

The Bell Tower, in which the alarum bell of the fortress is hung, has been of late much changed in appearance. Buildings, which had been erected against it have been removed, and parts of it have been faced. The same operation seems to have been carried on throughout the whole length of this inner portion of the Tower defences.

Although it is not an improvement in a pictorial point of view, the draining of the moat must improve much the health of the garrison and the surrounding neighbourhood. Parts, as shown in our sketch (fig. 2), are now used as a parade-ground for the troops. In others grotto work has been constructed, and little gardens are laid out. At any time, however, if needed, the water could be brought in again from the Thames at very short notice.

Next to the Bloody Tower and Traitors' Gate the most picturesque part now remaining is the entrance near the Warder's Lodge, of which we give an engraving (fig. 3); and with this we must end our little tour in the Tower.

SQUARE CHURCH, HALIFAX.—MR. JOSEPH JAMES, ARCHITECT.

SQUARE CHURCH, HALIFAX.

AMONG the many new and handsome structures erected of late years in the town of Halifax, this is one of the most conspicuous, inasmuch as it is almost the first that strikes the eye of the traveller as he enters the town from the railway. It has been built by the side of the chapel erected during the last century in the old-fashioned style then in vogue; and the contrast between the two chapels adds one more proof that the prevailing improved taste for ecclesiastical buildings is not confined to the Establishment. The new chapel of the Independents has been erected mainly through the instrumentality of Sir Francis Crossley and his brothers, to whose united liberality the town is in other ways very largely indebted.

It has been the endeavour of the architect so to adapt the forms and details of Gothic architecture as to make them conform to the requirements of the form of worship used by the Congregationalists.

The form of the building is that of a nave with cloisters on each side, north and south transepts, with a tower and spire in the angle, formed by the junction of the latter with the nave, a small spirelet on the opposite side, and a projection for the organ in place of the usual chancel. The nature of the site has, however, greatly cramped the architect.

The eastern end of the nave, shown in our view, abuts upon the square road, the gable rising to the height of 78 feet, surmounted by a metal cross. In the upper part of the gable is a four-light window, beneath which is a large window of seven lights, 36 feet in height, the mullions terminating at the top with circles, with suitable tracery.

Under this window is the entrance to the seats on the ground-floor of the nave, by a deeply-recessed doorway, having a double niche on each side, and surmounted by a small gable. The foliage on the capitals of the pillars, as well as the whole of the carvings, have been well executed by Mr. J. W. Seale, of London. The pillars are of serpentine marble. The door itself is of oak, with richly foliated hinge-irons. The sides of the nave are divided into bays by deep buttresses, within which run the cloisters,—rather low-covered passages into the transepts, entered by doors in the first bay, and lighted by broad flat-arched windows in the other bays. The ends of the transepts have, on the ground stage, three single-light windows, and in the gables wheel-windows, about 16 feet in diameter, filled in with tracery.

The tower and spire mount up to about 235 feet, including the lofty vane, and have in the second stage a large illuminated clock, by Messrs. Moore, of Clerkenwell.

Within, the architect has been compelled to consider more closely the requirements of Independent worship than the peculiarities of the Gothic style. These requirements are, of course, that the pulpit should be the main object, subsidiary to nothing, and seen by all; and the roof should be so constructed as to convey to every corner of the building the inflections of the voice of the preacher.

This plan enables the former to be easily accomplished. There is a nave 95 feet long, 45 feet broad, and 45 feet high, with a transept on each side; the eastern end of the nave 28 feet wide. Two passages, 6 feet 6 inches wide, and flagged with stone, run up the nave. All the pews are of oak, of uniform pattern, with low backs, and each furnished with book-boards, cushions, carpet, and drawer for books. The passages are also carpeted. At the end of the chapel is a raised dais, surrounded by a light oak railing, with a kneeling-board outside, and with appropriate communion table and chairs inside. The pulpit, which is of Caen stone, may be ascended from either side by a low flight of broad steps, also in Caen stone, but with encaustic tiles inserted, the balustrade being pierced with circular openings inclosing pierced quatrefoils. The pulpit itself springs independently of this ascent, and is octagonal. Upon the eight sides of the base are sunk medallions, charged with the sacred emblems of the Passion, in the following order:—1, the cross; 2, the sacred monogram, I. H. S.; 3, the crown of thorns, the hammer, and nails; 4, the ladder, the sponge upon a reed, and the spear; 5, an angel; 6, the seamless coat; 7, the scourge and the post; 8, the emblem of the Holy Spirit. The mouldings over are carved with vine-leaves and corn, and each of the sides of the pulpit itself is a double arch, a pinnacle from the front arch being continued upwards and outwards to support the book-board.

In order to secure the required acoustical properties of the building, the architect has adopted a five-sided panelled ceiling, the whole of which has been coloured and emblazoned from his designs.

The trusses of the roof spring from the side walls from carved caps, supported by marble shafts resting upon corbels, each carved with angelic busts. These figures have each a flat nimbus, and their wings are folded backwards, and they are represented in the following acts:—1, the angel ringing the sacred bell; 2, angel playing the triangle; 3, angel playing the viol; 4, angel playing the tabret; 5, angel unrolling a scroll; 6, angel playing the harp; 7, angel playing the cymbals; 8, angel in the attitude of adoration.

The whole of the windows are filled with quarried glass, with a sparing use of deep colours, by Messrs. Lavers & Barraud, of London.

Accommodation is provided for 1,240 sitters, and there is an ample vestry in the rear of the building, with a separate entrance.

The whole of the works have been designed by Mr. Joseph James, of London, and carried out by Messrs. J. & W. Beauland, of Bradford; Mr. J. Dilworth being clerk of the works.

The total cost has amounted to about 18,000*l*.

THE LAW OF THE FOOTPATH.

NO one who has been acquainted with the streets of London for the last half-century can fail to be struck by the increased and daily increasing difficulty of locomotion, without wishing for some definite regulations that might render a walk through the streets more easy and agreeable than at present. I have long hoped that the necessities of the case might have led to some police regulations; but, having waited in vain, I venture to offer a few suggestions for regulations which, if carried into practical operation, would greatly modify the evil, and render a large proportion of those who traverse the streets on foot willing supporters of any defined legal or police regulations on the subject.

Carriage and horse traffic has long since engaged the attention of the Legislature, and an Act of Parliament prescribes its course. I do not, therefore, propose to touch upon that traffic further than to lament that the provisions of that Act are not more rigidly enforced. My remarks are, therefore, directed entirely to persons on foot, for whom (as far as I know) there is no law beyond *custom*, which is but little known beyond the City, and as little heeded by the majority, who are either ignorant of the custom of the City, or are too snobbish to be guided by any other motive than that of intense selfishness, so observable in the manners of the present day.

We have high authority for the proverb, "Train up a child in the way he should go, and he will not depart from it." It is with children, therefore, I would begin, by teaching them *practically* the *right* and the *wrong* side of the path they walk upon. Nothing could be more simple than the lesson; and even amusement might be afforded in the practice of it.

The rules would be as follows (and they are, in fact, the rules of the road at sea established by law):—When walking keep the *right* shoulder to the wall; and if there are others on the same path do not struggle out into the middle of it. When *passing* another person, consider that person as part of the wall, and pass with the *right* shoulder nearest to him.

When two persons are *meeting*, let *each* keep the *right* shoulder to the nearest wall on his *right* hand, and a collision is impossible.

When two persons are *crossing* from different directions, the person whose *right* shoulder is nearest to the other should give way, and allow the other to pass in front of him.

These rules, few and simple as they are, would, if taught to children as an amusement, soon produce a sensible effect; and if enforced by law, would render all well-disposed persons supporters of that law.

I am now about to undertake a more serious work, a suggestion for the movement of crowds, or people in masses, such as may be seen in the streets on occasions of illuminations, &c. The *principle* is exactly the same as that I have adverted to, but upon an extended scale. Let *all* persons on the foot pavement, on *each* side of a street, move along it with the *right* shoulder in the direction of the wall, and the whole difficulty is surmounted; and upon these *special* occasions let large printed fingers, pointing in the proper direction, be pasted on every lamp-post.

If this system were enforced by authority, the "roughs," who enjoy themselves on these occasions, would soon meet their match in the well-disposed, who go out to see the sight only, and who would readily assist the police in enforcing *known* regulations for maintaining order.

HOME-GROWN FRUITS.

THE scarcity of such homely and wholesome fruits as apples and pears, plums, and even grapes, all of which can be grown both cheaply and well, throughout England, Scotland, and Ireland,—a scarcity with limited exceptions, as in the apples of Herefordshire and other parts of the West of England,—is somewhat surprising. It is the opinion of Mr. Roach Smith, who has recently drawn attention to this subject,* that the plantations of fruit-trees in this country do not exceed those of the time of Charles II. And what may be the result of such a scarcity of wholesome fruits on the health of the community, or what the extent of disease to which it gives rise, it is hard to say. But there can be no doubt that great evil must have resulted, and must still result. The children in Christ's Hospital on one occasion were so infested with cutaneous eruptions that they had to be dispersed; and it was discovered that the evil arose from a deficiency of fruit and other vegetable food. There cannot be a doubt that man is essentially, or by nature, a frugivorous animal. It has been wrongly concluded from the formation of his teeth that he was designed to be carnivorous, but his dental conformation closely resembles that of the monkey tribe, and these are not carnivorous, but frugivorous; the teeth mistakenly supposed in man to have been designed for tearing flesh, being in fact those requisite for disorganizing fleshy fruits. There is an undue leaning in the English mind towards animal food, even if we regard mankind as omnivorous; and it is well known that men as well as horses can be sustained in good condition by a strictly vegetable diet. We are not inclined, however, to insist on an exclusively vegetable diet: indeed, such food as milk—mother's milk itself—is animal in its nature, and what food can be more wholesome than good milk or fresh eggs? Nevertheless, vegetable food, and particularly fruit, is far too little used in this country, with the exception of that universal favourite the potato—the *pomme de terre*—which Cobbet, fortunately, in his mad hatred of it, did not succeed in casting out of use.

The planting of apple, pear, and other fruit-trees ought to be far more general than it now is; and the fruit hence far more abundant. Heavy crops might be grown in ground where other vegetable products would not thereby be hindered from coming to maturity. Gooseberry and currant-bushes are also a profitable crop, and ought to be greatly increased. We have often urged the advantage of planting the waste spaces on each side of railways; and were apple and pear trees, and such like, cultivated on the thousands of acres throughout the country thus lying waste, as Mr. Smith suggests, an important increase of revenue would accrue to the companies. In France the advantage of planting waste spaces with fruit-trees is better known than with us.

DINNER TABLE DECORATIONS.

SIR WENTWORTH DILKE'S offered prizes for groups of fruit and flowers for the dinner-table produced considerable competition at the last flower show in the Horticultural Gardens. The prizes were gained by Lady M. Rokeby, Mrs. J. W. Bliss, and Mrs. Walter Fawcett; while "commendations" were bestowed upon the productions of Mr. Alfred Salter, Lady C. Kerrison, and Lady Holmesdale. The jurors of this department were the Marchioness of Waterford, the Countess of Bessborough, and Lady Dorothy Nevill. The groups submitted were generally a great improvement upon the exhibition of last year, and with few exceptions there was something to be admired in all. The one which obtained the first prize had a gorgeous centre of tropical birds, on branches of fern, but was much confused with grasses falling from glass tubes which made it inelegant in form, and the side pieces did not carry out the central idea. Opinion, in which we coincide, was decidedly against the selection of it for the first prize. The second prize group was very good: the sides were arranged according to Mr. March's design. The delicate yellow of the roses, with the blue corn-flower, and

* On the Scarcity of Home-grown Fruits in Great Britain; with remedial suggestions. By C. R. Smith. In a letter to Joseph Mayer. Liverpool: Brakewell, Cook-street. 1863.

the deep red cherries with the white arums below were beautifully contrasted. The top of the centre was spoiled by a red parroquet; but it undoubtedly deserved, for the care bestowed and its effectiveness, to stand before No. 1. Mrs. Walter Fawcett's group was an improvement on the very excellent design for which that lady received a prize last year, and, like No. 2, certainly deserved to stand before No. 1. It was carried out in pink and white, and was remarkably graceful in outline. As touching the whole, we would say the grouping of *fruit* and flowers for decoration does not seem to us altogether desirable. If fruit be placed upon a table, it is of course at the service of the guests, and if removed the design is at once destroyed.

THE LATE HERR L. FÖRSTER, ARCHITECT.

WE hear with great regret of the death of Herr Ludwig Förster, of Vienna, on the 16th instant, in the 67th year of his age. Förster was the editor of the *Bauzeitung*, and an architect of several important buildings. He had been ailing for some time, and a few months since went to Venice in search of health. He was a man of sound judgment, of the noblest principles, notable for his firmness of character, and was held in deservedly high estimation at Venice, where, as a politician also he took part in the leading liberal movements of the day.

DISTRICT SURVEYORS AND RAILWAY COMPANIES.

WITH reference to a paragraph in our last, Mr. Sibley says he has received a communication from the company, in which they deny liability. He has sent them a further communication, in which he says:—

"In order to expose the entire futility of the arguments adduced, I have only to inquire, whether in the event of the absorption of the whole of my district by the Metropolitan Railway I should or should not be entitled to compensation? I have yet to learn that parliamentary powers can admit of confiscation as a principle. My course of proceeding in the matter will be by memorial to the Board of Trade, and, through Lord Derby, to the House of Lords."

The question is one that the district surveyors as a body should take up.

THE MURDER OF A MILLINER.

MR. DAWSON is to ask the Home Secretary whether his attention has been drawn to the case of Mary Ann Walkley, deceased, and the wording of the verdict delivered by the coroner's inquest impannelled to investigate the circumstances of her death; and if it would not be desirable and humane to introduce legislation for the purpose of limiting and defining the hours of labour in millinery and other establishments where females are employed. The case is this. Mary Ann Walkley, aged twenty, in the employ of Madame Elise, Court dress-maker, 170, Regent-street, working with thirty others, was taken ill; and on Monday morning in last week, her sleeping companion found her dead in bed. The medical evidence at the inquest was to the effect that the bed-rooms were decidedly unfit places for any one to sleep in, and more particularly in the state of health in which the deceased had been. The jury returned the following verdict:—"That the deceased died of apoplexy; but there is too much reason to fear that her death was greatly accelerated by working long hours in a crowded workroom, and sleeping in a close, badly ventilated bed-room." An affecting appeal is made in the *Times* by one of this poor girl's fellow-workwomen, with the signature of "A Tired Dressmaker." She says:—

"I work in a crowded room with twenty-eight others. We are called in the morning at half-past six; and in ordinary times we work until eleven at night; but occasionally our hours are much longer: on the Friday before the last Drawing-room we worked all night, and did not leave off until nine o'clock on Saturday morning. At night we retire to rest in a room divided into little cells, each just large enough to contain two beds. There are two of us in each bed. There is no ventilation: I could scarcely breathe in them when I first came from the country. The doctor who came this morning said they were not fit for dogs to sleep in. Although we do not complain of our house, which is better conducted than many, we should be so glad if some plan could be discovered by which we could get a little less work and a little more air." The Earl of Shaftesbury has called the attention of the House of Lords to the subject; and Earl Granville expressed a hope that Lord Shaftesbury would himself bring in a bill as to it, although he felt that there were difficulties in the way, as had been shown by a committee on a former bill.

This death is a practical illustration of the evils of overcrowding, pointed out by us *ad nauseam*. Hundreds of young girls are thus sacrificed every year; but as death does not always occur so suddenly as in this case, and there is no coroner's inquest, the cause escapes condemnation. There must be legislation to stop this wholesale murder.

CHURCH-BUILDING NEWS.

Cromer (*Norfolk*).—The church here has been restored by Mr. J. H. Brown, of Norwich, architect, at a cost of 1,400*l.*, and at the sole expense of Mr. B. Bond Cabbell. Messrs. Somers & Chapman were the builders.

Ely.—We are requested to state that the covering with lead the external woodwork to lantern tower of Ely Cathedral was undertaken by Mr. Matthew Hall, of Marylebone, plumber.

Costock (*Notts*).—The parish church of St. Giles, Costock, has been re-opened by the Bishop of Lincoln. Nearly a year has elapsed since the restoration of the church, as regards the nave and the general structure, was first commenced. The architect for the restoration was Mr. Scott; and the contractor, Mr. S. Hall, of Leicester. The tracery of the windows has been restored. The plaster ceiling, which formerly formed the roof of the edifice, has been removed, to make way for an open woodwork roof of high pitch; and some of the rafters in the chancel, which are probably five hundred years old, were found to be in such a sound condition as to be fit for further use. The whole of the nave was restored at the expense of Mr. Wild, of Costock Hall. The nave is now re-roofed with high-pitched timber, the beams and open rafters being framed polygonally, and a piece of the ancient wall-plate is framed in. A portion of the west wall of the nave, formerly the eastern wall of the tower, has been removed, and a new two-light window put in its place. There has also been a complete light inserted in the south side of the nave. The estimated cost is rather under 900*l.* The chancel arch is new, and the altar has undergone some renovation. Mr. Scott designed the communion rails, but none of the other carving was executed under his direction. The lamps were designed by the Rev. Frederick Sutton, of Catton, Norfolk.

West Retford.—It being intended to enlarge and restore the parish church of St. Michael, at West Retford, tenders for carrying out the work have been obtained as under. The amounts are irrespective of the value of the old materials, which have been variously estimated at from 170*l.* to 280*l.*:—

Messrs. Tomlinson & Son, East Retford	£1,822
Mr. Job Hopkinson, East Retford	1,770
Mr. John Wilson, West Retford	1,727
Messrs. Wilson, East Bridgeford	1,579
Mr. Charles Cawthorne, East Retford	1,522

The last tender was accepted.

Shenfield (*Essex*).—Shenfield Church has recently been restored by Mr. Bartlett, of Brentwood. This is one of the very few that have clustered oak columns of solid timber with carved capitals and bases. Formerly the arches connecting these columns were of oak also: these will be replaced; the iron shafts that had been introduced being removed. The chancel arch will likewise be of oak, with proper mouldings. The interior of the church will be much enlarged by throwing the base of the tower open within, and enlarging the chancel. Greensted Church, near Chipping Ongar, Essex, has, or had until recently, a portion of its exterior walls formed of roughly-hewn oak-trunks.

Waldron (*Sussex*).—The men employed upon the erection of the new church, at Cross-in-Hand, in this parish, have had a rearing feast at the expense of Mr. J. G. Boucher. The meu, abont forty in number, were presided over by Mr. Atkinson, the foreman of Mr. Alexander Cheale, who placed a liberal supply of refreshments upon the table, and who is the contractor for the building, at a cost, it is said, of from 1,200*l.* to 1,500*l.*, which expense is borne by Mr. Boucher, the proprietor of Heatherden estate, in this parish. Mr. Cheale has also just completed the restoration of Waldron parish church, at a cost of 1,500*l.*

Little Horsted (*Sussex*).—The parish church of Little Horsted has just been restored and reconsecrated. The church, which is situate on an eminence, and is near the residence of Mr. Barchard, at whose cost the work has been done, formerly consisted of a chancel, nave, and tower, with a small vestry; the whole being of various styles of architecture. The tower remains nearly as before, and is Perpendicular. The chancel did not stand in a direct line with the nave, but was turned about two feet in a more north-easterly direction, which peculiarity the architect has preserved. The new work is built of axed sandstone, from the forest, with Bath stone dressings. The floors, excepting where boarded, are laid in Minton's tiles. The seats are all of oak; those in the chancel, as are also the chairs there, being carved. A reredos of marble mosaic surmounts the altar table, running up to the stained glass window, the gift of Mrs. Barchard. An oak roof, tiled in bands, covers the church, and a small stone turret has been added to the tower, which seems never to have been finished before. A new peal of bells has been got from Mr. Mears, of Whitechapel. Mr. Scott was the architect; and Mr. T. Cane, of Brighton, the builder.

Havant (*Hampshire*).—A clock has been ordered from Mr. Benson, of London, for the church here, to be paid for by the local board of health. It will show the time on two dials, each 5 feet in diameter; strike the hours on a bell of 18 cwt.; and the four quarters on two bells, respectively 8 cwt. and 10 cwt.; wheels of gun metal. A condition in the contract for this clock is, that the interior arrangement of the tower is not to be disturbed in any one particular.

Winchester.—The new church of Itchen Abbas, in the Norman style, erected on the site of the ancient Norman edifice (which consisted of a nave and chancel), has been consecrated by the Bishop of Winchester. The designs were by Mr. William Coles, city surveyor, and the contractor was Mr. Charles Fielder, of Ear-end, the price being about 1,100*l.* In the pulling down of the old church it was found that the original floor of it had been destroyed at some distant date, and another put in at a considerably lower level, 1 foot 9 inches, this change being shown by the bases of the Norman chancel arch pillars. This arch, which is ornamented with the billet moulding, and the south arch of the nave, are the only parts of the original church retained in the present edifice, which consists of a nave and chancel, in length 58 feet in the clear, and two transepts, 46 feet 8 inches in length. The pavement is of Poole tiles in red, buff, and black colours, except in the chancel, where the tiles are from Minton's manufactory, the pattern being taken from those of St. Cross Church, and bearing, like them, the monitory legend in ancient lettering, "Have mynde." The east window is decorated with stained glass, representing the symbols of the sacrament (the Pelican), and of the Saviour (the Lamb), from the manufactory of Mr. C. Gibbs, of London. The benches and seats, which will accommodate 200 persons, including thirty-two seats for children in a gallery over the vestry and heating room, are in stained deal, as also are the open timbers in the roof. The apparatus for heating is by Messrs. Haden & Son, of Trowbridge. The three bells (two ordinary bells and a sanctus), from Warner's foundry, are placed in a bellcote at the apex of the western gable, the eastern gable being decorated with a cross. The east window on the exterior presents the appearance of a two-light window, having a circular opening above the centre of the arch. Inside, these are converted into one window, by bands of transition ornaments. The stonework was by Mr. S. Newman.

Malvern.—The foundation-stone of the Cowley Park new church has been laid. The building, when finished, will accommodate over 300. It will consist of nave, aisles, and chancel, the former being 46 feet by 42 feet, the latter 25 feet by 20 feet. It is intended to extend the nave 19 feet, so that the whole length of the structure will be 90 feet. The design, which is of Gothic character, is the work of Mr. Street, of London; and the contractor is Mr. Griffiths, Eldersfield; Mr. Jos. Griffiths, brother to the contractor, being foreman. The land on which the church is being built is the gift of Earl Beauchamp. There will also be room for the rector's house, school-rooms, and cemetery.

Acornbury (*near Hereford*).—The church here according to the *Hereford Times*, has been re, opened after restoration by Mr. Scott and under the superintendence of Mr. Chick. There was an immense accumulation of soil around the walls, so that there was a descent of two or three steps into the interior; a condition which created a damp and unhealthy atmosphere. Near the porch a wall ran westward to a distance of about 20 feet

and was overgrown with gigantic ivy, which had entwined itself in the walls of the church to such an extent as completely to destroy the south-west angle. This angle had, therefore, to be entirely taken down and rebuilt. With this exception, the original walls remain; but the foundations have been underpinned, the accumulated soil cleared away to admit of proper drainage, and the walls themselves re-pointed. It was also found that the walls had bulged considerably, and this has been remedied by four tie-rods. The roof has been covered with Broseley tiles, and the "dove-cot" has given place to a bell-turret of oak, with shingle spire surmounted by a vane. The geometrical crosses at the east and west gables remain untouched; the art of stone-carving having, according to the judgment of Mr. Scott, not made such advance as enables us to improve upon these. Internally, the floor has been elevated nearly to a level with the outer ground, and has been paved with Godwin's black and red tiles.

Eardisley (*Hereford*).—A clock has just been erected in the church here by the parishioners out of compliment to Mr. W. P. Herrick, who has recently expended between 2,000*l.* and 3,000*l.* in the restoration of the church, which is shortly to be opened. The clock is by Mr. Bosworth, and the dial plate faces the turnpike road leading from Hay to Kington.

Cilrheyden (*Pembrokeshire*).—The new church here has lately been opened by the Bishop of St. David's. It has been built, at a cost of about 1,100*l.*, from the designs of Mr. Withers, architect. The plan consists of nave, 58 feet by 22 feet; chancel, 28 feet by 18 feet; vestry, and south porch. The walls are of local stone, with Box ground stone-dressings. The roof is open-timbered, covered with slate, and red tile ridge and crest. A double bell-gable at the west end contains the ancient bells, and is surmounted by a weather-cock 65 feet from the ground. The seats are all low and open, and are all formed of Quebec red pine. The passages and chancel are paved with Staffordshire tiles, and the reredos is a composition of tesseræ, stone, and marble. The style is Geometrical Decorated. The builder was Mr. C. J. Davies, of Newcastle Emlyn.

Congleton.—The new church in Odd Rode will be built as a memorial to the late Mr. Randle Wilbraham, by his family, on an elevated site in the centre of the lower part of the township. It will bear the name of All Saints' Church. The work has been commenced. The style is Geometrical Decorated, though that of the chancel partakes more of the Early English character, with a considerable amount of decoration. There will be a memorial chancel at the east end of the south aisle, under which, but opening outwardly, will be a vault for the use of the Wilbraham family. For the large east window the painted glass has been given by the Hon. Catherine Arden, niece to the late Mr. Wilbraham. The stone of which the walls will be built is from the quarries at Kerridge: the facings on the outside will be of Mow stone, as also the ashlar linings in the interior. The arches, shafts, and other ornamental portions will be of Hollington stone.

Bebington (*Cheshire*).—The parish church of Bebington has just had put up in it a *reredos* of Caen stone, elaborately ornamented, and inscribed with the Ten Commandments; and also a memorial window, by Mr. Wailes, of Newcastle, under the centre of which is inserted an engraved brass, by Messrs. Hardman, of Birmingham. These will form memorial of the late Rector Feilden. The expense a has been borne by subscription. The *reredos* has been executed by Mr. Stirling, from designs by Messrs. Hay, architects.

Liverpool.—The chief corner-stone of a new Wesleyan Methodist chapel, in connexion with the Seacombe circuit of that denomination has been laid, at the junction of Laird-street with Conway-street, near Claughton. The erection of the chapel, with a school attached, is a home missionary undertaking. The land has been given by Mr. Wm. Jackson, M.P. About one-half the necessary sum of 1,200*l.* has been contributed for the erection of the building. The architects are Messrs. W. & J. Hay, of Liverpool; and the builder is Mr. J. Westmoreland, of this town. The area of the ground on which the chapel is being erected is 87 feet by 70 feet. The chapel fronts Conway-street. It is in the Early Decorated style, and consists of a central nave, to which are attached a vestry and two small rooms, behind which is a large class-room. The length of the chapel itself interiorly is 56 feet, the width 30 feet, and it will accommodate about 400 persons. The height from the floor to the apex of the roof is 29 feet. Over the principal entrance there is to be a rose window, and the gable is surmounted with a belfry. The chapel will be principally built of Stourton rubble, with Stourton stone dressings.

STAINED GLASS.

Bitton Church (*Gloucestershire*).—The five-light Perpendicular east window of Bitton Church has lately been filled with painted glass by Ward & Hughes, of London. The design consists of an arrangement of subjects. The principal subject, embracing the three centre lights, is the "Ascension." The figures are well proportioned, and the apostles grouped below seem possessed with the most reverential feeling, beholding the ascending Saviour, who is surrounded by an auriole of angels. The side lights, and below the three centre lights, are panels which form the setting, or, as it were, the frame of the picture, which occupies the three centre compartments. The two side lights are filled with four subjects, in medallions upon a ruby ground, viz., "The Nativity," "Baptism," "Crucifixion," and "Resurrection." At the foot of the principal subject are the words,—"This same Jesus which is taken up from you into heaven, shall so come in like manner as ye have seen Him go into heaven." Beneath this are the three ornamental panels with entwined scrolls. At the foot of the glass, and running across through the five lights, is the dedication and memorial inscription, setting forth that it is erected in honour of God, and in affectionate memory of several members of the Hollings and Boscawen families, who died in India; with the text, "But the souls of the righteous are in the hand of God, and there shall no torment touch them."

All Saints', Langport (*Somerset*).—A memorial window has been erected in this church by Capt. Stuckey, in memory of his grand-parents, the late Mr. and Mrs. Stuckey, of Hill-house. It represents the birth, burial, resurrection, and ascension of Jesus, and was manufactured by Mr. Gibbs, of London.

Calne Church (*Wilts*).—A new east window, with stained glass by Mr. Clutterbuck, of London, has been presented to this church by the Marquis of Lansdowne. The edifice is about to be restored on plans by Mr. Slater, architect.

South Ossett Church (*Yorkshire*).—A stained glass window has been put up at the east end of the chancel to the memory of the late Mr. J. F. Carr, of Carr Lodge, a magistrate and deputy lieutenant, by his widow. The subjects of the window are arranged in three bands of colouring across the three lights, the panels being separated by narrow bands of grisaille white glass crossed by coloured stripes. The subjects are the following from the life of our Lord:—The Annunciation, Nativity, Baptism, Temptation, Agony in the Garden, Crucifixion, Sepulture, Resurrection, and Ascension. The tracery contains our Lord in Glory, with angels on either side in attitudes of praise. The whole of these subjects are upon a diapered blue ground. The window was designed and painted by Mr. F. Preedy, of London.

All Saints', Newcastle.—The two windows erected some years ago, during the incumbency of the late Rev. Robert Green, M.A., have been removed, and placed in the north and south windows immediately above the pulpit. The north contains the figure of Peter, the south that of Paul, each surrounded with ornamental foliage, suspended from which are the armorial bearings of the various subscribers. The chancel has been improved by the opening up of the centre window; and instead of two there are three memorial windows now inserted. The centre window contains the group of the Crucifixion: the north window contains the Resurrection of our Lord; and the south window contains the group of the Ascension of our Lord.

Glasgow Cathedral.—Three new windows have just been erected in Glasgow Cathedral, and as additions to the series of Bible illustrations now nearly completed. The subjects of the windows follow each other in chronological order, the nave containing exclusively subjects from the Old Testament. The artists have not followed the order of the series in the execution of the windows; and consequently it is only now that the plan of the whole becomes obvious, as the spaces are filled with painted glass. No. 1, the subject of which is Adam, is only now erected: the four following subjects—Noah, Abraham, Isaac, and Jacob—have been in their places for some time: within the last week or two Adam, Joseph, and Moses have been added, completing the plan on the north side so far as the triplet windows are concerned. The first window is one with three subjects—namely, "The Expulsion from Paradise," "Labour the Consequence of Transgression," and "Sacrifice the Means of Reconciliation." Colour is obtained by the introduction of angels in all the subjects. This window is the gift of Mr. Scott, of Kelby; and is executed from the designs of Mr. Frees, a Viennese artist, pupil of Kaulbach. The next new window is the gift of Sir James Campbell, and of his brother, Mr. Campbell. The subjects are from the history of Joseph, and the artist was Professor Liebertz. The window, with events from the history of Moses, is by Mr. H. Ainmiller, and is erected to the memory of the late Mr. Ewing, of Strathleven, by his nephews. The centre subject is "The Brazen Serpent;" the first, "The Finding of the Child Moses;" the last, "The Consecration of Joshua."

METROPOLITAN CHURCH BUILDING.

New Church in Pimlico.—On Saturday last Earl Grosvenor, M.P., laid the chief stone of a new church, which it has been determined to erect in St. George's-square, Pimlico. The church, which is dedicated to St. Saviour, is in the district of St. Gabriel and the parish of St. George, Hanover-square, and is to be erected at the expense of Mr. George Cubitt, M.P. for East Surrey, and will have an ecclesiastical district assigned to it. The proceedings connected with the inauguration of the new building were of a somewhat unusual character. Mr. Cundy is the architect. During the last few years the neighbourhood has so largely increased, that it was thought desirable to erect the new church, although, through the exertions of Mr. Belcher, a new iron church was opened only a few months since on the banks of the river. This temporary church it is intended to enlarge.

New Chapel in the Walworth-road.—The foundation stone of a new Wesleyan chapel has been laid by Sir Morton Peto, Bart., M.P. This chapel is to be erected upon the large piece of vacant ground at the commencement of the Walworth-road, and on the southern side. It is intended for the use of the church and congregation now meeting in Lion-street, New Kent-road, and is rendered indispensable by the approaching termination of the lease of the present building, erected in 1806. The site will have a double frontage, one in the Walworth-road, and another in a new street, by which facilities will be secured for the erection of school buildings apart from the chapel, and for which a special fund has been opened. The chapel will have 800 sittings, besides pews for 100 Sunday scholars. Adjoining the chapel will be built on the ground floor a lecture-hall to hold 150 persons, with ministers' and deacons' vestries; and in the upper floor two large class-rooms and a ladies' vestry. The estimated cost is 5,200*l.*, part of which has already been raised.

St. Thomas's, Camden Town.—The Church of St. Thomas, Elm-road, Camden New Town, was consecrated on the 18th inst. by the Bishop of London.

St. John's, East Dulwich, Surrey.—On the 18th inst. the foundation stone of the new Church of St. John the Evangelist for this district was laid by Mr. C. J. Selwyn, Q.C., M.P., who has presented a site for the purpose. A public meeting was held in October, 1861, to consider the want, which has been much felt, of increased church accommodation for the neighbourhood; but since that time many impediments have arisen to prevent the committee from carrying out the resolutions which were then passed. The difficulties are, however, now overcome, with the exception that funds are required. The estimated cost of the church is about 6,650*l.* More than half that amount has already been subscribed, and the committee are using strenuous endeavours to raise the required sum; being compelled to look to others, besides the residents in the district, for assistance. There are to be sittings for 850, 200 at least of which will be free, for the use of the poor. The architect is Mr. Charles Baily.

PROVINCIAL NEWS.

Bradford.—The Beaumont Testimonial Drinking Fountain has been opened for use. It is situate at the Undercliffe entrance to Peel Park. The style of architecture adopted is Romanesque. The whole structure is raised on two broad steps of octagonal shape 13½ feet square. The lowest course of the fountain itself is circular, consisting of one stone 8½ feet diameter; and as the original intention was that this stone should form a reservoir of water for the use of dogs, it is hollowed

out and moulded on the edge, much after the fashion of the basin of an ordinary fountain. From the centre of this basin rises a square plinth and moulded base, supporting the body of the structure, which is also square, with polished granite shafts at each angle, supporting on carved capitals a semicircular arch or archivolt. Within these arches, and between the granite shafts, are four niches, one on each side, containing groups of natural foliage, whence issue four small streams of water, which are received into as many basins, in the form of large shells of polished Sicilian marble, resting on grotesque heads as corbels. Above the archivolt the monument becomes octagonal, and is surmounted by a lamp, the top of which is 28 feet above the ground. The supply of water is regulated by push-valves. The designs and details were by Mr. E. Milnes, architect; and the contract has been carried out by Messrs. F. Stake & Co., sculptors.

York.—The old Masonic Hall in this city having been removed in order to effect the Blake-street improvement, the members of the craft determined upon the erection of a new hall, which has just been completed and opened with Masonic ceremonial. "The new Masonic Hall," says the *York Herald*, "though possessing some claim to architectural merit as seen from the exterior, was never intended for mere outside show. A serviceable building, with proper interior accommodation, was the prime consideration, and well has that been obtained. Few persons merely glancing at the building from Blake-street would imagine that it was the cover to a classic hall, 40 feet long by 30 feet wide, with walls divided into panelled compartments by lofty pilasters, surmounted by Corinthian capitals, with proper bases, and large and fully-ornamented frieze and arched mouldings, from which, on a coved cornice, the horizontal ceiling rests. The ceiling is divided into three compartments, two of which admit light through stained glass, whilst the centre is appropriately filled with stained glass, and the centre with Masonic symbolism. The hall is entered by means of folding doors; and, turning to the right or left under the organ-loft, you are at once in the presence of the strangest compound of forms and objects, that are truly a puzzle to the uninitiated; and you wonder what the thrones, pedestals, implements of workmanship, orders of architecture, books, globes, brazen columns, mysterious paintings, quaint carpets, &c., can be for; and, having most signally failed in elucidation, you return once more to an examination of the room itself and see that one end has two sets of projecting columns slightly raised from the other sides by a platform. There is a throne between these columns, and a slender panel on each side which we are mysteriously informed are for statues of St. John. Looking from the raised platform you face where you have entered, and here is the organ-loft, supported by square columns. Returning by the way you have come, there is a spacious vestibule, on each side of which there is a preparing and reception room, and on the right a semicircular staircase leading to a room for the assembling of the members. This room is about 30 feet long, with a fireplace at each end. It also has an entrance to the organ-loft, and looks down into the body of the hall. The doorway is supported by Corinthian pilasters. The front is of stone, and the windows are of plate glass. The north side is of divisional compartments of brick, from a stoned dado and quoined cornice. The other sides, facing private property, are plain. The architect was Mr. J. E. Oates, a brother of the order. It is intended to decorate the interior with colour. The following tradesmen, all residents of this city, have executed the various contracts connected with the work, viz., Mr. Thomas Kelleyn, bricklayer; Messrs. Bowman & Co., freemasons; Mr. W. Coates, joiner; Messrs. Hodgson, plumbers; Messrs. Cattley, slaters; Mr. Henry Young, plasterer; Mr. John Fryer, smith, &c.; and Mr. Gibson Hartley, painter."——Some definite action has at length been taken with regard to the erection of a covered market and corn exchange in York. The agriculturists are to have a conference with the corporation on the subject.

REPORT OF THE ECCLESIOLOGICAL SOCIETY.

At the annual meeting of the Society, held on the 19th instant, the report of the committee was read. It brought under review various works, for the most part already mentioned in our pages. We take a few passages:—

"We are glad to announce that, although nothing has yet been done towards the restoration of the chapter-house of Westminster this year, yet the Chancellor of the Exchequer has registered the application for a future year.

The committee authorized the president to petition against the spoiling of the view of the west front of St. Paul's Cathedral by carrying a railway viaduct across Ludgate-hill. They fear that the scheme of destroying some of the City churches is not unlikely to be put into operation, in spite of all opposition; but it is satisfactory to have to record that, within the last few days, the parishioners have successfully resisted a scheme put forward under the auspices of the Bishop of London's Act for the demolition of the remarkable church of St. Mary Woolnorth (Hawkesmoor's *chef d'œuvre*), which it was proposed to destroy for the convenience of the General Post-office.

The committee desire to call the special attention of church-restorers to the necessity of providing, in their specifications, for the preservation of ancient remains. Great scandal was justly caused during the year by the fact that the contractor for the repairs at Hexham Abbey claimed as his own, and sold a painted triptych which was discovered during the progress of the works. The beautiful alabaster fragments from the reredos of Toft Church, near Cambridge, which are exhibited this evening, escaped the fate of being considered as 'old materials,' by the zeal of Messrs. Rattee & Kett, the woodcarvers to the Society.

In the colonies we have to notice Mr. Slater's designs for Labuan Cathedral, and for a small church at Sarawak. Mr. Hamilton has designed a church for the English residents at Stockholm. One at Genoa is also in contemplation. From Sydney we hear of the steady progress of the cathedral. All the painted windows, which will form a complete iconographical series, are in hand by Messrs. Hardman. One of them, representing the life of St. Andrew, to be placed in the north transept, and to be made by Messrs. Hardman, is presented by Mr. Kemp, our honorary member.

Our notices of Foreign Ecclesiology are this year unfortunately scanty. The completion of the west façade of Santa Croce, at Florence, must be recorded: as also the negative result of the competition for a west façade to the Duomo, for which Mr. Burges sent a design. The works at Notre Dame, Paris, by M. Viollet Le Duc, are not yet completed. We hear with regret that the scrapings and restorations of the churches at Caen have been most destructive; and the same complaint reaches us from Belgium as to the proceedings of the Royal Commission in that country. The works at Cologne Cathedral proceed steadily under the care of M. Voigtel, M. Zwirner's successor. M. Statz has designed a (Roman Catholic) church for Potsdam, and has restored the abbey church of München-Gladbach, in Rhenish Prussia.

The restoration of the Papal Palace at Avignon, by M. Viollet Le Duc, is immediately to be commenced. M. Abadie is busily engaged in the demolition and reconstruction of the domes of S. Front, Perigueux. At Nismes a costly church, dedicated to St. Perpetua, is almost ready for consecration.

Religious painting at home must be represented this year by the completion, by Mr. Preedy, of the mural paintings as designed by Mr. Le Strange for the east end of St. Alban's, Holborn; also by a triptych, executed by Mr. Westlake for Messrs. Lavers & Barraud, for St. Mary's, Aberdeen; and by a 'Majesty,' by Mr. Smallfield, placed at the back of the recessed tomb, already referred to in St. Andrew's, Wells-street. Abroad we hear in particular of the painted decorations of a church at Alby; and our honorary member, M. Guffens, of Antwerp, has painted a fine altar-piece for Notre Dame St. Nicholas, in Eastern Flanders."

The subject fixed for discussion was the Basilican arrangement of Churches.

PRIZES FOR WOOD CARVING: SOCIETY OF ARTS.

THE following are the awards of the judges:—

First Division: Human Figure in Alto or Bas Relief.—First prize of 8*l.* and the society's silver medal, *not awarded.*

Second prize of 4*l.* to James Meiklejohn, 29, William-street, Regent's-park, for "Apollo Playing to the Shepherds," alto relief, in oak.

Third prize of 3*l.* to G. Rumford, 9, Ecclestone-street, for "The Rose Bud," a child's head in lime-tree.

Second Division: Animal or Still Life.—First prize of 8*l.* to Mark Rogers, 111, Tachbrook-street, Pimlico, for a panel, in walnut wood, of dead game, in a wreath of oak, blackberry, fern, &c., intended for the decoration of dining-room, sideboard, or chimneypiece,—modelled and carved by him.

Second prize of 4*l.* to be divided between — Green and Charles Humphriss, with honourable mention to T. H. Kendall, their employer, for "Life and Death," modelled by T. H. Kendall; executed by T. H. Kendall, — Green, and Charles Humphriss.

Third prize of 3*l.*, to W. Perry, 5, North Audley-street, Grosvenor-square, for the "Willow Wren" (property of Miss Burdett Coutts), "Robin in the Oak" (box wood), "Thrush" (lime-tree), "Nightingale and Hawthorn," "Sedge Warblers and Dragon-fly" (property of W. M. Coulthurst, Esq.).

Third Division: Natural Foliage, Fruit, or Flowers, or Conventional Ornament in which grotesque figures or animals may form accessories, preference being given where the work is of an applied character for ordinary decorative purposes, as representing commercial value:—

First prize of 8*l.*, to T. H. Baylis, 69, Judd-street, Brunswick-square, for his "Casket in box-wood,"

Second prize of 4*l.*, to T. H. Kendall, of Warwick, for "Paper-knife, stiletto, and Christmas box."

Third prize of 3*l.*, to R. Flipping, for "The fish and shell panels," portions of sideboard exhibited by Messrs. Gillow & Co.

Two extra prizes are awarded by the Society of Arts, of 2*l.* each, to J. M. Leach, of Louth, Lincolnshire, for a panel for the pilaster of a cabinet, designed and executed by him; and to C. J. Herly, of 2, Camden-place, South-street, Taunton, for a door panel, designed and executed by him.

THE GUILDHALL LIBRARY.

THOSE who, in years gone by,—say from fifteen to twenty years since,—visited this valuable collection, were generally struck with the quiet and somewhat monastic air of the place in the centre of the great and bustling city. No hermit in his cell in distant parts, in the times of old, could be much more secluded than the worthy librarian was, from morning till night, for many days throughout the year, notwithstanding there was here to be found information in connexion with the history of the metropolis, with other important matters which could not be elsewhere obtained. Now, however, the aspect of this library is much changed, and it is pleasant to see the considerable company which invades this once solitary place. Of late years there has been a more enlightened arrangement here than formerly. Besides books of antiquarian and historical interest, there have been introduced works of standard and general importance and value, magazines and other periodicals; and now those who can obtain permission (and this we believe is readily given to respectable persons by common-councilmen and other City authorities), may take the books home to be read. We may see stalwart and substantial citizens with their railway-bags, and younger men on their way to or from their offices, getting changes of volumes; and the number of readers in the rooms is also largely increased: many besides come to see the curiosities,—most of them found on the site of the Royal Exchange,—which have been collected here. There seems to be a desire on the part of the managers of the library to extend its usefulness and make it a notable City institution; but to the great masses of the population within the London corporation limits this library is not likely to be ever available to any great extent.

For the credit of London city, it is really essential that the citizens should move with the spirit and intelligence of the age; and that they should not allow the library any longer to be eclipsed, as it now is, by such splendid institutions as the Free Library at Manchester, and the Free Libraries and Mechanics' Institutes of other large towns. Instead of setting an example to other places—to those great districts which have grown in all directions around the City, and to provincial towns—the city of London has been slow to move in any matter which has had for its object the spread of general knowledge.

It is now some time since an unsuccessful attempt was made to open a Free Library in the City. Ideas have improved even since that time; and we should like well to see some of those able and liberal-minded citizens who made the attempt before, now endeavour to reinforce their strength as much as possible, and *try again.* We believe that on the last occasion, if but a moiety of those who had a voice in the matter had attended the meeting in the Guildhall, the ill-judged opposition would have been defeated; and the motion for the formation of a Free Library would have been carried by a large majority.

The sum for the support of such an institution as this would be so trifling a poundage upon the rateable property of the City, and so much good would arise from such a library, that it is discreditable, if not worse, to allow the matter to remain longer undone.

DWELLINGS FOR THE POOR: THE MONEY QUESTION.

I HAVE not heard that Mr. Peabody's gift to the poor of London has stimulated other men to follow his example for their benefit. Mr. Alderman Waterlow was at work for them long before Mr. Peabody came to their assistance; and what was done for them by gentlemen at the Mansion House on the 6th inst., seemed to be in consequence of the Alderman's success as a builder for the higher class of workmen. As is well known, this gentleman has erected a block of buildings in Mark-street, Finsbury; and on his outlay for these

buildings, he expects to get 8 or 9 per cent. It seems that he has lately signed a contract for three more such blocks, and expects from them similar interest results. Lord Stanley presided at the Mansion House meeting; and, on the experience and statements of Alderman Waterlow, he and his coadjutors are confident that they can erect blocks of buildings for the accommodation of 400 families (say 2,000 persons), for 50,000*l.*, on which outlay they expect to get a clear interest of 6 per cent. Their rents are to range from 7s. 6d. to 8s. a-week. Lord Stanley truthfully said that the lower classes of labourers could not pay a rent of 5s. a-week; and to this he added, "*what could be done for them was a problem requiring solution*, but which the meeting did not then undertake to solve."

My real business in this letter requires me to note the way in which Alderman Waterlow prepared his ground for his first block of buildings. A party of public men convivially opened them on the 14th of last March; and on the 16th the *Times*, the *Daily News*, and other papers, reported this event. The *Times* said that to prepare his ground for them the Alderman had to "demolish a lot of wretched dwellings which encumbered it;" and the *Daily News*, in a leader, said that "thirty or forty houses—wretched houses it may be—have, we believe, been pulled down, and sixty or eighty families have been sent adrift to find what homes they can in the already overcrowded courts and alleys of the neighbourhood. Others are waiting in fear and trembling for their turn to be driven out; and they look upon the model dwellings with anything but friendly feelings." Further on, well warmed to his subject, the editor said, "We hope that no dwelling, however wretched, will be pulled down without another which can be let at the same rental being erected in its place." Were this done it would considerably alter the Alderman's interests and calculations, I think. Nevertheless, I must express my regret that when Lord Derby framed his Bill to compel railway authorities to build as they destroyed, he was not prescient of the Alderman's building intentions; for surely, had he been so advised, he would, by a special clause in his Bill, or that legislation being questionable, by such an appeal to the Alderman's convictions of duty to poor labourers as would have saved them from the suffering described.

My purpose is to deal with Lord Stanley's suggested but put aside problem; but before I touch it let me say, once for all, that it is a fearful thing for such men as our higher class workmen to be compelled to occupy such dwellings as they generally do; and that the sooner they have fair opportunity to move into houses befitting their growing intelligence and respectability the better for themselves and all the interests which connect them with this world and the next.

Lord Stanley neglects a problem which I, in common with you, Sir, and many other men, have been upon for long years. The difficult point in it is the money question; for it has been said by Royal and other eminent men, that unless 7 or 8 per cent. can be realized on such investments men will not touch them. This is said now; and is the saying a mere echo or a prostrating truth? This question leads to another: Are all men, *on all occasions*, come to such a pass on interest questions that nothing short of 6 or 8 per cent. will satisfy them on their investments? Why, for ages, and year by year up to this time, millions of money have been invested in landed and funded securities without a chance of getting interest as high as 5 per cent. The workable acreage of this kingdom does not give the owners of it 5 per cent.,—the greater portion of it much less; yet men will have it on such terms, as all men of the world well know. In this place it is not necessary for me to say why men will so invest year by year millions of money: it is quite enough for me to say that they do; and that it is done on considerations satisfactory to their own impulses and judgments in the disposal of their money. I cannot close this paragraph without noting a singular trait in men,—not, I think, so much in their characters as in their habits. A man shall be found determined to be the owner of a great estate at any price;—largely indifferent on the question of his income for his capital in his rents. But no sooner is he in the possession of the estate than he shall be found keenly huckstering over the price of half-a-score of cottages for his labourers. This is a curious trait in habits; and, on my experience and observation, I must believe it too general among all classes of wealthy men. They purchase and build for themselves with a certain recklessness; but, when it comes to the question of housing their dependents, they are too often Mammonists;—will show that they know the value of a pound as well as their neighbours.

Between ourselves, my belief is that the Devil has an insidious hand in the matter: he is very active in apparent trifles, which, nevertheless, are connected with awful moral consequences; and it will be well for mankind to escape from such Satanic thraldom in habit with as little delay as possible.

But to come nearer my proper purpose in this letter, and through a matter for which motive may be declared. We have here, in London, thousands of men who year by year give—not invest—large sums of money to sustain societies and missions occupied with the interests of mankind in this world, and that to which we all hasten. I emphatically say that this is done on no mere philanthropic impulses. It is the result of personal resolution. They are personally grateful to the Giver of all good things; and what they do in the ways here indicated is done on conviction of personal duty to GOD and their fellow men. In a word, what they do in all such cases is done on the movings of exalted principle within them; and, in another word, when we can excite some principle in men (I shall not stop to canvass its quality) which shall dominate considerations of interest, on trifling investments for dwellings for the poor, we shall be close to a practical solution of our problem.

At the Mansion House, the other day, Mr. Alderman Finnis (all honour to him) appealed for such dominating principle when he asserted that "as masters and employers they were doing great injustice to the poor by pulling down their dwellings without providing others." Possibly Alderman Finnis alluded to the late destruction of houses by his brother alderman; or he might have darkly hinted at a similar destruction by the gentlemen around him. With that I have nothing to do in this place. My business is to direct attention to the tens of thousands of loathsome sin-creating dwellings to be found all over London, and to ask, Is it not a crying "injustice" to allow responsible human beings to tenant them? Then the principle which compels such declaration will be to such men the principle which shall also compel them to spurn away from their thoughts considerations of high interest for such money as they may hereafter invest to give such fearfully miserable occupants better dwellings. If happily this stirring principle shall be found within many men, then our important problem will be nobly solved.

And for the practical solving of it what trifling investments men will have to make when they set about the matter in earnest—what paltry sacrifices of interest! On the 27th of last December Mr. Taylor read a paper before the Society of Arts on "Cottage Buildings and Sanitary Appliances;" and, in the discussion which followed the reading of it, Mr. C. Asprey declared himself ready to give 100*l.*, or invest it to carry low interest, in furtherance of the matter. Very well; and in honour of the offer I will, for my present illustrative purpose, limit my calculation to 100*l.* investments. Now, in our London commercial directories there are, I believe, over 100,000 trading firms, and in the "Court Directory" over 12,000 names. Directly and indirectly all those persons employ, or are importantly ministered to by, the London labourers and workmen; and were it possible to rouse each of them to the investment of 100*l.* for the purposes of this letter, then over 11,000,000*l.* would be obtained. I may say that, as a result of much careful inquiry and calculation, good use could be made of even this enormous sum for our building purposes. I am no wild enthusiast in the matter of getting money together for public purposes. I have lived too long, and know the world too well, to let enthusiasm override my judgment in such calculations and expectations; but this I will fearlessly say, as a result of inquiry, that should any man roundly and publicly assert, that all our Directory men are so indifferent to the injustice indicated by Alderman Finnis as to be hopelessly deaf to all such investment appeals, come from whom they may presently, that thousands of them would, on the instant, prove his mistake by action in the matter.

P.

LIGHT AND AIR CASE.

Phillips v. *Willraham*.—This was a motion (in the Vice-Chancellor's Court) to commit the defendant to prison for breach of an injunction, restraining him from erecting any building, on the site of a house which formerly belonged to him, in Carey-street, Lincoln's-inn-fields, in such a manner as to interfere with the access of light and air to certain chambers belonging to the plaintiff. The plaintiff is the owner in fee simple of a set of chambers, situate on the ground-floor, and in the area of No. 7, New-square, Lincoln's-inn. One of the windows of the chambers on the ground-floor looks out on a small yard belonging to the chambers; and the plaintiff now complained that the defendant had so constructed the new house which he had built upon the site of the old one, as to obstruct the admission of light and air to the chambers on the ground-floor. Since the injunction was granted the plaintiff had on a former occasion moved to commit the defendant for a breach of it; but as the defendant, before that motion came on, commenced pulling down the obstruction complained of, the motion was withdrawn on the defendant paying the cost of it. This, then, was the second breach of the injunction complained of by the plaintiff.

The Vice-Chancellor said that the defendant admitted that he had raised the roof which rose from the wall opposite to the window of the plaintiff's chambers one foot, and the evidence showed that he had also raised the wall on the outside of the yard. By the way in which the defendant had rebuilt his house access of light and air to the plaintiff's chambers was impeded; and as this was the second breach of the injunction by the defendant, there must be an order for his committal, and he must pay the costs of this motion.

RIGHTS OF YEARLY TENANTS TO WINDOWS.

IN *Jacomb* v. *Knight*, it was decided that a common tenant from year to year was entitled to an injunction to restrain the tenant of an adjoining house, *belonging to the same landlord*, from obstructing windows, although such windows had not been enjoyed for twenty years. The ground of the decision was that, inasmuch as the landlord himself could not have derogated from his own grant by stopping the windows, any tenant claiming under him must be in the same position. Also, that although the tenancy of the plaintiff was created by word of mouth, it gave to the plaintiff the same rights of light as if it had been by a formal document; and that, notwithstanding as soon as the bill was filed the landlord gave the plaintiff notice to quit; that did not take away his right, but only affected the amount of damages to which the plaintiff was entitled.

WATER! WATER! WATER!

IN reference to the communication of your correspondent "*Bis dat qui cito dat*," if all who want *water* wrote to you, I should say that the mere catalogue of the names of the writers would suffice to fill one *Builder*, though in a "dry" way to all readers.

I occupy a house in this richly-stuccoed neighbourhood, called by the vulgar "Pimlico," but in refined language named "*South* Belgravia." There are *four* persons in the house, and we are often "*quite dry*" on Sunday evening, and through the greater part of Monday. Even to the time I am writing this, 4·30 p.m., there has been *no* welcome sound of water coming in. Certainly I think that, considering I pay the Water Company three pounds (3*l.*) per annum, I should not be left without that useful article for one-seventh of my time.

However, my object in addressing you is, *not* to grumble about my individual wrongs, but to suggest what I consider a simple remedy for the "dry" condition of so many Londoners. It is this; viz., that the water companies should have the supply turned on *late* on Saturdays and *early* on Mondays, instead of as now *rather earlier* on Saturdays and *later* on Mondays than during the other days of the week.

We may congratulate ourselves on the recent defeat of Mr. Somes's Beer Bill. What a state we should have been in, if the Legislature had "cut off" the beer on the very day upon which the water is "cut off!"

Pray do, for a short season, turn your attention to the turncocks. It is with great confidence that I ask you to do so; as, being a constant reader of your periodical, I know full well that you very strongly hold the opinion that to be without water is as unhealthy as it is uncomfortable.

A DRY ONE.

Miscellanea.

ARTIFICIAL SLATE.—An artificial Slate, for use in schools, &c., is spoken of as invented by a Mr. J. N. Pierce. Almost any material, it is said, may be coated with this slate as with a wash, and then written or drawn on. The wash may be put on paper or linen, which may be rolled up.

DESTRUCTION OF WELBECK ABBEY TOWER.—For some time past workmen have been employed in altering Welbeck Abbey, Notts, the seat of the Duke of Portland, and a storm lately visited that place, and a thunderbolt descended upon the tower, striking it with such force that the four-dial tower clock was completely demolished and old Welbeck's tower split down, the report of the thunder and the fall of the old pile causing great alarm among the workpeople.

A NEW RAILWAY DANGER.—The *Smyrna Mail* of June 2nd contains the following:—We continue to receive alarming accounts of the ravages committed by the locusts. The swarms have in many cases lodged on the Ottoman Railway, and compelled the engine-drivers to proceed with great precaution. The locusts, on being crushed with the engine on the rails, make them excessively greasy and slippery, so that the wheels will scarcely bite. Sand has been dropped on the rails to give the wheels a hold.

DISCOVERY AT COMBE ABBEY (COVENTRY).—The workmen employed in the restoration and rebuilding of this structure, the seat of Earl Craven, while engaged in taking up the floors of the east cloisters of the Abbey, preparatory to the re-erection of that wing, made the discovery of eight stone coffins, with bones, and also a lead coffin, which were in a perfect state of preservation. It is supposed that they belonged to monks connected with the old abbey. It is intended to re-inter the coffins and bones in the new chapel about to be built in the abbey.

DAMAGES AGAINST RAILWAY FURNACES.—A case has been tried in the Jury Court, Edinburgh, before Lord Barcaple, in which Messrs. Cooper & Wood, bottle-manufacturers, Portobello, claimed 1,000*l.* damages against the North British Railway Company, for injury sustained by the house and grounds of Baileyfield, Portobello (of which the pursuers are proprietors), from smoke, dust, and gases discharged from the defenders' works for converting and hardening iron rails. A large number of scientific witnesses, including chemists, medical practitioners, architects, and horticulturists, were examined on both sides. The evidence was to a great extent conflicting, but it seemed to be proved that the vegetation had, since the erection of the furnaces, been considerably injured, and that the comfort of the occupation had been interfered with. The jury were divided in opinion, but by a majority of nine to three they found for the pursuers, with 200*l.* damages.

THE HAMBURG INTERNATIONAL EXHIBITION.—The example of England in establishing the noble precedent of International Exhibitions, after finding imitators in the United States, France, and elsewhere, has at last aroused the emulation of the phlegmatic Germans. The free city of Hamburg will next month be the scene of an "International Agricultural Exhibition," to commence on Tuesday, the 14th, and continue one week. The Exhibition Committee have entered into negotiations with various steamship and railway companies, to obtain reduced tariffs on freight for contributions from numerous points on the Continent. The most important agricultural societies of all countries, including our own Royal Agricultural Society, have promised to give all the aid and support in their power. The proposed Exhibition will be held on the "Heiligengeistfeld," or "Field of the Holy Spirit," just outside of the city of Hamburg.

ELECTRIC STEERING APPARATUS.—The increase in the size of the ships of the royal navy, as well as of those in the mercantile marine, has rendered necessary many important changes and improvements in the construction and working of these vessels. In respect to steering, electricity is at present regarded as the only means of ensuring rapidity and accuracy. A new plan has just been tested, it is said successfully, on the trial trip of the *Royal Oak*. The apparatus is the invention of Mr. Gisborne, C.E. The communication between the captain and the helmsman and engineer is maintained by means of a coil of conducting wires. The wires are covered, by Messrs. Silver's process, with a thin coating of indiarubber, not thicker than the finest film of silk, but protected by tarred hempen cable. The motive power is a small galvanic battery, which, when charged, will remain permanently in action for twelve months. On the paddlebox, bridge, forecastle, or any other place convenient for the captain, there is fixed a circular dial-plate with a handle or knob fixed to the revolving arm, and upon the rim of the dial the words "port," "steady," "starboard," "hard." A small box is placed before the helmsman, upon the face of which are metal flaps corresponding in number and covering the orders that may be transmitted by the apparatus. For the engineer the arrangement is of a similar character, the words on the dial-plate being "stop," "ahead slow," "half speed," "full speed," "back half speed," "back full speed," and so on. To insure accuracy, the helmsman or engineer sends back a signal to the captain; and every order transmitted is registered, and remains permanently in sight until another order is sent.

PROGRESS OF WESTERN IDEAS IN THE EAST. The Emperor of China, wishing to show some distinction to the foreigners who helped him in the hour of need against his rebel subjects, has had some gold and silver medals struck, not unlike the Crimean and Italian medals.

POST-OFFICE SAVINGS BANKS.—A Parliamentary return states that there are now 1,882 Post-office Savings Banks in England, 140 in Wales, 345 in Scotland, 286 in Ireland, and 10 in the Islands. There is a total of 360,320 depositors in these banks, who have deposited 2,755,052*l.*, and have withdrawn 640,030*l.* up to the 31st day of March, 1863.

WESTMINSTER PALACE.—Sir M. Peto asked the First Commissioner of Works whether any contract had been entered into with Mr. Szerelmey to arrest the decay of the stone of the New Palace of Westminster; and if so, under what advice the First Commissioner acted in entering into such further contract with Mr. Szerelmey pending the report of the commission which recommended that nothing further be done in the use of the process of Mr. Szerelmey. Mr. Cowper said that no contract was now pending. A contract had been entered into in 1860, but no works were proceeded with under it, and it was not now in force.

AWARD OF PRIZES TO THE SWEDISH AND NORWEGIAN INTERNATIONAL EXHIBITORS.—The distribution of the prizes awarded to the Swedish and Norwegian exhibitors at the International Exhibition of 1863, took place on the 3rd of May, in the Grand Hall of the Bourse. The king deputed his brother, Prince Oscar, to present the prizes to the successful candidates. According to the *Social Science Review*, the prince urged upon the assembly the necessity of their efforts in aid of the success of every Exhibition, but more especially of the Scandinavian Exhibition proposed to be held at Stockholm, and almost unanimously agreed to by the Society of Arts and Manufactures of Sweden. He afterwards presented the prizes to the successful candidates, and also some Swedish decorations from the king to the sculptor Molin and the artist Berg.

WALKING ON DEEP WATER.—Some interesting experiments have been performed on the ornamental water in the Crystal Palace grounds, to test the power of a man to walk through water in an upright position. A number of scientific persons assembled to witness the proceedings. The man who was to operate had on one of Stewart's patent floats, which consists of two air-tight vessels, one fitted under the chest and the other down the back, and communicating with each other by a tube. These being worn under the ordinary clothes were not visible to the public. Having satisfied the company of the perfect buoyancy of the float, he next proceeded to put on a pair of Stewart's propellers. These are a kind of small paddle to fix on each heel, and so arranged that when the foot moves forward it cuts through the water edgewise, but as soon as it is subjected to a lateral pressure the paddle shifts, so as to offer a broad flat surface of resistance to the water. This simple arrangement enabled the man to walk about much the same as if he were on land.

ACCIDENTS.—Part of the old quay at Maryport, nearly opposite the Custom House, has fallen suddenly into the harbour, owing, it is said, to rain which had fallen.——While a steam traction-engine, weighing 11 tons, was driven across the suspension-bridge at Earith, in Hunts, two of the cast-iron girders supporting the roadway snapped with a loud report. The planking and timber-work of the floor were fortunately strong enough to hang up the broken girders, while the engine pursued its journey safely across. Some timbers have been secured to the broken girders, by direction of the Isle of Ely surveyor, so as to make the bridge temporarily passable for loads of moderate weight.——The coffer-dam which covered the mouth of the Great Low-water Basin at Birkenhead has given way. The gap is through the centre of the dam, and forms an opening of about 100 feet in width, or one-third of the distance across. All the work within the basin was finished, and ready for the admission of the water, with the exception of a small portion of the excavations immediately within the dam. The rush of water, besides breaking and driving in the material forming the dam, swept away some temporary shores and staging alongside the walls of the basin. No damage whatever was done to the masonry, the gates, the sluices, or any of the permanent work of the low-water basin. The rush of water has deepened the basin 9 feet, it is said; but where the material has gone to does not appear.

REGENT'S PARK. — The flower garden in Regent's Park has been opened to the public. It is situate on the west side of the long walk near the Colosseum. Several stone vases are interspersed in different parts of the garden, and contrast with the flowers, now in full bloom. The Gothic drinking fountain, given by Mrs. Gurney, is also a convenience to the frequenters of the park, as it is placed near Gloucester-gate.

BURLINGTON HOUSE AND THE NATIONAL GALLERY.—In reply to a question in the Commons last week, Mr. Cowper said that a scheme had been for a considerable time under the consideration of the Government for erecting a new National Gallery in the rear of Burlington House, leaving the existing National Gallery entirely in the hands of the Royal Academy; and until some decision had been arrived at on the part of the Government, he had thought it expedient that the ground at the back of Burlington House should be appropriated to the temporary use of the Volunteers, for the purposes of drill.

DISCOVERY OF A SAND-IMBEDDED TOWN IN FRANCE.—A singular discovery, it is said, has been made on the French coast, near the mouth of the Garonne. A town has been discovered buried in the sand, and a church has already been extracted from it. Its original plan shows it to have been built near the close of the Roman empire. The original paintings, its sculptured choir and capitals, are adorned with profuse ornaments, which are attracting a large number of visitors. This is all that remains of those cities described by Pliny and Strabo, although the Gulf of Gascony abounds in ruins of ancient cities.

THE CHURCH OF ENGLAND ON THE CONTINENT.—The church of Creuznach, near Bingen, on the Rhine, has been formally opened for the service of the Church of England. The burgomaster, town authorities, church committee, German pastors, and the English clergy present, entered the building in procession. The choir of an old German church, which had become a ruin during the Thirty Years' War, having been given in 1856 by the authorities to the English community, has now been thoroughly repaired, chiefly at the expense of Mr. H. Moor, of Brighton, as announced in *Galignani's Messenger*. The stone-work of the ancient windows has been restored, and stained glass placed in various situations.

WALL DECORATIONS, HORSHAM, SUSSEX.—The chancel of St. Mark's Church has been decorated throughout in a polychromatic arrangement by Messrs. Harland & Fisher, of London. The ceiling is studded with gold stars in the panels, and the intersecting ribs picked out in bright colours. The jambs of the window — a three-light lancet — have a trailing pattern of passion-flower all round them, upon an alternately banded ground of light blue and buff. The walls, as far as the springing of the window arches, are treated chiefly in diaper work of murray colour and chocolate in various arrangements, and from this point to the roof spring vine foliage and fruit in chocolate and buff. A cornice on either side is coloured to correspond with the ribs on the roof, with the emblems of our Lord's passion corbelled out beneath it. The salient points and architectural features are all emphasised with bright colours and gold, which is but sparingly used in other parts. The chancel arch itself is decorated in tints of cold grey, to serve as a framework.

WOOD SAWING MACHINERY. — Messrs. Easton & Amos, of the Grove, Southwark, have just obtained a patent for an invention of improved machinery for sawing wood. In order to secure the log from rising with the drag of the saw on its bed while being cut, the patentees keep it down by means of pressing rollers or bowles carried by vertical water cylinders, in which stationary pistons are inserted, their rods being pendant from a transverse beam of the saw-frame. The upper and lower ends of each cylinder are brought into communication by an outside pipe, which allows of the water which fills the cylinder to pass from one to the other side of the fixed pistons. The water forms an elastic packing between the piston and the lower ends of the cylinder, and serves to retain the bowles of the cylinders in contact with the timber when once lowered in contact therewith. As this machine would be required to operate upon baulks or logs of varying thickness, the cylinders are fitted with a vertical rack in gear with pinions for raising and lowering the cylinders: by this means the position of the cylinders may be adjusted to suit varying sizes of timber. The *Mechanics' Magazine* of June 19th, by aid of diagrams, describes various other peculiarities and advantages of this machinery.

THE PRINCESS'S THEATRE.—Mr. Walter Montgomery, put forward and kept back by Mr. Fechter for many months, made a satisfactory first appearance last week at the Princess's, in "Othello," having transferred his services without leave. He showed himself to be greater as an elocutionist, perhaps, than as an actor, but was not wanting on some of the occasions demanding the exhibition of continuous passion. We desire to see more of him. Mr. Marston's *Iago* was an admirable piece of acting.

NEW SCHEME FOR A LONDON AND PARIS HOTEL.—A limited company is being got up for the establishment of a "through system" of hotel accommodation between London, Paris, and elsewhere, with couriers for travelling customers. It is proposed to purchase Meurice's Hotel in Paris, and first-class hotels in Boulogne and Folkestone, and also Crockford's club house and adjoining property on which to erect a new hotel. The capital of the company will be 400,000*l.*, in 20,000 shares of 20*l.* each. Temporary offices have been opened at No. 53, St. James's-street, S.W., and elsewhere.

HALIFAX SCHOOL OF ART.—The fifth annual examination has just taken place. A greater number of medals has been awarded this year than on any previous occasion; and besides, the character of the works is higher than usual. Out of thirty-six works in competition nineteen medals had been awarded, whilst three others received "Honourable Mention." Eight of the successful medal works have been selected for national competition at South Kensington. The prizes offered by the local art patrons have stimulated the students. The number of medals taken this year is considerably above the average, as last year there were but fourteen. Considerable attention has been directed to the higher branches of study, and medals taken for design as applied to manufacture and architecture for the first time.

MONUMENTS TO GOETHE, SCHILLER, AND LESSING.—A dispute has been for some time going on at Berlin as to the question of precedence between Schiller and Goethe in the centre of Gensd'armen-markt and before the theatre. The foundation stone of the Schiller Monument had been laid precisely in the centre; but a Goethe Committee obtained permission to erect a Goethe Monument also, and they requested the Schiller committee to move their stone a little to one side so that neither Schiller nor Goethe should have the precedence. This the Schiller committee refused to do, and hence the *ideal* row. At last a happy thought occurred to some one that a Lessing committee should also be formed, and Lessing occupy a place as well as Goethe and Schiller, leaving Schiller in the centre. At first the Goethe committee assented; but at last they repented of their assent; and the question of precedence appears to be now as far from a settlement as ever. A paper war is still going on about this business.

GAS.—The beneficial consequences of a steady reduction of price to an extremely low standard were never more remarkably displayed than by the liberal and intelligent management adopted by the Plymouth Gas Company, whose successive boons to the public, which the public have as successively repaid by increased patronage, we have repeatedly had occasion to record. The price from Michaelmas next is to be 2s. 9d., as announced at the annual meeting recently held. The chairman in opening the meeting said he had no particular observations to make: he could only express his gratification by saying that the company was never in a more prosperous state; the proceedings of the company during the past year having exceeded their most sanguine expectations. The report was read and adopted: the directors were re-elected; and it was decided that 10s. be paid on the original shares; 7s. 6d. on the additional shares; and 2s. 3d. on the new additional shares; commencing on the 1st of January. While gas is cheaper in Plymouth than in Newcastle itself, the shares are doubled in value. When the Bill for the "additional shares" was proposed, the directors met with great opposition, and a rival company was threatened, although the price of gas in Plymouth was then much lower than in other towns. The company was, therefore, under the necessity of limiting the dividends on those shares to 7½ per cent. The liberality, however, always shown by the company to the town should now be acknowledged by an amended Bill to equalize the limit of the dividends of these "additionals" with that of the original shares, and we are sure the town would be benefited in the end. Even now the public lights (which are contracted for at a higher price) are to be reduced to 2s. 6d. per light. Such a company deserves encouragement.

ORNAMENTAL SCULPTORS' SOCIETY.—The designs for caps sent in reply to advertisement in our columns are to be seen at the rooms of this society, 9, Holywell-street, Westminster.

UNDERGROUND STREAMS: POLLUTION.—The Court of Queen's Bench has just decided, in a sharply-contested case, that a right of action lies by the owner of a stream against any person who by mining operations or otherwise causes a pollution of the waters of the stream, even although the polluting matter has to travel for a distance of two miles, and reaches the stream by an unknown and subterranean channel.—*Hodgkinson* v. *Ennor*.

CHAPEL, THETFORD UNION HOUSE.—On Thursday, the 11th, the first stone of a chapel for the use of the inmates of the Thetford Union House, was laid by Lady Walsingham. The building, which is of the simplest Gothic style, will accommodate 150 persons, and will supply a want which has been greatly felt. The contract for the mason's work has been taken by Mr. J. Palmer, of Thetford; that for the woodwork, by Mr. J. Scott, of West Tofts.

THE SHAKSPEARE FUND.—Mr. and Mrs. Charles Kean have consented to read this (Friday) evening, at St. James's Hall, passages and scenes from the plays of Shakspeare, in aid of the fund now being raised for the purpose of erecting a national memorial of the poet. The readings of these accomplished *artistes* in Dublin last year raised the utmost enthusiasm in the audience. The present is an opportunity to hear them which will not occur again for a long time to come.

NEW ORPHAN ASYLUM AT SLOUGH.—The building, which abuts on the Slough railway station, was formerly known as the Royal Hotel, and stands in spacious grounds; but to meet its future requirements very large additions have been made to the original, comprising a school-room and dining-hall, 74 feet in length, built on the south side, surrounded by a terrace, while an extra story has been raised for dormitories, &c. The entire building, as converted, is in the Italian style, from the designs of Mr. T. M. Nelson, architect. The interior has also been renovated and improved; the baths, lavatories, and nearly the whole of the rooms fitted with patent warming apparatus, of Messrs. May, of Holborn; and the ventilation has also been attended to. The inauguration took place on Wednesday, the Prince and Princess of Wales presiding on the occasion. Professor Sterndale Bennett composed a cantata, which the ladies and gentlemen of the Royal Academy of Music performed. The route from Windsor to Slough was gaily decorated with flags and banners.

ERECTION OF A BRIDGE BY A "WORKING" COMMITTEE.—For a number of years past a committee has been in existence in Partick, near Glasgow, for the purpose of improving the old Church-road, which has from time immemorial crossed the Kelvin by stepping-stones. This committee was composed of gentlemen who could never agree as to how they should carry out the duties devolving upon them. Lately, however, a public meeting was held in Partick, at which the committee gave in their resignation, and at which another committee of *working* men was appointed. To the agreeable astonishment of the inhabitants the committee at once set about the purchase of iron, with which they made four substantial trusses, and then procured wood for the bridge. During two or three weeks the committee's spare hours had all been busily employed in preparing the timber; and on Saturday before last they proceeded, to the number of between 100 and 150, to the spot with all the materials, and *in two hours and a half*, according to the *Glasgow Mail*, completed a "substantial and commodious structure," bridging the Kelvin by a single span of 120 feet in length. The work was done in the presence of hundreds of spectators, two instrumental bands lending their charm of music to aid in the good work. The men engaged at the lower part of the bridge were obliged to work standing in two or three feet of water all the time.

TENDERS.

For the completion of villas at Selhurst Park:—

Simms	£988 0 0
Hollidge	865 0 0
Clerihew & Lascelles	840 0 0
King	795 0 0

THE *Standard*, Nov. 15, speaking of Benson's Watches in the Exhibition, says:—"It has evidently been Mr. Benson's object to render them rivals in point of beauty of decoration to the elegant Swiss knicknacks, and at the same time to preserve the characteristics of an English watch—strength, durability, and accuracy. In point of decoration his watches are certainly unsurpassed." Chronometer, duplex, lever, horizontal, repeaters, centre seconds, keyless, split seconds, and every description of watch, adapted to all climates. Benson's Illustrated Pamphlet on watches (free by post for two stamps) contains a short history of watchmaking, with descriptions and prices. It acts as a guide in the purchase of a watch, and enables those who live in Scotland, Ireland, Wales, the Colonies, India, or any part of the world, to select a watch, and have it sent free and safe by post.—J. W. BENSON, Prize Medallist, 33 and 34, Ludgate-hill, London. Established 1749.—[Advt.]

ADVERTISEMENTS.

KEMP & CO. will Remove and SELL by AUCTION in the Large Room at the YORKSHIRE GREY, High street, Stratford, near the Gate on THURSDAY next, JUNE, without any reserve, 12,000 pieces of PAPERHANGINGS, in various designs, and 200 lots of Builders' Ironmongery, suitable to builders, parties repairing, and others. View morning of sale, and Catalogues at Place of Sale, and Auction Offices, 27, Coleman-street, Bank.

MR. J. H. LEONARD,
ARCHITECTURAL DRAUGHTSMAN, ARTISTIC COLORIST, AND LITHOGRAPHER.
Removed from 21, Montague-street, Russell square, to 78, TORRINGTON-SQUARE, W.C.

E. MILNES, Architect, 30, Hall Ings, Bradford, is in immediate WANT of a first class ASSISTANT.

BANSTEAD and EPSOM DOWNS RAILWAY.—WANTED, 500 NAVVIES and 50 BRICKLAYERS on the above line.—Apply to the FOREMAN, on the Works; or at Mr. GARRETT'S Offices, 19, Great George-street, Westminster.

LATH-RENDERS WANTED.—Address, 20, Woodland-terrace, Newington-road, Ball's pond.

REQUIRED, in a Quantity Surveyor's Office, a steady, intelligent LAD, able to square dimensions and trace drawings, &c. Apply, stating terms, and in own handwriting, to R. L. C. 8, Union-court, Old Broad-street, E.C.

TO PLUMBERS.—The Trustees of Mrs. Ann Newton's Charity, for placing out every year One Boy (clerically to the parish of St. James Westminster, APPRENTICE to some respectable Trade, with a Premium of Thirty-one Pounds, will meet at the Vestry Hall, next St James's Church, Piccadilly, on FRIDAY, the 3rd of JULY next, at SIX o'clock in the Evening precisely, to receive APPLICATIONS for such Apprentice, aged 13 years, from persons carrying on the above mentioned Trade, for which the boy has expressed a preference. Any further information required may be obtained daily, between TEN and FOUR o'clock, at the Parochial Office, next the Workhouse, in Poland-street, Oxford-street, where the boy may be seen. Every Applicant for the Apprentice must attend the above meeting in person, and bring a card containing his name, address, and business, with two references as to character, &c. None but householders need apply.—By order of the Trustees,
GEORGE BUZZARD, Clerk.

TO ARCHITECTURAL DRAUGHTSMEN.
WANTED, a Thorough Man of Business, to act as ASSISTANT MANAGER. He must be a good draughtsman and designer, also a good correspondent, and accustomed to early business hours.—Apply, with specimens of drawing, to J. WEEKS, Horticultural Works, Gunter's-grove, Brompton

WANTED, a good SMITH and BELL-HANGER.—Apply to G. GILBERT, Ironmonger, Tunbridge Wells.

WANTED, a CLERK, by an extensive BUILDER and CONTRACTOR. He must be able to make plans, sections, and detail drawings, take out quantities, and measure up work. Applicants to state age, and salary required, with references as to character and ability.—Address, by letter, 359, Office of "The Daily Post," Birmingham.

WANTED, immediately, a PLUMBER and Two JOINERS. If satisfaction be given, the above trades will be permanent.—Address, G. W. care of Mr. W. Brackett, 2, 3, Parade, Tunbridge Wells.

WANTED, a FEW strong, active LADS, aged 16 to 17, to learn the art and trade of a MARBLE POLISHER, under agreement for four years. If from the country, preferred.—Apply, by letter, to Mr. PELTON, 1, Earl-street, Westminster.

WANTED, a PARTNER, in a good JOBBING BUSINESS. A Carpenter preferred, with a small capital.—Address, A. B. 11, Pilgrim-lane, Kennington, S.

WANTED, a CLERK of WORKS, of good practical knowledge, more especially in concreting and brickwork (but not necessarily a draughtsman). Terms two guineas per week. Distance, forty miles from London. Reference required. Apply to G. B. MUSSELWHITE, Architect, Basingstoke.

WANTED, on the Bushey Park Estate, Teddington, several good BRICKLAYERS, either to take brickwork by the rod, or daywork at London prices. Also some Bricklayers' Labourers, and a few Plasterers. None but steady good men need apply. Inquire at the Office on the Estate.

WANTED, immediately, TWO steady, competent WORKMEN, who thoroughly understand timbering and supporting ground, similar to a tunnel entrance. Quite useless for others to reply. State age and other particulars.—Address, AGENT, care of Station Master, Jarrow-on-Tyne, Gateshead.

WANTED, a few good BRICKLAYERS. Address, in the first place, T. U. Office of "The Builder."

TO ARCHITECTS AND SURVEYORS' CLERKS.
WANTED, an experienced CLERK, who can make drawings, take out quantities, write specifications, &c. None need apply who are not thoroughly practical and energetic.—Address, in own handwriting, stating where last engaged, age, &c. W. B. care of Mr. Herbert, 88, Cheapside, E.C.

WANTED, immediately, in a BUILDER'S OFFICE, a respectable YOUTH acquainted with the Business. Address, in own handwriting, stating salary required, age, and where last employed, to B. E. N 80, Prince's-street, Lambeth, S.

TO ARCHITECTURAL DRAUGHTSMEN.
WANTED, a GENTLEMAN, thoroughly competent to get up competition drawings; must be able to put perspective views in pencil—colouring, although desirable, not requisite. Apply to Mr. JOHNSON, Architect, 26, King William-street, Strand.

TO ARCHITECTS.
WANTED, an ENGAGEMENT, by an efficient Assistant, who has a thorough knowledge of Gothic architecture, and is accustomed to design and prepare working and detail drawings, &c. from rough sketches.—Address, E. B. L. Office of "The Builder."

TO NOBLEMEN AND GENTLEMEN HAVING ESTATES.
WANTED, by a Young Man, a CONSTANCY, as PAPERHANGER, PAINTER, and GLAZIER. Can turn his hand to plumbing if required. Wages, 24s. per week.—Address T. L. at Mr. Burgess's, Wheathampstead, Hertfordshire.

TO ARCHITECTS.
WANTED, a SITUATION as CLERK of WORKS. Has a thorough and practical knowledge of the building trade.—Address, J. A. Z. Office of "The Builder."

TO BUILDERS AND OTHERS.
WANTED, by an experienced Young Man, a carpenter and joiner by trade, a SITUATION as an OUTDOOR FOREMAN.—Address, H. E. Office of "The Builder."

WANTED, by a Young Man, aged 23, a Constant SITUATION as WRITER and GRAINER. Would fill up his time at plain painting. Wages moderate. No objection to be country.—Address, DELTA, Office of "The Builder."

TO ARCHITECTS, ENGINEERS, AND BUILDERS.
WANTED, by a thoroughly practical and efficient CLERK of WORKS, of more than ordinary experience in first-class works, a RE-ENGAGEMENT. Testimonials of the highest order.—Address, Mr. J. BARKER, Harefield, Uxbridge.

Sixteen years' experience. First class references. Terms, 2l. 2s. per week.—Address, R. E. Post-office, 32, Grange-road, Bermondsey.

TO ARCHITECTS.
WANTED, Evening or Occasional EMPLOYMENT, by an Artistic and Practical DRAUGHTSMAN. Eighteen years in the profession. Terms moderate.—Address, PIRANESI, Office of "The Builder."

TO ARCHITECTS.
REQUIRED, by an ASSISTANT, an ENGAGEMENT in an Architect's Office. Terms moderate.—Address, B. F. 15, Anderson-street, Chelsea, S.W.

TO ARCHITECTS, &c.
JUNIOR ASSISTANT.—The Advertiser, aged 21 (five years' experience), wishes for an ENGAGEMENT as above. Is quick and careful at his work, and understands fully the routine of an architect's office. No objection to a builder's office. Moderate salary.—Address, W. 41, Museum-street, W.C.

TO ARCHITECTS.
A SURVEYOR, of good position, will be glad to TREAT with Architects for taking out quantities, measurement of works, writing specifications, or advising and assisting in the execution of constructive details and drawings generally.—Address, EDWARDS, Post-office, 9, High Holborn.

TO BUILDERS AND DECORATORS, &c.

AS WALKING or WORKING FOREMAN of PAINTERS, &c. Every way qualified. References to eminent builders in London. Wages very moderate.—Address, H. J. 184, High Holborn, W.C.

A THOROUGHLY PRACTICAL CLERK of WORKS who has just completed some extensive works, is desirous of a RE-ENGAGEMENT.—Address, J. H. T. Office of "The Builder."

AN ASSISTANT, thoroughly up in Gothic design and detail, a good and rapid draughtsman, well acquainted with office work generally, and qualified to take the management in the absence of the principal, desires an immediate ENGAGEMENT. Salary, £2 2s. per week. References to eminent London architects.—Address, X. X. 8, Sussex street, Bedford-square, W.C.

TO DECORATORS AND PAINTERS.

A YOUNG MAN wishes to IMPROVE himself. Wages but a very secondary consideration, provided he is put to good work.—Address, J. E. 55, Euston-road, N.W.

TO RED POTTERS AND DRAIN PIPE MAKERS.

A THOROUGHLY GOOD HAND in the above trade is in want of EMPLOYMENT.—Address, A. B. care of Mr. Jordan, 71, Amelia-place, Villa-road, Plumstead, Kent.

AN ENGINEERING and ARCHITECTURAL ASSISTANT, engaged for the past sixteen years on plans, &c. for public works of water supply, gas, and town sewerage, and in designing and superintending the erection of private and other buildings, is now open to a permanent ENGAGEMENT. First class testimonials.—Address, A. C. E. 5, Trellick-terrace, Vauxhall-road, Pimlico, S.W.

TO PAINTERS AND DECORATORS.

A STEADY YOUNG MAN from the country wishes for a SITUATION in a good West-end firm, where he may improve himself.—Apply to E. P. 8, Jerusalem court, St. John street, Clerkenwell

A THOROUGHLY practical PAINTER, PAPERHANGER, plain or ornamental GLAZIER, or DISTEMPERER, &c. desires EMPLOYMENT. Is fully competent to take charge of work or a business, Town or country.—Address, REFONSE, 98, Hampstead-road, N.W.

TO BUILDERS AND MASONS.

A RESPECTABLE YOUNG MAN is desirous of obtaining Permanent EMPLOYMENT as STONE MASON. He has a knowledge of Mensuration, and can keep accounts. Unexceptionable references. A shop in London would be preferred. Address, H. WARREN, Barnet-street, Sandwich, Kent.

TO BUILDERS.

A PRACTICAL Managing Shop Foreman, of superior abilities, is prepared to treat with a London or first class provincial builder.—Address, C. S. B. 7, 84, Thomas-street, Islington, N.

AN active, energetic Young Man, practically experienced in the provincial and metropolitan building and contracting business, manual and official, seeks a suitable permanent ENGAGEMENT as GENERAL ASSISTANT, with a builder or surveyor.—Address, G. J. K. care of Mr. Leggett, Stationer, 21, North Audley-street, London, W.

A FIRST-CLASS Writer, Gilder, and Heraldic and Ornamental Painter desires an ENGAGEMENT. He is a thorough practical draughtsman and painter.—Address, A. Z. 30, Duke-street, Grosvenor-square, W.

A MARRIED MAN, aged 33, with no incumbrance, is desirous of obtaining a SITUATION as ENGINE DRIVER. Can manage either stationary or portable, do general repairs, and dress mill-stones.—Address, A. Z. Post-office, Bletchingley, Surrey.

CITY of LONDON.—BARBERS' HALL.—TO BE LET, on a Building Lease, Nos. 33, 34, and 35, Monkwell-street, Wood-street, and a portion of the Court-yard Hall and Offices in the rear. For particulars and plans, apply to the Beadle, at the Hall; or to the Clerk, HESLEY GROSE SMITH, Esq. 4, Warnford court, Throgmorton-street, E.C.; or to Mr. C. J. SHOPPEE, Architect, 61, Doughty-street, W.C.

FREEHOLD LAND TO BE SOLD or LET on Building Leases:—Two Acres near Forest-hill Railway-station; One Acre adjoining Norwood Railway station; Three Acres at Gipsy-hill Grove road, Old Kent road.—Apply to Mr. MAY, Acorn Wharf, Old Kent road.

TO BE LET, a capital WHARF and DRAWDOCK, known as "Searle's Wharf," most eligibly situated at the foot of New Westminster Bridge, and opposite the Houses of Parliament.

This drawdock has been closed for some years, and is now about to be re-opened.

From its excellent situation and the probability of the Scotland-yard Wharf being closed at an early date by the Thames Embankment, a very valuable business may no doubt be depended on.

A residence is attached, which may or may not be taken with the wharf or drawdock.

Apply to Mr. W. HEWETT, 84, York-road, Lambeth.

WANTED, within one mile of the Royal Exchange, to PURCHASE, on a Long Lease, LAND or TENEMENTS, containing an area of about 6,000 feet, with a frontage in a leading thoroughfare of about 40 feet.—Particulars to be addressed to JOHN GRIFFITH, Esq. Architect, 16, Finsbury-place South, E.C.

BUILDING LAND, UPPER NORWOOD, close to the Crystal Palace.—TO BE LET, for the erection of small VILLAS, a class of residence much needed, and certain to let before completed. Advances if required.—Apply to Mr. T. K. GREEN, Architect, 22, College-hill, Cannon street, E.C.

TO BE DISPOSED OF, TWO excellent CARCASES, lease 87 years, held direct from freeholder; ground rent £8 per annum for both. Also several Plots adjoining. Bricks can be supplied on the ground if required.—For particulars, apply to Mr. J. FURNELL, 1, Arthur-grove, Kentish Town; or to Mr. MOORE, 122, Euston-road, N.W.

TO BUILDERS.—PUTNEY MAIN ROAD.—Superior BUILDING LAND TO BE LET, on Building Leases for 99 Years, having an entire frontage on the main road. Subsoil gravel. Ground rent moderate. Liberal advances made to respectable parties.—For plans, &c. apply to J. H. ROWLEY, Esq. Architect, 17, St. Helen's-place, City.

RICHMOND, SURREY.—FREEHOLD LAND TO BE LET for Building, including Mansion to be converted, situate near the centre of the town and railway station.—Apply to view at Sheffield House, Paradise-road; and for terms to Mr. W. HUDSON, Architect, 19, Bennet's-hill, E.C.

TO BUILDERS and OTHERS.—TO BE LET, on Building lease, about 150 ACRES of very eligible FREEHOLD LAND, commanding extensive and picturesque views over Burbey Park and the Thames; near railway stations; gravelly soil.—Apply to W. WIGGINTON, Esq. 34, Colet-place, Commercial-road, E.; or to Messrs. KENT & SONS, Solicitors, Hampton, S.W.

HENLEY-ON-THAMES.—BUILDING GROUND on the Banks of the Thames.—TO BE LET, on Building Lease, THREE PLOTS of GROUND, immediately adjoining the new road by the river side leading from Henley to the Great Western Railway Station. Two of the Plots have a frontage to the river of 117 feet and a depth of about 110 feet, and the other a frontage of 32 feet and a depth of 90 feet. The land is most beautifully situate, and commands extensive views of Park Place and the River, offering advantages for building first class villa residences as soon as to be met with.—Full particulars may be had of Messrs. COOPER, Solicitors, Henley-on-Thames; and Messrs. HEWS & SON, Estate Agents, Henley-on-Thames.

TO BRICKMAKERS, BUILDERS, and OTHERS.—About 60 Acres of good CLAY FOR SALE, about 9 miles west of London. Canal, railway, and road adjoin the land. For particulars apply to Messrs. LINDSAY, MASON, & FISHER, Solicitors, 84, Bucklebury street, E.C.

TO BUILDERS.—TO BE LET, on a Repairing Lease, several HOUSES at Bethnal-green.—For terms and particulars apply to Mr. ROBERT PARRIS, 5, Wolsingham-place, Lambeth.

ELIGIBLE BUILDING LAND TO BE LET, on 99 years' Lease, in the best part of Stoke Newington, where houses are in great demand. Bricks on the estate, and supplied at a low price.—Apply to Mr. RODDA, Bouverie-road, Church-street, Stoke Newington.

BUILDER'S PREMISES, HACKNEY.—TO BE LET on LEASE, a capital YARD, with spacious Workshops and Offices, and with or without Dwelling-house. There is a small Stock of well-seasoned Material, which may be purchased at a valuation.—For particulars apply to Mr. THOMAS BULL, Auctioneer, 50, Cornhill, E.C.

COAL WHARF.—WANTED, for London Trade, a COAL WHARF, or a SITE for one.—Address, S. S. care of Messrs. Hammond & Nephew, 77, Cheapside, E.C.

TO BRICKMAKERS. — BRICKFIELDS TO BE LET, with immediate possession, at Bernard's Heath, St. Albans, Barnfield Common (half way between St. Albans and Luton), and Leverstock green (half-way between St. Albans and Hemel Hempstead). It is intended immediately to construct the Midland Counties Railway, with stations within one mile from the two first mentioned brickfields, and also to build a new road at St. Albans. All the above brickfields have for many years been worked by the proprietor, lately deceased.—Applications to be made to Mr. R. GROVE LOWE, St. Albans.

BUILDING LAND TO BE LET or SOLD, at Sydenham, near the Church, the Railway Station, the Crystal Palace and Park. It fronts a wide, handsome roadway, and has ample depth for garden grounds. All the houses on the estate are of a good class, and the rents obtained give an average return of 12 per cent. on the outlay. The remaining frontage will be let at a low rent, to secure the ground being speedily covered.—Terms and particulars of Messrs. EDWIN FOX & BOUSFIELD, Land Agents, 41, Coleman-street, Bank, E.C.

NORFOLK COAST.—HUNSTANTON, ST. EDMUND'S—Eligible BUILDING LAND in this rising watering-place situated near Sandringham, the seat of H.R.H. the Prince of Wales, TO BE LET, on very reasonable terms for the erection of first and second class houses and villas. There is direct communication from London to St. Edmund's, via Cambridge and Lynn. The surrounding country is most attractive, the locality is famous for salubrity; the chalk and sand cliffs are bold and picturesque; the sea beach and sands are unequalled, and the fresh water is excellent. There is a chalybeate spring within a mile. The sewers are already laid down by the freeholder, under the best engineering advice, and the roads are made. The existing accommodation is utterly insufficient for the summer and autumn visitors. Model drawings, specifications, according to which several houses have already been erected, can be seen, and all further information obtained, on application to Mr. C. W. FREEBY, at the Station; Mr. F. FREEBY, the Architect of the Estate, No. 13, York-place, Portman square; and of Messrs. WILLIAMS & JAMES, Solicitors, 62, Lincoln's-inn fields, London.

LAND, situate on Bromley-hill, Kent, TO BE LET on Building Lease, suitable for the erection of villas for residence or investment, they being in great demand in that locality. The Land is within ten minutes' walk of the Shortlands Station, and in a beautifully wooded district. The site is elevated, it has a sub-soil of white sand and dry gravel, and a supply of very fine spring water.—Apply to JOHN WIMBLE, Esq. 9, Walbrook, E.C.

FRIERN BARNET (No. 433).—TO BE SOLD, a compact FREEHOLD ESTATE, within a few minutes' walk of the Southgate Station on the Great Northern Railway, comprising five acres of land, with two cottages and outbuildings thereon, well adapted for a public institution, or could most advantageously be cut up in plots for building purposes.—For particulars and terms apply to Messrs. FRICKETT & SON, Land Agents and Surveyors, 62, Chancery-lane, W.C. and Highgate, N.

BUILDING LAND TO BE LET, at Canonbury (Marquess-road), at Lower Norwood, a most eligible site, commanding beautiful views, close to the station; at Croydon, &c. Also, at Edward's road, Bow, some carcases for completion. The usual advances of money to respectable parties.—Apply at the Offices of Mr. J. EDMESTON, Architect and Surveyor, 8, Crown-court, Old Broad-street, E.C.

WOODFORD RAILWAY.—The GROVE, WANSTEAD.—Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. Still genteel, situation healthy, and water excellent. The Snaresbrook Station is 400 yards only from the Estate, and the City is reached in twenty five minutes. The Leases will contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Blackheath, Tottenham, Kingston; some very eligible SITES in the Grove road, Muswell, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 25, Cannon-street.

GUILDHALL, 24th June, 1863.—The COMMITTEE for LETTING the CITY'S LANDS will meet at Guildhall, on WEDNESDAY, the 8th JULY next, at ONE o'clock precisely, to receive PROPOSALS for LEASES of a HOUSE, 22, Tottenham-court-road, a House No. 180, Goswell-street, a House No. 20, Old-street, St. Luke's, and a House No. 53, Paul street, Finsbury.—Plans of the Property may be seen, and further particulars and forms of Tender obtained, upon application at the Architect's Office, Guildhall.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament, 18 & 19, VICT. cap. 133), 14, RUSSELL STREET, Covent Garden, London. Advances from £50 to £1,000, upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.

EDWARD HARPER, Secretary.

MORTAR-MILLS, CRABS, CRANES, BLOCKS, JACKS, &c. &c.

and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for new works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

A BARGAIN.—THREE exceedingly handsome STATUARY MARBLE CHIMNEYPIECES TO BE SOLD at less than cost price. They were bought for a mansion, but afterwards carved oak was preferred.—Apply to Mr WYATT, 61, St. Aldate's, Oxford

Cornelius Paine, jun. esq.	Noel Whiting, esq.

Thomas Tallemach, esq. *Secretary* Samuel Brown, esq. *Actuary*.
LIFE DEPARTMENT.—Under the provisions of an Act of Parliament, this Company now offers to new Insurers EIGHTY PER CENT. OF THE PROFITS, AT QUINQUENNIAL DIVISIONS, OR A LOW RATE OF PREMIUM without participation of Profits.
Since the celebration of the Centenary of the Company in 1821, the amount of Profits allotted to the Assured has exceeded in Cash value 800,000*l.* who in representing equivalent Reversionary Bonuses of 1,058,000*l*
After the Division of Profits at Christmas 1860, the Life Assurances in force, with existing Bonuses thereon, amounted to upwards of 4,700,000*l.* the Income from the Life Branch 227,884 per annum, and the Life Assurance Fund, independent of the Capital, exceeded 1,618,000*l*
LOCAL MILITIA and VOLUNTEER CORPS.—No extra premium is required for service therein.
LOANS granted on Life Policies to the extent of their values, if such values be not less than 50*l*
ASSIGNMENTS of POLICIES.—Written notices of, received and registered.
MEDICAL FEES paid by the Company, and no charge for Policy Stamps.
Notice is hereby given, That Fire Policies which expire at Midsummer must be renewed within fifteen days at the Office, or with Mr. SAMS, No. 1, St. James's-street, corner of Pall-mall; or with the Company's Agents throughout the kingdom; otherwise they become void.
Losses caused by Explosion of Gas are admitted by this Company.

NORWICH UNION FIRE INSURANCE SOCIETY.
Notice—MIDSUMMER RENEWALS.
Mercantile and Dock Insurances in the Reduced Rates.
The business of the Company exceeds 70,000,000*l.*
The duty paid to Government for the year 1861 was 83,076*l.* and the amount insured on farming stock 10,056,762*l.*
A bonus of three-fifths of the profits periodically made to parties insuring, who have thus from time to time received sums amounting in the aggregate to 440,000*l.*
The rates of premium are in no case higher than those charged by the other principal offices making no returns to their insurers.
For prospectuses, apply at the Society's Offices, Surrey-street, Norwich, and 6, Crescent, New Bridge-street, Blackfriars, E.C.

PHŒNIX FIRE ASSURANCE COMPANY, Lombard-street and Charing-cross, London. Established in 1782.

William Cotton, esq.	John Tho. the Onley, esq.
John Davis, esq.	Benjamin Shaw, esq.
George Arthur Puller, esq.	Wm. Jones Thompson, esq.
Charles B. Goodhart, esq.	Sir Benjamin Tollemache, bart.
James Alexander Gordon, esq.	Matthew Whiting, esq.
Edward Hawkins, junr. esq.	

AUDITORS.

John Hodgson, esq.	Peter Martineau, esq.
Joseph Samuel Leecher, esq.	

SECRETARY—George William Lovell.
ASSISTANT SECRETARY—John J. Broomfield.
Insurances against Loss by Fire are effected by the Phœnix Company in a very descriptions of Property, in every part of the world, on the most favourable terms.
The promptitude and liberality with which its engagements are always met by this Company are well known; and the importance of its relations with the public may be estimated from the fact that since its establishment it has paid more than Eight Millions Sterling in discharge of Claims for Losses by Fire.
Insurances with this Company expiring at Midsummer must be renewed within fifteen days thereafter, or they will become void.
Receipts are now ready at the principal Offices, Lombard-street and Charing-cross, and with the respective Agents throughout the United Kingdom.

Established 1777.
KENT'S BRUSHES have been celebrated for their superior quality for the last eighty-four years, and may always be depended upon as the best that can be made.

PATENT GRAINING APPARATUS.—
TO HOUSE PAINTERS, GRAINERS, BUILDERS, RAILWAY COMPANIES, SHIP BUILDERS, &c.
One of the greatest improvements of the age is KERSHAW'S PATENT GRAINING APPARATUS, for producing an imitation of the various woods. They are very extensively used, and with great success. They are very cheap, and will repay the cost of them in two days' working. They only require a trial, and any person studying his interest would not be without them. A prospectus will be sent upon the receipt of a stamped directed envelope addressed to T. KERSHAW, Patent Graining Tool Manufacturer, 33, High-street, Marylebone, London, W.
N.B. One of the Patent Graining Tools will be forwarded upon the receipt of a Post-office order for 22s.

TO PREVENT BLISTERS, AND
REMOVE OLD PAINT, VARNISH, &c.
USE NAENIARE & CO.'S LETHICUM. Sold at 8s. per gallon. Also, Brushes to apply and remove, 8s. per pair.—For circulars, &c apply at 11, St Andrew's-hill, E.C. London. Success guaranteed
N.B. Country orders must contain a Cheque or Post office Order.

IMPORTANT to BUILDERS and PAINTERS.—Genuine White Lead, 30s. per cwt.
Linseed Oil, 3s. 9d. per Gallon; Boiled Oil, 4s. per Gallon.
Turpentine, 8s. per Gallon.
Fine Pale Oak Varnish, 9s. per Gallon.
For cash, at EDWARD PRICE'S Colour and Varnish Warehouses, 80, Upper Ebury street, and 45, Cobridge street, Pimlico, S.W.
Every article for the Trade at the lowest prices

PRIZE MEDAL, 1862.
HAMILTON & CO.
No. 10, GREEK-STREET, SOHO-SQUARE, LONDON, W.
Sole Manufacturers of
C. A. WATKINS'S PATENT WIRE-ROUND ROUND and OVAL PAINTING BRUSHES.
Distemper Brushes, Sash Tools, Stippling Brushes, Gilders' Graiuers' Tools.
These goods are made of the best materials and workmanship, and have obtained a high reputation among the chief decorators in the kingdom. Varnish and Colour Manufacturers, Oilmen, Merchants, &c. are supplied on the lowest terms. Price Lists forwarded on application.

BLACKERTON MINERAL.—An Economical Paint, of good body and superior quality, for external or internal purposes, of every description. Dries quickly, and is very durable. Mixed with whitelead, it makes a capital lead colour; and with yellow ochre, a good bronze or invisible green. Price, 5s. per cwt.—Apply to Mr. W. SANSOME, General Merchant, near the Railway Station, Taunton, Somerset.

THE ANCHOR BRANDED TURPS.—
"FACTS ARE STUBBORN THINGS."

Ten Thousand Gallons of this TURPS have been sold during the first three months of its introduction to the trade.
Manufactured only by CARLESS, BLAGDEN, & CO. HOPE CHEMICAL WORKS, Hackney Wick, N.E.
City Office, 2, New London-street, near the Blackwall Railway Terminus, E.C. where samples and all particulars may be had.
Sold by all Oilmen.
N.B.—Ask for the "Anchor Branded Turps."

TURPENTINE.
GARROD & COMPANY'S ENGLISH TURPENTINE is superior in use to any other, and perfectly free from any offensive odour.
Sample gallons may be obtained at the Manufacturers', price 4s.
GARROD & COMPANY,
Varnish, White Lead and Colour Manufacturers,
56, Upper Thames street, London, E.C.

MINTON, HOLLINS, & CO. Stoke-upon-Trent, beg to inform architects, the gentry, and others, that, in consequence of the increasing demand for their Encaustic and Mosaic Pavements, and with the view of facilitating the execution of orders, they have opened an additional Show-room, at their Establishment, No. 50, Conduit street, London, where experienced draughtsmen will be constantly in attendance, to afford all information required.
DRAWINGS and ESTIMATES, on the receipt of plans, will also be promptly furnished, on application at the Manufactory, Stoke-upon-Trent.
MINTON & CO. take the present opportunity of stating that they have always in stock a large and varied assortment of tiles, suitable for flower boxes, stoves, and other ornamental purposes.

INDIA-RUBBER MILL BANDS,
WASHERS for Steam Joints, HOSE PIPES and FLEXIBLE TUBING.
A STOCK OF THE ABOVE ALWAYS ON HAND.
JAMES LYNE HANCOCK,
VULCANIZED INDIA-RUBBER WORKS, GOSWELL-MEWS, GOSWELL-ROAD (opposite Spencer-street), LONDON, E.C.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator for the admission of Pure Air.

THROUGH THE EXTERNAL WALL.
These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

TEMPLE JOINERY WORKS,
CURSITOR-STREET, CHANCERY-LANE, E.C.

Manufacturers of Silicates of Soda and Potash, Aluminates of Soda and Potash,

PATENT INDURATING SOLUTIONS,

For the Preservation of Stone, Cement, &c.;

PATENT SILICEOUS PAINT, FOR COATING STONE, CEMENT, STUCCO, &C.

Specimens of the Silicates and Aluminates, and of their applications, may be seen at the CONSTRUCTIONAL DEPARTMENT, SOUTH KENSINGTON MUSEUM.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

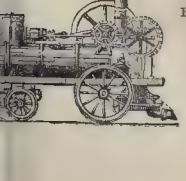
PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and of Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo-Silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to be lavished in hard stone has been an obstruction to Art; but since the Fluo-Silicic process can be applied so readily to a soft stone after it is carved, that obstruction exists no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information, apply to the Manager

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor. 2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the labour usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 48 lbs. to a square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.



CROGGON and CO'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel.

And deadening Sound.

Samples, testimonials, and full instructions, on application to

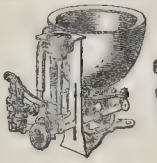
Among others, Wellington Barracks, Royal College of Surgeons, &c. &c. Prospectuses on application to the Patentees, TYE & ANDREW, Brixton-road.

SUPPLIED BY ALL LEAD MERCHANTS AND IRONMONGERS.

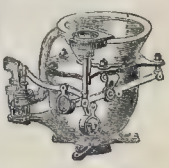
INTERNATIONAL EXHIBITION, 1862.
CLASS 35, NO. 6849.

3s. 9d.



The ONLY MEDAL "for STONEWARE" has been awarded to DOULTON & WATTS, LAMBETH POTTERY, LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenwares.



Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness, it cannot be surpassed by the most expensive closets.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.

Valve.

Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is secured. Any number can be worked by one supply-pipe. No cistern valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick lane, Newgate street, London.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION 1862.

IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.

May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

Finally, that the trade term, "TERRO METALLIC," is the exclusive right of the Proprietor; and finally, that the "Reports of the Juries," page 561, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Terras," Tunstall, Staffordshire, as the best of the kind in the world.

HAY'S PATENT WATERPROOF GLUE and INDIA RUBBER VARNISH.—To ARCHITECTS, BUILDERS, PAPER-HANGERS, &c. &c.—The WATER-PROOF GLUE is a special anti-damp, and is suitable for contractors, joiners, cabinet-makers, &c. &c. The VARNISH for damp walls, previous to papering, coating zinc verandahs, &c. &c. Copy of a letter from Messrs. Rogers & Booth, contractors, Gosport:—

"We have repeatedly used your Waterproof Glue as a preventive against damp, and have found it most valuable in preparing walls to receive paper. In one instance, where the walls were thoroughly saturated with moisture from earth filled against the outside, we used your varnish internally, and pasted the surface, within a few hours of its being applied, with complete success. We have also used your preparation for coating a large number of cast iron piles, at the Admiralty Pontoon, for her Majesty's War Department."

To be had from all Ironmongers, Oil and Colourmen, &c.

SALES BY AUCTION.

VALUABLE FREEHOLD AND COPYHOLD BUILDING LAND, WHITECHAPEL, occupying a site of about six acres.

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, at the MART, on WEDNESDAY, JULY 1, 1863, at TWELVE o'clock, in one LOT, a most important site of FREEHOLD and COPYHOLD LAND, about 6 acres, situate in the rear of the Whitechapel Distillery, Bucks-row, abutting upon the Eastern Counties Railway, from which a siding might be formed. And with approaches from Winchester street, Selby street, and other adjoining streets. For the ere tion of any large manufacturing establishment, this property is of large value, from its space and proximity to the City. Printed parti ulars are in course of preparation, and with plans, may be shortly had of Messrs. TENANT & DARLEY, Solicitors, Symonds's-buildings, Gray's inn, W.C.; of Messrs. BOCKETT, SON, & BARTON, Solicitors, Lincoln's-inn-fields, W.C.; at the Mart; and of Messrs. FULLER & HORSEY, Billiter-street, London, E.C.

FREEHOLD BUILDING LAND, close to the Norwood Junction Station on the London, Brighton, and South Coast Railway, at which upwards of 100 trains stop to and from London Bridge and Victoria daily, and only a short distance from an intended station on the Mid Kent and Addiscombe Railway, about nine miles from London.

MESSRS. WINSTANLEY have received instructions to offer for SALE by AUCTION, at the MART, Bartholomew lane, on WEDNESDAY, the 1st of JULY, in thirty lots, the valuable FREEHOLD PROPERTY, known as the ENMORE PARK ESTATE, land-tax redeemed and free from all incumbrances, about twenty-three acres of most eligible building land, desirably situate between the Stanhope and South Norwood roads, in the parish of Croydon, and the Norwood Junction Station, commanding extensive views of the surrounding picturesque scenery, and within a short distance of the Crystal Palace. The property has a frontage to the above roads of nearly 8,000 feet to capital roads, and presents excellent sites for the erection of villas or other residences, for which there is a growing demand in this locality; the lots will vary in quantity from about half an acre to two and a half acres, and in the hands of building capitalists this property offers attractions of no ordinary character. To be viewed Tuesday and Wednesday, with plans, map, &c., of which twenty-one days preceding the sale, in Croydon, of Messrs. DRUMMONDS, ROBINSON, & TILL, Solicitors; of Mr. JOHN BERNEY, Surveyor; at the Greyhound Inn, the Bedford Arms, Stanhope road, and the Windmill, St. James's-road, Croydon-common; the Jolly Sailor, South Norwood; and in London, at the Place of Sale; and of Messrs. WINSTANLEY, No. 10, Paternoster-row, E.C.

BROMLEY, KENT.—Charming BUILDING SITES for Gentlemen's Residences. — Immediately adjoining the Shortlands Station, on the Mid Kent Railway, only ten miles from London Bridge, eligibly laid out for occupation in Villa lots, or for the erection of first-class Mansions, with several acres of land to each.

MESSRS. DEBENHAM & TEWSON will SELL, at the MART, on TUESDAY, JULY 7th, at TWELVE, in nine lots, of from eight to Sixteen Acres each (unless previously sold in one lot by private contract) the greater portion of the important and very valuable FREEHOLD BUILDING ESTATE known as Shortlands; comprising upwards of 120 acres, affording some of the most desirable sites for building to be met with near London. Among the advantages offered are—the short distance from the station, the great facilities afforded by railways for reaching all parts of the metropolis per mile, the plentiful supply of water, the rich scenery of the neighbourhood, the beautifully undulating character of the land and its applicability for division so as to insure fine views as a necessary to each of the separate properties into which it is proposed to be all tted. There can be no question that the estate is one which will take very high rank in public estimation, and the demand for villas and first-class houses in the district already so great that it often equal inducements to those who may be desirous of entering into building operations on a large scale, as to gentlemen who may be in search of a residential estate. Lots and Plans, and plans, now ready, of JNO WHICHCORD, Esq., Architect, 16, Walbrook; of ROBERT RITCHIE, Esq., Architect, 7, Beaufort-buildings, Strand; of Messrs. BURCHELLS, Solicitors, 5, Broad Sanctuary, Westminster; and of the Auctioneers, 80, Cheapside.

IMPORTANT SALE.—To Builders, Contractors, and Others.—Boston, Lincolnshire.

TO BE SOLD by AUCTION, in the month of JULY next, a valuable FREEHOLD ESTATE, situate in Witham street, in Boston, consisting of excellent and substantial BUSINESS PREMISES, comprising a newly erected dwelling house, office, large carpenter's and stonemason's shops, timber, lime, and other yards stables, a large wharf, and other premises. A very extensive and lucrative business has been carried on the premises for a series of years past, and the same were lately in the occupation of Mr. Benjamin Scoffin, Builder, deceased, and are now of the Executors in Trust under his will. To view the premises, and for further particulars apply to Mr. JOHN CARTWRIGHT, of Boston aforesaid, Ironmonger, and Mr. HOBERT MARSHALL, of the same place, Chemist and Druggist; or at the Offices of Mr. FREDERICK COOKE, Solicitor, Boston.

Boston, June 18th, 1863.

DEVON.—St. MARY-CHURCH, near TORQUAY.—Desirable Business Property for Sale; also a large Stock of Marble, Madrepores, &c. TO BE SOLD by AUCTION, by

MESSRS. MANLEY & CHAVE, at GRENSLADE'S MANOR HOTEL, St. Mary-Church, on TUESDAY, the 14th day of JULY next, at TWELVE o'clock precisely, the DWELLING HOUSE and BUSINESS PREMISES lately occupied by Mr. John Woodley deceased. The stock in trade will be taken and at the principal thoroughfare of St. Mary Church, and will, with easy distance of the important and still increasing town of Torquay, the dwelling house is well built and very commodious, and contains, in addition to the ordinary apartments for residence, boat shops, well adapted to any business; and immediately adjoining is a large yard, with extensive and convenient workshops, stables, and other necessary outbuildings. For upwards of fifty years the business of an extensive Marble and Madrepore Manufactory, which acquired great celebrity, has been carried on by the late proprietor and his predecessors, and a rare opportunity is now afforded to parties seeking to embark in such an undertaking without the risk attending a new establishment. The Babbacombe and Petitor Marble and Madrepore Quarries are in close proximity, and there are other quarries of an important character in the immediate neighbourhood; the premises are, however, well adapted for any other business where situation and space are of great importance. The property is held for an absolute term of ninety-nine years, which commenced on the 25th MARCH, 1847, and is subject to an annual ground rent of 9l.

Immediately after the Sale of the above, and on the following day, an AUCTION will be held on the PREMISES, for the DISPOSAL in lots, to suit the convenience of Purchasers, of a large Assortment of articles in ENGLISH and FOREIGN MADREPORES, and of UNMANUFACTURED MATERIALS, TOOLS, IMPLEMENTS, MACHINERY, &c. In the above are contained many Chimney-pieces, Inlaid Tables, Brackets, Vases, Pedestals, &c. &c. all manufactured from the most beautiful specimens of Marble, of the most elegant designs and workmanship. Also, about 500 tons of Unmanufactured rich Sicilian, Irish, Black, and English MARBLE, the greater portion of the latter having been taken from the most noted Devonshire quarries. Marble Manufacturers, Builders, Agents, and Others will find the above well worthy their attention.—To view, and for all further particulars, application may be made to the Auctioneers, Victoria Parade, Torquay, of whom catalogues of the stock may be obtained a week before the day of sale; or to Messrs. KITSON, Solicitors, Torquay.

Torquay, 19th June, 1863.

N.B.—Should the above Property be previously disposed of by Private Contract, due notice will be given thereof

Salvage from Fire.—BUILDER'S STOCK and quantity of Materials removed from the General Post-office.

F. May be viewed, and Catalogues had at the Architect's Office, Guildhall, and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament-street, S.W.

WALWORTH ROAD.—Extensive Sale of Building Materials.

PULLEN, HORNE, & EVERSFIELD are instructed by the Worshipful Company of Fishmongers to SELL by AUCTION, on the PREMISES, on TUESDAY, JULY 14th, at TWELVE, all the valuable BUILDING MATERIALS of about 25 Dwelling houses, Shops, and Premises, situate on Crown row, in front of the Walworth-road, Prospect-row, and Crown-square.—Further particulars in a few days, when Catalogues may be had of W. B. TOWSE, Esq., Fishmongers' Hall; of RICHARD SUTER, Esq. Architect, 28, Penchurch-street; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore street, E.C. and 40, Parliament-street, S.W.

No. 19, MILLBANK-STREET.—TO SCULPTORS, MASONS, BUILDERS, AND OTHERS.

PULLEN, HORNE, & EVERSFIELD are instructed by Mr. J. Udny, Agent for Count Lazzani & Son, to SELL by AUCTION, at the MARBLE WHARF, No. Millbank-street, Westminster, on THURSDAY, JULY 2nd, at ELEVEN for TWELVE o'clock, a large assortment of MARBLE, in Blocks and Slabs; consisting of statuary, vein, sicilian, Sienna, and other varieties; also several thousand feet of slab, garden figures, &c. Approved bills at 3 and 6 months will be required for all sums above 5l. May be viewed on the premises had at the Place of Sale; and of PULLEN, HORNE, & EVERSFIELD, 40, Parliament-street, Westminster, and 80, Fore-street, City.

BISHOPSGATE-STREET WITHIN.—TO BUILDERS, CONTRACTORS, TIMBER MERCHANTS, AND OTHERS.

MR. MARSH has received instructions from the Directors to SELL by AUCTION, on the PREMISES, on TUESDAY, JUNE 30th, at ONE o'clock, punctually, the whole of the Valuable MATERIALS and FIXTURES of the National Provincial Bank of England, 112, Bishopsgate-street Within, in consequence of the site being required for a new building of new banking premises: including about 35 squares of slating, oak and fir timber in rafters, joists, and girders; 200 squares of flooring, capital wainscot, mahogany, and other doors; 75 pairs of elegant sashes; a handsome stone staircase, with large landing; York and Portland Stone, in paving, steps, cornice, stringcourse, sills, plinths and pedestals, handsome pediment and portico; about 1,000,000 sound stock bricks; 20 tons of lead, in flats, gutters, hips, cisterns, and pipes; marble and other chimney pieces, stoves, ranges, fittings, and effects. May be viewed two days prior to the Sale, and Catalogues obtained on the Premises; of JOHN GIBSON, Esq. Architect, 14, Great Queen street, Westminster; and at Mr. MARSH'S Offices, 9, Charlotte-row, Mansion House.

FARM AND SLATE QUARRY, SOUTH DEVON.—An excellent Farm, with large and valuable Slate Quarry, in the Parish of Ugborough, near Ivybridge, Devon, twelve miles from Plymouth, and close to three Railway Stations on the South Devon Railway, TO BE SOLD by AUCTION, by

MR. JOHN MALLET, on MONDAY, the 13th day of JULY next, at the LONDON INN, Ivybridge, at TWO o'clock for HALF-PAST in the afternoon, either together or in the following lots (unless a Purchaser shall in the meantime have been declared treated), viz.:—the FEE SIMPLE of all that BARTON or FARM, called "Wood and Blowdens," situate in the parish of Ugborough, Devon.

Lot 1 comprises a good FARM-HOUSE, with all necessary farm building, and SEVENTY SEVEN ACRES (be the same more or less) of superior orchard, meadow, pasture, and arable land, in the occupation of Mr. Richard Cole, as tenant thereof, for a term of seven or fourteen years from Lady Day, 1861. Also a SLATE QUARRY, containing about four acres of estate, which has been worked, and about a century, and which is now held under lease for a term of twenty-one years from the 24th JUNE, 1853, by E. T. Roe, esq. M.D. producing a large quantity of slate of very superior quality, and fifty acres of the farm contain slate of the best description, and several acres could be granted thereout, for roads being given to Lot 2.

Lot 2. Two superior COTTAGES, one of which is fit for the residence of a respectable family, having eight rooms, and the other a cottage adjoining. Four rooms, with necessary outbuildings. Two good Gardens and a Field of Land, containing 3a. 0r. 23p. or thereabouts.

The WHOLE of the PROPERTY is TITHE FREE, and LAND TAX REDEEMED.

The above property being full of slate rock, within a mile and a half of the Stowford Siding, and about two miles from Ivybridge and King-bridge-road stations on the South Devon Railway, only 10 miles from the Port of Plymouth, and nine miles from Totnes, gives great facilities for sending slate to all parts of the kingdom. Such an opportunity for a spirited capitalist or a company to enter largely into the slate trade is very seldom to be met with. From the great facilities for sending off the goods by rail and water, it is quite certain that a large profit can be realised. To persons desirous of mercantile investment this estate presents an opportunity of more than ordinary advantage. The farm is pleasantly situated, and many good sites for building can be found on the property. The market towns for sale are Ivybridge, two miles (passable); Modbury, three miles, ditto; and Totnes, nine miles, ditto. There is good trout fishing in the neighbourhood. Foxhounds are kept at Ivybridge, and hunt the country immediately around. For viewing application may be made to Mr. HENRY SOPER, the owner, at Wood Cottage, on the property, on Tuesdays, Wednesdays, and Thursdays. Plans and particulars can also be obtained of him; of the Auctioneer, Ashprington, near Totnes; or of Mr. WALTER FRIEND, Solicitor, Post-office Chambers, Exeter.

Dated 3rd June, 1863.

GEORGE MITCHELL'S MARBLE and STONE WORKS, WALTON STREET, Oxford-street.

Notice of PRIVATE SALE of about 200 MARBLE CHIMNEY-PIECES, to be sold at very reduced prices (to save the expense of removal to the Brompton road), in the following Marbles, viz.:—Statuary, Rouge Royal, Black and Gold, Black, Sienna, Bardilla, Dove, California, St. Ann's, Rouge Jasper, Jeune Fleure, Brocatella, Genoa Green, Irish Green, Blue Belgic, Emperor Red, Irish Pearl, Campaine Melange, Vein, Serpian, and various excellent specimens of British Marbles, varying in price from 12s. 10s. to 50l.; and for elegancy of design, workmanship, and quality, not to be surpassed in England. Purchases to the extent of 30l. and 50l. approved bills of three and four months will be taken, less 25 per cent. cash. Purchasers from the country will be supplied with packing-cases, and the same packed and delivered to any of the metropolitan stations for 1 per cent. on the amount purchased.

TO TIMBER MERCHANTS, CABINET AND PIANOFORTE MAKERS, BUILDERS, AND OTHERS

About 13,000 feet super. of Mahogany, and other well assorted Stock, in all upwards of 50 lots.

MESSRS. LEREW & LEREW will SELL by AUCTION, on the PREMISES, Camden-terrace, Camden Town, on MONDAY, JUNE 29th, at TWELVE for ONE, 49 logs of MAHOGANY, 2,500 yellow, white, spruce, and pine planks, deals, and battens; flooring, quartering, die-square birch cut stuff, four panel doors, moulding machine and mouldings, slating battens, pantile laths, pews, lockers, &c.—Auction Offices, 2, Curlington-street, Hampstead road, near the Euston station

BENEFIT of CREDITORS.—9,700 Pieces of PAPERHANGINGS, 120 Marble Chimney-pieces, 700 feet Gilt Room Mouldings, and 24 Register-stove Containers and Pans. Removed from the Factories for convenience of sale.

MR. EDWIN WHITE will SELL by AUCTION, without reserve, at the SALE ROOMS, 12, Holborn bars, and 1, Castle street, Holborn hill, on TUESDAY next, at ONE for TWO precisely, an Excellent STOCK of French and English PAPERHANGINGS, comprising golds, flocks, satins, grounds, scraps, dados, and sienna marbles, oaks, &c.; an important Stock of Chimney-pieces, in foreign marbles; 17 feet White Lead and Oil cut, and other items.—May be viewed, and catalogues had on Monday, and morning of sale.

ADDISCOMBE ESTATE, near Croydon, Surrey.—The portion of this Estate to be OFFERED FOR SALE, at the GREYHOUND, Croydon, on TUESDAY, the 30th inst. at SIX for SEVEN o'clock, overlooks the Park, and is one of the best sites for the erection of good Villa Residences, which in this neighbourhood let as soon as they are built.

WIMBLEDON, SURREY.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, opposite the Bank of England, on MONDAY, JUNE 29, at TWELVE for ONE o'clock, in 69 Lots, the remaining portion of the valuable FREEHOLD BUILDING LAND, free from tithe and land tax, with frontages to the new road called Hartfield-road, close to the Wimbledon Station, on the main line of the London and South Western Railway. Nine-tenths of the purchase money may remain on mortgage or contract, at five per cent. to be paid in nine years by half-yearly instalments, but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained ten days before the sale, of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; and of the Auctioneer, 14, Moorgate-street, E.C.; and at the Place of Sale.

ADDISCOMBE COLLEGE, CROYDON SURREY.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the GREYHOUND INN, Croydon, on TUESDAY, 21st SEPT., 1863, at SIX for SEVEN o'clock in the Evening, a further portion of this eligible ESTATE, late the property of the Hon. the East India Company, consisting of about 32 Lots of eligible FREEHOLD BUILDING LAND, with frontages to the St. James's and Park-roads. The lots are well adapted for a good class of Villa Residences. The property is within ten minutes' walk of the New and East Croydon Station; about a mile of that at West Croydon; and when the All Lecombe Railway is completed the station will be on the estate, thus bringing the property in direct communication with the City and West End at all times of the day. Nine-tenths of the purchase-money may remain on mortgage or contract at five per cent. to be paid in 9 years by half-yearly instalments; but the whole or any part of the balance may be paid off at any time on short notice. Particulars, plans, and conditions of sale may be obtained ten days before the sale, of Mr. PALACE, South Lodge, Addiscombe; at the principal Inns in the neighbourhood; of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale.

OLD ASYLUM, BEDFORD.—Excellent BUILDING MATERIALS.

MR. WHITTINGHAM is instructed to SELL by AUCTION, on MONDAY, JULY 6th, 1863, at TWELVE for ONE o'clock, on the PREMISES, close to the town of Bedford, the ELEVENTH PORTION of the excellent BUILDING MATERIALS of the late County Lunatic Asylum: consisting of large slate sills, iron girders, 40,000 stock bricks, a large quantity of fine Kelsh stone quoins, sills, string course, coping, and cornice for gable, &c.; a large quantity of well-seasoned oak rafters, beams, joists, wall-plates, boards, &c.; slates for roofs, York paving, stone steps, brick-bats, fire-wood, scrapers in stone, iron frames, &c.; sash and other window, door, and frames, paving bricks, &c. &c.—May be viewed on the Friday and Saturday before the sale, and catalogues may be obtained of the Auctioneer, 14, Moorgate-street, London, E.C.; and of the Foreman on the Estate.

ADDISCOMBE, CROYDON, SURREY.

MR. WHITTINGHAM is instructed to SELL by AUCTION, on the PREMISES, close to (the town of Croydon, on TUESDAY, JULY 21st, 1863, at TWELVE for ONE precisely, the SIXTEENTH PORTION of the excellent BUILDING MATERIALS of the Military College at Addiscombe, and comprising about 100 squares of Lead Roofing, consisting of five inches Hainneyderes, large slate slabs, and small marble paving slabs, a large quantity of York paving, Portland stone coping and blocks, Portland stone windows and frames with shutters, a quantity of excellent folding and other doors, a water-closet with bath and seat, a bright stove, iron work and lead timber, consisting of joists, purlins, gutters, ridging, trough leads, pipes, principals, firewood, &c. &c. May be viewed Wednesday or Thursday preceding the sale. Catalogues may be obtained of the Foreman on the Estate; and of the Auctioneer, 14, Moorgate street, London, E.C.

REDHILL, SURREY.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, London, on FRIDAY, JULY 24th, 1863, at ONE o'clock, in about fifty lots, a further portion of the eligible FREEHOLD BUILDING LAND, situate on the turnpike road from London to Brighton, on the slope between Ridgway and the Redhill Station on the Brighton road, adjoining the Royal Oak Inn, and near to the Redhill Station, on the London, Brighton, and South Coast Railway. Nine-tenths of the purchase-money may remain on mortgage or contract at 5 per cent. to be paid in nine years by half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice. Particulars, plans, and conditions of sale may be obtained before the sale; at the principal Inns in the neighbourhood; of Mr. THOMAS BUCKLAND, Chancery-street, Reigate; of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale.

LEYTONSTONE, within five miles of London.—To BRICKMAKERS, CONTRACTORS, BUILDERS, and OTHERS.—Eighteen Acres of valuable Freehold Land, comprising a quantity of excellent brick earth; also a detached Freehold Residence.

MESSRS. C. C. & T. MOORE will SELL by AUCTION, at the MART, on THURSDAY, JULY 9th, at TWELVE, in two lots, TWO PARCELS of FREEHOLD LAND, desirably situate at Harrow green, Leytonstone, with considerable frontage to Harrow green Lane and the turnpike-road. One field (8a.) is secured by existing leases for a long term at a gross rental of 8l. per annum, which renders the land very eligible for brick-making and building purposes. Also a detached 12 roomed residence, Estate Office, and Yard fronting the high road, private to the Park, and a few minutes' walk from the Leytonstone Station of the Woodford Railway, with stable, coach-house, granary, well stocked orchard and garden, in all 2a. 3r. 20p. frontage to the road; let to a tenant at 42l. per annum.—Particulars in plans may in early post be obtained of JOHN OTWAY, Esq. Solicitor, Stratford-grove, E.; at the Inns in the neighbourhood, and at the Auctioneers' Offices, Mile-end-road, E.

BUILDING MATERIALS.

MR. C. F. SMYRK will SELL by AUCTION, on the PREMISES, facing Police-court, near Rye-lane, Peckham, on MONDAY, JULY 6, at TWELVE for ONE, the Lots of useful useful MATERIALS, in long timbers, flooring and lining boards, stone paving, fittings, and fixtures of every description. Catalogues on the Premises, two days prior; and of Mr. C. F. SMYRK, Auctioneer, Surveyor, and Valuer, 18, Newington-place, Kennington-road.

WILLESLEY TIMBER SALE, 1861.—TO BE SOLD by AUCTION by

MR. CHUBB, on TUESDAY, the 7th day of JULY, 1863, ONE HUNDRED and FORTY-SEVEN LOTS of prime OAK, ASH, ELM, POPLAR, and other TIMBER TREES, Cord Wood, Gate and Fencing Poles, &c. now out down, on the Willesley Estate. The actual result will be given. WILLIAM PEAT, the woodman, will show the lots, of which catalogues may be had, of or of the Auctioneer, Ashby-de-la-Zouch. Willesley is one mile from the Ashby-de-la Zouch Station, on the Leicester and Burton Railway. The Auctioneer will thank purchasers to meet him at the Goose Pen Toll bar, on the Moira road, to partake of Luncheon, at TEN o'clock, and proceed to SALE at ELEVEN o'clock.

[*For remainder of Auctions see* p. ix.

COMPETITIONS.

TO ARCHITECTS.—It is intended to erect a GRANITE OBELISK on a public thoroughfare, about 80 feet by 160 feet—"The Parade," at Totnes, in memory of the late Mr W J Assheton Cantiloe. Designs and specifications for the proper purpose may be sent to the undersigned on or before the 24th of JULY, 1863. The cost of the erection of the said obelisk not to exceed £60. A fee will be given for the design adopted.—Further information may be obtained of J. REED, Hon. Sec. to the Memorial Committee.
Totnes, June 24, 1863.

TO ARCHITECTS and OTHERS.—The CHELTENHAM MONTPELLIER GARDENS COMPANY (Limited) has been formed with the object of laying out the MONTPELLIER GARDENS as a place of Public ENTERTAINMENT and Resort, and of ERECTING thereon a BUILDING suitable to these purposes. The Building is required to contain a Hall adapted to Concerts and other assemblies, capable of receiving from 2,000 to 3,000 persons, and communicating with convenient suite rooms. It must also contain a Museum, Library, and Lecture room, and Apartments adjoining the Building, and an Orchestra in the Gardens. The Grounds, which are nearly nine acres in extent, are resting that, and bounded on three sides by public roads. They are at present levelled and turfed, but provision to be left out as Pleasure grounds, the regard being had to the Building before mentioned, and to the preservation of the fine existing trees. The future outlay should not exceed about but a plan which within present expenditure of about half that sum, might be carried out progressively hereafter, without meanwhile appearing incomplete, would be preferred. The Directors being now desirous to obtain Plans for carrying out these objects, hereby offer £50 as a first prize, and £25 as a second prize, for the Plans which in their opinion shall be first and second in order of merit. Each set of Plans to be accompanied by an Estimate, and these for which the prizes are awarded to become the property of the Company. A Working Survey of the Ground may be inspected at the Offices of Messrs WINTERBOTHAM, BELL, & CO. Cheltenham, the Company's Solicitors, to whom any further inquiries respecting the Advertiser next may be addressed. The Plans must be distinguished only by a motto, and must be forwarded to the Secretary, in a closed envelope, directed to Sir ALEXANDER RAMSAY, Bart. Chairman of the Company, on or before the 1st day of SEPTEMBER next.—By order of the Board.
Cheltenham, 24th June, 1863. JOSIAH JESSOP, Secretary.

THE Directors of the Great Central Gas Company will be prepared on WEDNESDAY, JULY 15th, to receive TENDERS and DESIGNS for the ERECTION of an IRON and SLATE ROOF, with glass louvre over workshop 60 feet dimensions, and of building, 93 feet by 21 feet 6 inches.—Further particulars may be had on application to the Engineer, at the Works, Bow Common-street, E.C.

Tenders to be addressed to the Directors, at their Offices, 23, Coleman-

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS. TENDERS are required for the ERECTION of an INFANT SCHOOL and SCHOOL-MISTRESS'S QUARTERS, at Romsiss Barracks, in the county of Hants.
Persons desiring to Tender for the work must leave their names at this Office, between the 9th and 14th of JULY, 1863, during the hours of ELEVEN a.m. and THREE p.m. both days inclusive, and pay the sum of Half a Guinea for the bills of quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor.
The Secretary of State does not bind himself to accept the lowest or any Tender.
Royal Engineer Office, London District, 11, James-street, Buckingham Gate, S.W. June 24, 1863.

MAIDSTONE SEWERAGE.—To CONTRACTORS and OTHERS.—Persons wishing to contract with the Commissioners of the Municipal Borough for LAYING about 2,000 yards of SEWERS with SEWER PIPE into the River Medway, with the necessary Manholes, Traps, gratings, and other Works, are requested to deliver Tenders for the same at the Offices of Messrs. BEALE & HOAR, Maidstone, on or before the 14th day of JULY, 1863. Forms and a specification of the work may be seen at the Office of Mr. BULMER, Maidstone, on and after WEDNESDAY, the 1st JULY. The Committee of Commissioners do not hold themselves to accept either the lowest or any other Tender, and security will be required for the proper performance of the works.—By order of the Committee,
BEALE & HOAR, Clerks.
Maidstone, June 24, 1863.

TO BUILDERS and IRONFOUNDERS.—Parties desirous of TENDERING for the several WORKS required in the ERECTION of the FIRST PORTION of a COMBING ESTABLISHMENT to be built in The Broad-road, Bradford, may see the drawings and specification, and obtain forms of tender, at my Offices, from WEDNESDAY, the 1st, until WEDNESDAY, the 8th of JULY next, on which day Tenders are to be delivered.
E. MILNES, Architect
20, Hall Ings, Bradford, June 24, 1863.

TO PAINTERS, DECORATORS, and OTHERS.—The Vestry of the Hamlet of Mile and Old Town will meet at the Vestry Hall, Bancroft-road, Mile-end-road, on WEDNESDAY, the 8th day of JULY next, at SEVEN o'clock p.m. to receive TENDERS for the DECORATION with INTERIOR PAINTING of VESTRY HALL and OFFICES. The Works are to be done pursuant to drawings and the terms of a specification, which may be inspected, and any further information obtained, at the Vestry Hall, between the hours of TEN and ONE o'clock. The Contractor will be required to enter into a Contract, to be prepared by the Clerk to the Vestry, at the expense of the Contractor, and to give bond of Sureties for the due performance of the Contract. Tenders, conveyed at my Office before THREE o'clock on the Afternoon of the day of meeting. The Vestry do not bind themselves to accept the lowest or any Tender.
THOMAS PRICE, Clerk to the Vestry.
Vestry Hall, Bancroft-road, June 23th, 1863.

CONTRACTS.

LONDON, BRIGHTON, and SOUTH COAST RAILWAY COMPANY.—CONTRACTORS LONDON BRIDGE TERMINUS ENLARGEMENT.—CONTRACTS No. 1.—The Directors of the London, Brighton, and South Coast Railway Company are ready to receive TENDERS for the CONSTRUCTION of a NEW STREET and SEWER, about 350 yards in length, in the Parishes of St. Thomas and St. Olave's, Southwark, and County of Surrey. Plans and specifications of the proposed Works may be seen at the Office of Mr. FRED. D. BANISTER, Resident Engineer, London Bridge Terminus, on and after MONDAY, the 29th inst. and sealed Tenders in the prescribed form only, endorsed "Tender for New Street," must be delivered to the undersigned not later than TEN o'clock in the forenoon of MONDAY, the 13th of JULY next. The Directors will not be bound to accept the lowest or any Tender.
FREDERICK SLIGHT, Secretary.
London Bridge Terminus.

LONDON, BRIGHTON, and SOUTH COAST RAILWAY COMPANY.—CONTRACTORS LONDON BRIDGE TERMINUS ENLARGEMENT.—CONTRACTS No. 2.—The Directors of the London, Brighton, and South Coast Railway Company are ready to receive TENDERS for the EXECUTION of the necessary WORKS required for MAKING the SPACE to be between the existing London Bridge Terminus and a New Street to be formed on the Eastern side of Southwark and Cox's Walk, for the Enlargement of the said Terminus, and comprise an area of about 1,700 superficial square yards. Plans, drawings, and specifications obtained at the Office of Mr FRED D BANISTER, Resident Engineer, London Bridge Terminus, on and after MONDAY, the 29th inst. and sealed Tenders in the prescribed form only, endorsed "Tender for Archive," must be delivered to the undersigned not later than TEN o'clock in the forenoon of MONDAY, the 13th day of JULY next. The Directors will not be bound to accept the lowest or any Tender.
FREDERICK SLIGHT, Secretary.
London Bridge Terminus.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of a CHAPEL, SCHOOLROOMS, &c. at Redruth, in the county of Cornwall may inspect plans and specification at the Office of THOMAS SIMPSON, Architect, Nottingham, on and after FRIDAY, the 26th inst. until FRIDAY, the 24th day of JUNE, and at the Vestry of the United Methodist Free Church, Redruth on MONDAY, the 29th day of JUNE, and SATURDAY, the 11th day of JULY next. Tenders to be delivered at the Offices of Mr THOMAS ROSCROW, Bookseller, Redruth, not later than the 15th day of JULY, endorsed, "Tender for Chapel." The Lowest many Tender not necessarily accepted.

BARTON-UNDER-NEEDWOOD, near BURTON-ON-TRENT. TO BUILDERS.—Persons desirous of offering TENDERS for the proposed ENLARGEMENT, RE-SEATING, and other WORKS at the above Church, may see the Plans and specification, and obtain further information at our Offices, 45, Friar-gate Derby, until the 18th of JULY inclusive, after which no application will be received. The lowest Tender will not necessarily be accepted.
STEVENS & ROBINSON, Architects.
June 25, 1863.

TO BUILDERS and CONTRACTORS.—PARISH of SAINT PANCRAS, in the COUNTY of MIDDLESEX.—Notice is hereby given, that a Joint Committee of the Vestry of the Parish of Saint Pancras and the Board of Works for the Parish of Saint Pancras will on MONDAY, the 13th day of JULY, at the Board-room of the Work-house, in Kingsland, Pancras-road, be prepared to receive separate Tenders from persons willing to CONTRACT for the ERECTION of a NEW LAUNDRY, with Detached Messroom, and of a DINING HALL with Dormitory over, pursuant to plans and specifications to be seen at the Offices of the Board of Works, on and after MONDAY next, the 29th day of JUNE, and at the Offices of TEN and FOUR o'clock, at the Office of Mr. WM BOOTH SCOTT, C.E. Chief Surveyor to the Vestry, No. 10, Edward street, Hampstead-road, where further particulars and forms of Tender may be obtained. The said Joint Committee hereby give notice, that neither the Directors of the Poor nor the Vestry of the said Parish of Saint Pancras will supply quantities of the several Works, or in any way responsible for quantities which may be taken out by any person. Good sureties will be required for the due performance of both Contracts, and the written consent of each Surety must be obtained and filled with each Tender. The Joint Committee do not hold themselves to be bound to accept the lowest or any Tender. Sealed Tenders to be delivered addressed to me, at the Vestry Office, adjoining the Workhouse, Kingsland Pancras-road, on or before TWELVE o'clock at noon, on THURSDAY, the 16th day of JULY.—By order,
FRANCIS PLAW,
Vestry Clerk, and Clerk to the Directors of the Poor.
Vestry Office, June, 1863.

ATHERSTONE GRAMMAR SCHOOL.—TO BUILDERS.—Persons desirous of TENDERING for the BUILDING of the SCHOOL HOUSE, DORMITORIES, and KITCHEN, School Room, and Studio, and Stables at the Grammar School, North street, Atherstone, are asked on MONDAY, 13th inst. Sealed Tenders to be sent to the Architect on THURSDAY, JULY 16th, and the Trustees do not hold themselves to accept the lowest or any Tender, and all necessary particulars to be had of the Clerk to the Commissioners.
Atherstone, June 23rd, 1863. RT. JENNINGS, Architect.

MASBROUGH NATIONAL SCHOOLS.—TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of the NEW SCHOOLS at Masbrough, Rotherham, may obtain lithographed copies of the quantities for the upon making application, by letter, to W. WHITE, Esq. Architect, 32, Wilmington-street, London, W. after the 30th MONDAY, JUNE 29. Plans and specifications may be seen from MONDAY, JULY 6th, at Masbrough, on application to the Rev. H. MASTER WHITE. Sealed Tenders to be sent in by or before TEN a.m. on SATURDAY, JULY 18th, to the Rev. H. MASTER WHITE, Masbrough, Rotherham. The Advertiser does not bind himself to accept the lowest or any Tender.

[For remainder of Contracts see next Page.

CONTRACTS.

LONDON GENERAL OMNIBUS COMPANY, LIMITED.—The Directors are desirous of receiving TENDERS for the CREATION of STABLES at BLACKWALL. Specification may be had on and after the 9th instant at the Company's Works at Bucknall's, the same to be unassigned on or before ELEVEN o'clock on THURSDAY morning, the 9th JULY. The Directors do not bind themselves to accept the lowest or any Tender. By order,
A. G. CHURCH, Secretary.
31, Moorgate-street, 25th June, 1863.

TO BUILDERS.—The Board of Management of the North Surrey District School will meet at the District School, Perge, near the Ashtead Station of the Epsom Railway, on MONDAY, the 20th day of JULY instant, at TWO o'clock in the afternoon, to receive and open and read TENDERS for ALTERATIONS and ADDITIONS to the DISTRICT SCHOOL. Tenders to be sealed and endorsed, "Tender for Alterations and Additions to District School." No Tender will be received after TWO o'clock, nor considered, unless it be made in the form prescribed, and the party or parties tendering be in attendance. Satisfactory securities will be required for the due performance of the Works; and the Board do not pledge themselves to accept the lowest or any Tender. The plans, specifications, and forms of Tender and Contract may be seen, and further particulars obtained, at the Office of the Architects, Messrs. CHURCH & RICKWOOD, William-street, Woolwich, S.E. or on application to the Superintendent at the District School, on and after the 10th day of JULY instant, between the hours of NINE and SIX (Sundays excepted). GEORGE FREDERICK MERRIMAN, Clerk.
Clapham Common, 1st July, 1863.

EXTENSION of STAFFORD COUNTY GAOL.—To BUILDERS and CONTRACTORS.—Parties disposed to TENDER for extensive ADDITIONS to the above building, may inspect the plans, specification, and conditions of contract at my Offices, in Stafford, on and after THURSDAY the 16th day of JULY, until SATURDAY, the 1st day of AUGUST. Bills of quantities will be furnished at a charge of two guineas for each copy, such two guineas being returned to those parties who submit tenders for the works. Tenders, sealed and properly endorsed, to be delivered at my Office by TEN o'clock a.m. on SATURDAY, the 1st day of AUGUST next. Security will be required for the due performance of the contract, but neither the lowest nor any Tender will be accepted unless satisfactory in all respects.
ROBERT GRIFFITHS, Architect and County Surveyor.
Eastgate-street, Stafford, June 24, 1863.

CITY of LONDON.—BARBERS' HALL.—TO BE LET, on a Building Lease, Nos. 33, 34, and 35, Monkwell-street, Wood-street, and a portion of the Court-yard Hall and Offices in the rear.—For particulars and plans, apply to the Beadle, at the Hall; or to the Clerk, HENLEY GROSE SMITH, Esq., Warnford-court, Throgmorton-street, E.C.; or to Mr. C. J. SHOPPEE, Architect, 61, Doughty-street, W.C.

FREEHOLD LAND TO BE SOLD or LET on Building Leases.—Two Acres near Forest hill Railway station; One Acre adjoining Norwood Railway-station; Three Acres at Glengall Grove-road, Old Kent road.—Apply to Mr. MAY, Acorn Wharf, Old Kent road.

TO BE LET, a capital WHARF and DRAWDOCK, known as "Searle's Wharf," most eligibly situated at the foot of New Westminster Bridge, and opposite the Houses of Parliament.
This drawdock has been closed for some years, and is now about to be re-opened.
From its excellent situation and the probability of the Scotland-yard Wharfs being closed at an early date by the Thames Embankment, a very valuable business may undoubtedly be depended on.
A residence is attached, which may or may not be taken with the wharf or drawdock.
Apply to Mr. W. HEWETT, 84, York-road, Lambeth.

BUILDING LAND, UPPER NORWOOD, close to the Crystal Palace.—TO BE LET, for the erection of small VILLAS, a piece of resilence much needed, and certain to let before completed. Advances if required.—Apply to Mr. T. K. GREEN, Architect, 23, College hill, Cannon-street, E.C.

ELIGIBLE BUILDING LAND TO BE LET, on 99 years' Lease, in the best part of Stoke Newington, where houses are in great demand. Brick on the estate, and supplied at a low price.—Apply to Mr. RODDA, Bouverie-road, Church-street, Stoke Newington.

LAND, situate on Bromley-hill, Kent, TO BE LET on Building Lease, suitable for the erection of villas for residence or investment, they being in great demand in that locality. The Land is within ten minutes' walk of the Shortlands Station, and is beautifully well laid out. There are a well, 1 tent and a half of white sand and dry grave, and a supply of very fine spring water.—Apply to JOHN WIMBLE, Esq., 2, Walbrook, E.C.

BUILDING LAND TO BE LET, at Canonbury (Marquess-road), at Lower Norwood, a most eligible site, commanding beautiful views, close to the station; at Croydon, &c. Also, at Edward's road, Bow, some carcases for completion. The usual advances of money if respectable parties.—Apply at the Offices of Mr. J. EDMESTON, Architect and Surveyor, 5, Crown-court, Old Broad-street, E.C.

WOODFORD RAILWAY.—The GROVE, WANSTEAD.—Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. The soil is gravel, and the healthy, and water excellent. The Shenfield-road Station is about only from the Estate, and the City is reached in twenty-five minutes. The Leases will contain a clause enabling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Blackheath, Tottenham, Kingston; some very eligible SITES in the Grove road, Millwall, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 25, Cannon-street.

GUILDHALL, 24th June, 1863.—The COMMITTEE for LETTING the CITY'S LANDS will meet at Guildhall, on WEDNESDAY, the 8th JULY next, at ONE o'clock precisely, to receive PROPOSALS for LEASES of a HOUSE, 22, Tottenham-court-road, a House No. 18a, Rosewell-street, a House No. 20, Old-street, St. Luke's, and a House No. 53, Fair-street, Finsbury.—Plans of the Property may be seen, and further particulars and forms of Tender obtained, upon application at the Architect's Office, Guildhall. FERDINAND BRENCH, Comptroller.

RICHMOND, SURREY.—FREEHOLD LAND TO BE LET for Building, including Mansion to be converted, situate near the centre of the town and railway station. Apply to view at Sutfield House, Paradise-road, and for terms to Mr. W. HULSON, Architect, 19, Bennet's-hill, E.C.

TO BUILDERS and OTHERS.—TO BE LET, on building leases, about 130 ACRES of very eligible FREEHOLD LAND, commanding extensive and picturesque views over Bushey Park and the Thames; near railway station; gravelly soil.—Apply to W. WOOLLINGTON, Esq., 23, Cork-place, Commercial-road, E.; or to Messrs. KENT & SONS, Solicitors, Hampton, S.W.

BUILDER'S PREMISES, HACKNEY.—TO BE LET on LEASE, a capital YARD, with spacious Workshops and Office and with or without Dwelling-house.—For particulars apply to Mr. THOMAS BULL, Auctioneer, 60, Cornhill, E.C.

HOUSE WANTED to PURCHASE, within ten miles of London, in Kent or Surrey, containing eight rooms, with large garden.—Address, Mr. WOOD, Chandos House, Chobham-road, Stratford, Essex.

BUILDING LAND TO BE LET, for the ERECTION of SHOPS and HOUSES, on a main road, within two miles of Charing Cross. Boat, Tax, and rail to City. Advances made. Houses LET before finished. Apply to H. BATES, The Priory, Wandsworth road, S.

BERKS, opposite to the Wellington College, and close to the Railway Station.—TO BE SOLD, 300 acres of FREEHOLD LAND, to which the attention of public institutions and builders is especially invited. The situation high, dry, and particularly healthy. Light soil; the land gently rising; having the advantage of a plantation belt, with important and extensive frontages, and situated on the north of a wood. Brick earth is on the estate; also farm-houses and buildings, which will be found useful.—Particulars and plans, apply at Mr. ROBINSON'S Auction and Estate Offices, 7, Wilton-place, Pall-mall, S.W. where a plan may be seen. The quantity of land would be divided, if required.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land-tax redeemed; conveyance free. Also, PLOTS TO BE LET, on a Building Lease for ninety-nine years. For plans, &c. apply by post, pre-paid, to Mr. FRIBE, Builder, Sutton, Surrey, S.

BUILDING LAND TO BE LET, on lease, situate in the best part of Norwood, within ten minutes' walk of the Crystal Palace, and commercially adjoining the Grove Hill Station. The eligible building ground is suitable for detached or semi-detached villas, which are in great demand. Money can be advanced to builders, if required.—Apply on the premises. For particulars, apply, personally, to Mr. WILLIAM BACKHOUSE, Architect, 42, Southampton-buildings, Chancery-lane, W.C.

BUILDING LAND TO BE LET, at Beckenham, where large houses let or sell before finished. Money advanced, if required.—Apply to Mr. B. PARKS, Lewisham. There are now seven built and occupied.

TO BUILDERS. TO BE SOLD (a genuine concern) a small HOUSE and SHED, with lead flat. Has been for many years the residence of a builder. The yard has been used as a commission yard. The whole, with the goodwill, builder's plant, a quantity of building materials, and lease, of which thirty-four years are unexpired, at the small ground-rent of 2l. 16s. per annum, to be sold for 285l. in consequence of the death of the occupier.—Apply to Mr. CHRISTIAN, House Agent, 4, Commercial place (opposite Jamaica-street), Commercial-road, E. between the hours of Six and Nine p.m.

NEW KENT ROAD, DOVER PLACE. Saint Bartholomew's Hospital.—TO BE LET, from LADY-DAY next, on Repairing Leases for twenty-one years, the HOUSES numbered 17 to 22, inclusive.—For further particulars, apply at Mr. HARDWICK'S Office, No. 1, Henrietta-street, Cavendish-square. Tenders are to be received up and delivered at the Clerk's Office within the Hospital, on TUESDAY, the 14th day of JULY next, at a Quarter before ELEVEN precisely. WILLIAM WILBY, Clerk.
St. Bartholomew's Hospital, June, 1863.

TO MANUFACTURERS, PAPER-MAKERS, and OTHERS.—TO BE LET, or the LEASE SOLD, a first rate MILL and FACTORY, with both water and steam power, spacious buildings, nine acres of land, and excellent plant, situate 5 miles from the London Docks, near to the Thames, and adjoining a railway.—For further particulars and terms, apply to Mr. F. WALKER, Solicitor, Church-lane, City.

TO SPECULATIVE BUILDERS.—A PLOT of LAND, on a main road near Wandsworth, TO BE LET, for the Erection of a Pair of Villas. 700l. to be advanced at five per cent on the work progressed. Sand sufficient on the ground.—For particulars apply by letter to ALPHA, 2, Tavistock street, Covent Garden, W.C.

TO BUILDERS.—Advantageous Opportunity.—LAND TO BE LET, for Semi-detached Villas. Freeholder will make liberal advances.—Address, FRANK COLLINS, Esq., Messrs. Abrahams & Co. 53, Great Portland-street, Cavendish-square.

GILT BORDERINGS for ROOMS, from 1d. per foot. Best and cheapest House in London for every description of Room Bordering, Picture Frame Moulding, and Plate Frames of every description, at the very lowest prices. Re-gilding in all its branches to the trade. Gilt Beads, 7s. per dozen; 6 feet lengths; best ditto, 12s.
GEORGE REES, 57, DRURY LANE,
Four doors from Drury lane Theatre. Established in 1809.

VENTILATION—PURE AIR.

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted in the driest state of the apartment without the draught being felt by the occupants, and as they are placed in the external wall, their action is not impeded when the house is closed for the evening.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 119), Union-street, Borough, London.

SOLID PARQUET FLOORS, ARROWSMITH'S PATENTED, From 1s. per foot, in various woods, inch thick, grooved, oiled, and keyed together, not veneered. For Halls, Staircases, Corridors, Reception-rooms, Libraries, Billiard and Ball Rooms, Picture Galleries, Parlours, Dados, Ceilings Borders to Carpets. Bay Windows, Chancels of Churches &c.

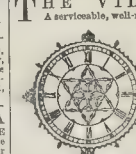
NO SHUTTER BARS.

JENNINGS'S SHOP-SHUTTER SHOE. SHOP SHUTTERS are SHOD and SECURED by the above, at HALF THE COST OF THE UNSIGHTLY AND DESTRUCTIVE SHUTTER BAR. Shops referred to in every public street in London. When ordering the above, send FINISHED THICKNESS of Shutters, and the way they go up.
Sold by all Ironmongers, and the Inventor,
GEORGE JENNINGS,
Sanitary and Engineering Depôt, Palace Wharf, Stangate, Lambeth, S.



DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter from SIR RAYMOND JARVIS, Bart. VENTNOR, Isle of WIGHT.—Second Testimonial:—"March 10th, 1852. In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am confident that it is to be adopted generally in the houses that are being erected here."
N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

POLONCEAU and LIMMER ASPHALTE.

ESTABLISHED 1838

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for paving Stables (as shown above), the absence of paints preventing the generation of ammonia. For Estimates and Prices, &c. &c. apply to JOHN PILKINGTON, 15, Fish street-hill, London, E.C.
Country Builders supplied with Asphalte in Bulk for covering Footings, Barn Floors, &c. with instructions to lay it down.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.
ESTABLISHED 1744.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES, of which he is now making four qualities, and he strongly recommends it in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

TO BE SOLD, Cheap, THREE PAIRS of COACH HOUSE GATES. Size, 8 feet 3 inches by 6 feet 8 inches, by 24 inches. Collinge's patent hinges, solid posts, York stone bases. Equal to new.—T. PENLINGTON, Builder, Gate street, Lincoln's-inn-fields.

TO CONTRACTORS and BUILDERS.—FOR SALE, by private contract, about NINETY TONS second hand CONTRACTOR'S RAILS, about EIGHTY WAGGONS and TROLLEYS, and a quantity of TIP CASTINGS and DOG RAILS.—For price, &c. apply to E. W. JENKINS, 14a, Stamford-street, Blackfriars, S.

A 15-TON CRANE FOR SALE, and all its Fixings. The price is very low, and nearly nominal. The Crane has been used at a Stone Wharf.—Apply at 76, Wapping-wall.

THE PRIZE MEDALS,

LONDON, 1851. PARIS 1855. LONDON, 1862.

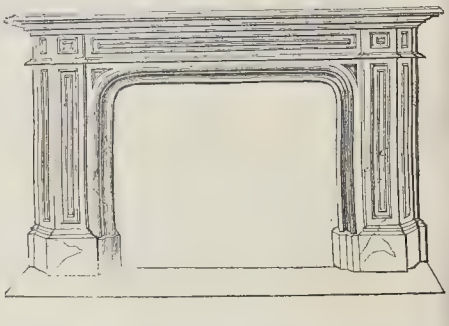
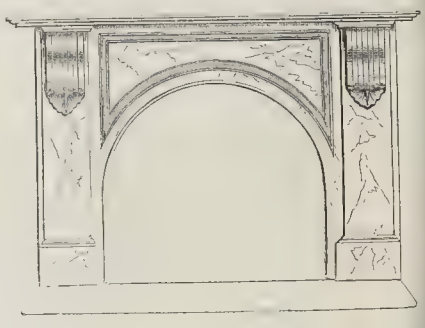
THE RICHEST ASSORTMENT OF CHIMNEY-PIECES

IS AT



WILLIAM S. BURTON'S.

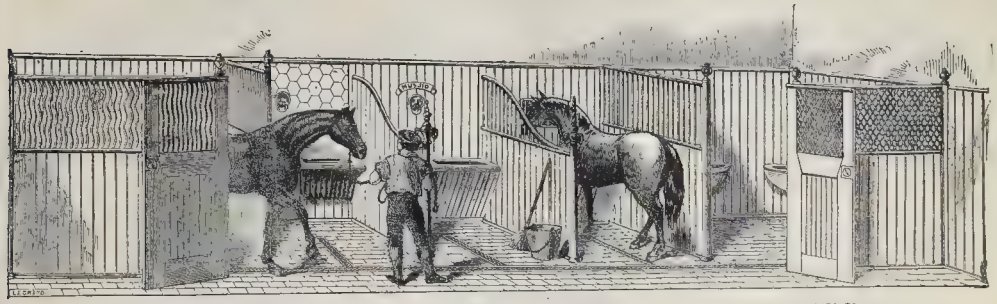
It embraces the following Foreign and English Marbles:—Italian Statuary, Brocatelle d'Italie, Brocatelle d'Espagne, Brocatelle Brune, Griotte d'Italie, Jaune Fleuri, Vert Antique, St. Remis, Black and Gold, Black, Rouge Royale, Vein, &c. &c.; and it includes the undermentioned styles: Renaissance, Louis XIV., Louis XV., Pompadour, Louis XVI., Moderne, à Balustres, &c. &c. Most of the designs are new; while several, from their rich and exquisite sculpture, are veritable works of art. A complete assortment of Enamelled Slate Chimney-pieces is also on show, including many elegant designs. The Prices range from 1*l.* 8*s.* to 100*l.*



WILLIAM S. BURTON,

GENERAL FURNISHING IRONMONGER,

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES,



Sends a Catalogue gratis, and post-paid. It contains upwards of 500 Illustrations of his illimited Stock of Sterling Silver and Electro Plate, Nickel Silver and Britannia Metal Goods, Dish Covers, Hot-Water Dishes, Stoves, Fenders, Marble Chimney-pieces, Kitchen Ranges, Lamps, Gaseliers, Tea Trays, Urns, and Kettles, Clocks, Table Cutlery, Baths, Toilet Ware, Turnery, Iron and Brass Bedsteads, Bedding, Bed-room Cabinet Furniture, &c. with Lists of Prices and Plans of the TWENTY LARGE SHOW-ROOMS at

39, OXFORD-STREET, W.; 1, 1A, 2, 3, and 4, NEWMAN-STREET; 4, 5, and 6, PERRY'S-PLACE; and 1, NEWMAN-MEWS, LONDON.

ESTABLISHED 1820.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, WITH RACK AND WATER-TROUGH,

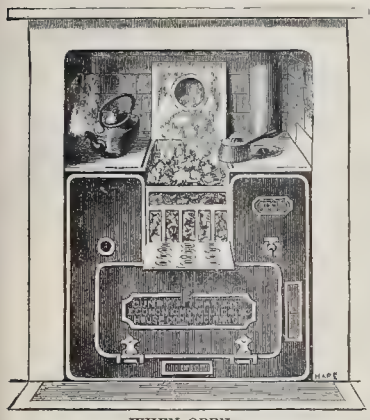
The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

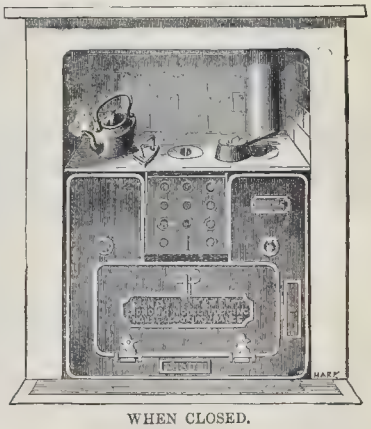


EVERY DESCRIPTION OF STABLE FURNITURE.

ILLUSTRATED LISTS ON APPLICATION TO

ST. PANCRAS IRON WORK COMPANY.

OLD SAINT PANCRAS ROAD, LONDON, N.W.



CUNDY'S MULTUM IN PARVO ECONOMIC POOR MAN'S KITCHENER.

WHEN OPEN.

These drawings represent a Stove of the following dimensions:—24 inches long, 24 inches high, and 15 inches deep, when used as an open fire-stove, and also when closed, for BAKING, BOILING, and IRONING. The oven, which is placed underneath the fire, is 18 inches long, 14 inches deep, and 11 inches high. The flue passes all round the Oven, and the Boiler will contain six gallons of water. This Stove, which is also made 30 inches long, 26 inches high, and 15 inches deep, is admirably adapted for BACK KITCHENS, as an auxiliary Cooking Stove, and for STILL-ROOMS, NURSERIES, and SMALL HOUSES, the consumption of coal being only 112 lbs. per week. This Stove, also Cundy's Patent BRICK OVEN Double Fall-down Bar KITCHEN RANGE; also Cundy's Warm-Air Ventilating Stove, suitable for CHURCHES, HALLS, STAIRCASES, and SCHOOLS, for which invention Mr. Cundy received the SOCIETY OF ARTS MEDAL, also a Medal from the Royal Commissioners of the GREAT EXHIBITION of 1851, can be seen in operation daily, at the Show-rooms of

THE MANUFACTURER,

WHEN CLOSED.

New York Store—83, John street.

INTERNATIONAL EXHIBITION, 1862.—CLASS 31.—PRIZE MEDAL AWARDED FOR

BARTON'S PATENT STABLE FITTINGS

AND ENAMELLED MANGERS.

These SUPERIOR CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

J. BARTON solicits attention to his newly-erected PRACTICAL STABLE, now on view at the Manufactory, 370, Oxford-street, where an extensive Assortment of all kinds of Stable Furniture, upon the most modern and improved principles, is to be seen.

A new Illustrated Catalogue, with numerous engravings of the improved method of fitting up Stables, forwarded on receipt of four stamps

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

DEVAUX'S VIEILLE MONTAGNE

THICK ROOFING ZINC.

This invaluable metal, if laid by Mr. TYLER on the new principle introduced by J. EDMISTON, Esq. F.I.B.A. will last as long as lead, at one-third the cost.

For Prospectuses, Samples, Models, and Estimates of Works to be done with the Roofing Zinc, in large or small quantities, in Town or Country, apply to

Mr. J. W. TYLER, OFFICE—12, ABINGDON ST.; WORKS, 4, WOOD-ST. WESTMINSTER, S.W.

If the Metal is laid by Mr. TYLER, who has become so well known among Architects and Builders, superior and careful workmanship may be depended upon, as a guarantee given for its durability, if the woodwork is prepared according to directions given.

BROWN & GREEN'S

PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and the large ones, fitted with Bath and Steam Apparatus, &c. form the most complete appointment for large establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

81, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept 6, 1862.

THE LONDON

WARMING AND VENTILATING COMPANY,

LIMITED,

26, GREAT GEORGE-STREET, Westminster, S.W.

MANAGER, MR. WOODCOCK.

Churches, Greenhouses, Offices, and Buildings of every description warmed by means of a modification of the plans successfully used during the last five years by Mr. Goldsworthy Gurney in both Houses of Parliament.

Steam, Hot Water, Gas, and in open or enclosed fire-places, Coal and Coke, are equally available for the process.

The cost is less and the effect greater than that of any other known Plans.

The Horticulturalist will find herein an instrument of new and important powers.

The Apparatus may be seen in operation in ST. PAUL'S CATHEDRAL, the various offices of the "Department of Science and Art," and at the Architectural Societies' House, 9, Conduit street, Regent-street

Particulars and testimonials forwarded on application.

GREAVES & KIRSHAW, WARWICK, and 14, SOUTH WHARF, PADDINGTON, W.

L. M. TATHAM, Agent.

THE ONLY WHARF IN LONDON WHERE NO OTHER LIME THAN BLUE LIAS IS KEPT.

Delivered to any part of London, direct from the Works, by boat, rail, or cart, and to every part of the Kingdom by canal or rail.

HALKIN HYDRAULIC LIME,

manufactured by LLOYD JONES & CO. Halkin Works, Holywell, N.W. the same as used in the construction of the Liverpool Docks, &c. and so long celebrated for its strong cementitious and concreting powers for subaqueous masonry, can be supplied by rail or water to any part of the kingdom, either in lump (loose), or ground and in bags and barrels. The Largest may be had in full cargoes, also L. J. & Co.'s Roman Cement, in barrels, which is of a very superior quality, and warranted pure. Orders to be accompanied by a banker's reference.—Apply to the Works, or to F. & W. AARON, Agents, 98, South John-street, Liverpool.

COLES, SHADBOLT, & CO.

CEMENT MANUFACTURERS, LIME BURNERS, BRICK MAKERS, SLATE, TILE, DRAIN-PIPE, HAIR, LATH, and FIRE GOODS MERCHANTS,

ST. JAMES'S and THORNHILL WHARFS, CALEDONIAN ROAD, LONDON

ROMAN CEMENT made at the above works may be had fresh from the kilns, a great advantage to dealers and sewer contractors, especially in winter time.

PORTLAND CEMENT, of the best quality, strength, and colour, manufactured at Kent. This cement will carry more sand than any other cement, and will be brought into the market at a low price.

PLASTER OF PARIS, both coarse and fine, of very superior quality and fresh made.

LIME.—Grey Stone, Chalk, and Blue Lias Lime, well burnt, by the barge or truck, and may be had fresh ground daily, by steam power, for concrete.

BRICKS from our fields in Kent, by the barge alongside, in the river or canals, or by cart from the above wharf, of good quality and moderate price.

A large Assortment of Glazed Stoneware Drain-pipes, Yorkshire Plain, Pan, and Paving Tiles, Hair, Laths, Chimney-pots, &c. always kept in stock.

BRICK-FIELDS, LIME WORKS, CHALK, FLINT, AND BALLAST WHARFS,

VIEILLE MONTAGNE ZINC.
THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4l. per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.
OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.
For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to
THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

KELLY'S PRACTICAL BUILDERS PRICE-BOOK; or, Safe Guide to the Valuation of all kinds of Builders' Work; with the Modern Practice of Measuring and Valuing of the New Building Act for regulating the construction of Drainage. Revised and Corrected by New Calculations upon the present Values of Materials and Labour. Arranged by an Architect of experience, assisted by several experienced Measuring Surveyors. Illustrated with many Engravings and Diagrams. Wanted a Royal 8vo. price 8s. neatly bound.
London: published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Books-sellers.
Of whom may also be had, New Editions of the following Works:—
1. PETER NICHOLSON'S PRACTICAL CARPENTER, JOINER'S, and CABINET MAKING, Revised by TREDGOLD: being a new and complete System of Lines, for the Use of Workmen; founded on Geometrical and Mechanical Principles. Ten parts at 3s. or in boards, 30s.; containing upwards of 120 Steel Plates, and numerous Wood Diagrams.
2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING (revised by TREDGOLD), both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the Use of Workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries, &c. &c.; and a description of the various materials employed. Ten Parts at 3s. or in boards, 30s.; containing upwards of Ninety Steel Plates and Numerous Woodcuts.
3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE: containing plain and simple Rules for Drawing and Executing the several Parts; including Lectures on Perspective, Light and Shade, and Colouring, as applied to Architecture. Illustrated by upwards of One Hundred Steel Engravings executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s.; or in boards, 36s.
4. DESIGNS for COTTAGE and VILLA ARCHITECTURE, containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. BROOKS, Architect. Ten highly-engraved on steel, with Directions for Building, and the estimated Cost of each Edifice. Twelve parts at 3s.; or in boards, 3ls.
5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views, and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other buildings for public purposes. By S. H. BROOKS, Architect. Beautifully engraved on steel. Ten Parts at 3s. or 32s. boards.
6. THE HOUSE DECORATOR and PAINTER'S GUIDE: containing a series of Designs for Decorating Apartments with taste, and suited to the various styles of Architecture. By JOSEPH W. and A. ARROWSMITH, House Decorators to her Majesty. Ten Parts, at 3s.; or in boards, 32s.
7. THE HOUSE PAINTER, or DECORATOR'S COMPANION: containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Colours, the Laws of Harmony and Contrast, the Manufacture of Pigments, Oils, Varnishes, &c. By W. M. HIGGINS, Esq. Accompanied by actual specimens of Mr. Bish's Graining and Marbling. Ten Parts, at 3s.; or in boards, 32s.
THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By LUKE HERBERT, Civil Engineer, &c. Thoroughly revised by Mechanical Science has devoted to any of the important features since the first publication, in 1839, of the Encyclopædia. The Inventions and Improvements recently made have engaged the sedulous attention of the Editor; for, as the value of each work treated upon depends, whether in descriptive matter or wood engravings, upon the selection of new articles, it is also in the revision of old ones, that each can be now become systematically enriched; so that it may be rendered fully worthy of possessing the distinguishing title of Engineer and Mechanic, adapted to the wants of Practical Men." In two Vols. 8vo. volumes, cloth, price 30s.

Now ready, 10s.
THE LAW of COMPENSATIONS, by Private Agreement, under the Lands Clauses Acts, with Decisions, and all the Forms.
By CHARLES WORDSWORTH, Esq. Q.C. Counsel to and Associate of the Institution of Civil Engineers.

Sole Agents, HEINTZMANN & ROCHUSSEN, 9, Friday-street, E.C.

The Builder.

VOL. XXI.—No. 1065.

Gateshead Town Hall Competition.

IN many respects this has been a remarkable competition; not the least curious part of it being that only eleven architects out of the host in the United Kingdom responded to the invitations to compete. The offer of 100*l.* premium for the best design of a town-hall, and 50*l.* for the second best, advertised in our columns, induced Edinburgh, Belfast, Leeds, Sunderland, and Gateshead, to send a single design apiece: Newcastle contributed seven designs, two of them being the work of one architect · the metropolis and other large towns gave no heed. One of the reasons of this paucity of response consisted, possibly, in the vagueness of the conditions of competition. These were (together with a plan of site) to be obtained by payment of five shillings. They covered a page of foolscap; but failed to give two important pieces of information,—the scale on which the designs were to be drawn, and the sum of money to which the probable cost of the building was to be approximated. These points were left open. The consequences of this are, that the designs are drawn to various scales, and that the estimates range from 8,000*l.* to 25,000*l.* Three of the designs are estimated at 15,000*l.*; one at 8,700*l.*; two at 18,000*l.*; one at 9,500*l.*; one at 19,000*l.*; two at 25,000*l.*: thus between the highest and the lowest there is no less a difference than the goodly sum of seventeen thousand pounds. The drawings are placed for exhibition in the council-room of the existing town-hall, Gateshead. They are severally labelled with the names of the respective competitors, and the estimated cost of each design.

The site at the disposal of the council consists of an irregular oblong strip of land, wider at one extremity than it is at the other, now strewed with ruined buildings, and with the rubbish that so frequently accumulates upon building sites in towns. One end of it faces a sloping main street, called West-street; the other, a less acclivitous street, called High-street. Of the two long sides, one skirts the back yards and backs of houses in Nelson-street; and the other the fronts of a long row of small houses, called Swinburne-place. It will be seen that three sides of the site are bounded by the fronts of streets. It must be also mentioned that the council intimated in their conditions that a part of the High-street end of their space might hereafter be appropriated for the purpose of a covered market; and they directed that the principal front of the town-hall should face towards West-street.

The accommodation required by the council comprised a council chamber (area about 1,000 superficial feet), two committee-rooms (area of each from 300 to 400 superficial feet), a mayor's chamber, offices of the town clerk, a suite of three rooms, a muniment-room, offices of the town surveyor (two rooms), offices of the town treasurer (one room), office of the chief constable (one room), a police office, at least six prisoners' cells, which must be above the level of the ground, a police court (area about 1,200 superficial feet), a magistrates' retiring-room, offices of the clerk to the magistrates (three rooms), a court-room for the holding of the county court (area about 1,200 superficial feet), a judge's retiring-room, offices for the officials of the county court (two rooms), a residence for the chief constable (six rooms), a large room suitable for the use of a public body (area about 1,000 superficial feet), nine rooms in connexion therewith, and a public hall to seat 1,000 persons (independent of the platform), with the necessary retiring and refreshment rooms. These numerous conveniences were considered insufficient by some of the competitors, who have added offices for the board of guardians, relieving officers, and overseers; a paupers' waiting-room; an apartment for four fire-engines, public urinals and lavatories, and hustings.

The council, after reducing the designs from which to make a choice to those of Messrs. Thompson, Newcastle; Johnstone, Newcastle; and Lamb, Gateshead, to which that of Mr. Watson, Newcastle, was subsequently added, have selected the designs of Mr. J. Johnstone for the premium of 100*l.* The estimated cost of this design is 8,750*l.* The second premium they have awarded to Mr. J. E. Watson, whose estimate amounts to twenty-five thousand pounds. The total area proposed to be covered by the two designs is by no means so varied in extent as the sum total of the estimates. The first premiated plan covers an area of 220 feet by 120 feet; the second, at three times the price, would cover a space measuring 224 feet by 128 feet. Before going into details we may mention that both these gentlemen have given a parallelogramical plan, leaving the rest of the irregular site out of consideration. Neither of these designs shows any special arrangement to suit the site, and, should either of them be carried out, it will yet have to be shown what the authors intend to do with the surplus. In Mr. Watson's front intended for West-street, there are upwards of 60 feet of frontage left unappropriated; in Mr. Johnstone's there are upwards of 70 feet unoccupied. Nor has either of them kept in view the important condition that a part of the site may hereafter be appropriated for the purposes of a covered market. A third design, effective and complete, by Mr. Lynn, Belfast, makes use of the whole of the breadth of the West-street front, in an arrangement which divides the required buildings into three distinct groups, the county and police courts occupying one, the town-hall buildings proper the second, and the public hall and large room the third. The want of any guide as to probable expenditure has led this gentleman to suggest that either portion of his design could be built without the other, and the remainder at a future time; and to add, with a corresponding vagueness, that they could be built for 15,000*l.* We conclude that the total estimate is referred to, although from this suggested separation of parts it is not quite clear whether this sum, as ticketed to the drawings, is to cover the expense of the whole or part. The fear of exceeding the cost, disregarded by Mr. Watson and Messrs. Adamson & Ross, authors of the other 25,000*l.* design, has suggested a further dismemberment of this design. An imposing campanile ornaments one wing of the front; this it is hinted, "though adding to the effect of the design," could be dispensed with altogether should economy be an object. A thoughtful design by Mr. A. M. Dunn disposes all the buildings towards the Swinburne-place edge of the site, leaving the portion facing the back of Nelson-street laid out in approaches, circular carriage-drives, fountains, &c. Mr. Lamb, Gateshead, considers and covers the *whole* site, showing an actual design for the proposed markets conspicuous to the High-street. Mr. Wardle, as further fruits of the indefiniteness of the conditions, altogether condemns the provision in the instructions for the markets, and states "I am of opinion that the whole of the ground from West-street to High-street would be just sufficient, after deducting what would be required for streets as approaches to the markets and standage of carts to erect a market, without taking any for the purpose of a town-hall, and therefore suggest that after taking off sufficient ground for a town-hall the remainder should be laid out as first-class shops and houses."

The first prize design is founded on the Gothic style. It is two stories in height at the high part of the site, and three stories at the lower side. The plan, as we have said, is a parallelogram. The main front faces West-street; the north front forms one side of Swinburne-place. There are no towers, nor pinnacles, nor buttresses. The triplet windows of the middle story are cusped under acutely pointed openings of a triangular form. Those of the upper story are divided into three lights by mullions, formed of a pillar, the cap of which, midway in the height of the opening, supports the mullions which run into the straight window heads. The only movement is afforded by the centre of the west front, which slightly projects and is higher than the returns, and terminates in three gables, the centre one of which rises higher than and bisects the main hipped roofs. The leading feature of this centre is the council-chamber, lighted by three large windows; from the lower story a small cusped arched portico with an enriched parapet makes a bold projection. Passing beneath the portico, the plan provides a very spacious entrance-hall, or hall of communication, 70 feet by 45 feet—a feature peculiar to this design. Out of this a flight of steps, having a muniment-room under them, gives entrance into a central public hall, 92 feet by 40 feet (exclusive of gallery), 37 feet high); around this centre there is a corridor, and beyond this there is a fair disposition of the various offices. The Swinburne-place front has an entrance affording access to the county court and board of guardians' offices. Beginning with the West-street end of this front there are, first, the three offices for the town surveyor, and then, following one another down the street, the w.cs. and lavatories, the judge's retiring-room, the county court, 42 feet by 30 feet, room for the jury, waiting-room for witnesses, entrance to the offices of this department of the service, the county court waiting and summons office, the private office of the clerk of the county court, the overseer's office and relieving officer's waiting-rooms. On the upper floor above these are retiring and refreshment rooms, and returning towards the West-street end a paupers' waiting-room, relieving officer's room, and a board of guardians' room over, and as large as the county court, 42 feet by 30 feet. On the side facing the backs of the houses in Nelson-street, where there is space to make appropriate approaches, there is the residence of the chief constable and entrance to the police court offices. Ranged on this side, then, on the ground floor, are, coming down from West-street, first the offices of the magistrates' clerks, then retiring-room for the magistrates, the police court, 42 feet by 30 feet, the witness-room, charge-room, entrance, chief constable's kitchen, public urinals at the corner, three cells for males and three cells for females, and small airing-grounds or yards, 25 feet by 15 feet, occupying the front next High-street. On the second-floor, retracing our steps, is the chief constable's house. All the chamber-doors are on the first-floor landing—three bed-chambers and dressing and drawing room,—an arrangement that is suggestive of pantomimic performances and constantly recurring blunders. Over the charge-room is a place of deposit for stolen goods, and adjacent are the police inspectors' departments; and over the magistrates' retiring-room and the offices of the magistrates' clerks are those of the town clerk. On the same

floor, facing West-street, is the spacious council-chamber, flanked on either side by a committee-room.

The second prize design, estimated at 25,000*l.*, is in the Italian style. It has a much more showy exterior than the first prize, as might be expected from the difference in cost, but is not so conveniently planned. The variation in price is in some measure accounted for by the finish of the estimate, which includes heating. The estimates of Mr. Johnstone include no such completeness; even the vaults, though shown in the plans, under the public hall, with separate entrance thereto, which for the purposes of letting would yield the corporation a good rental, were not taken into consideration. Mr. Watson places his police-court and county court, each 41 feet by 30 feet, to face the intended site of the market. This is an oversight and a consequence of not taking the markets into consideration according to the instructions. A court, of all places, should be in a quiet neighbourhood. The first prize design has an advantage in the plan in this respect. There is a portico to the West-street front, beyond which there is but a narrow entrance into the public hall, placed like that of Mr. Johnstone, in the centre of the plan. It measures 120 feet by 58 feet, by 50 feet high, with sittings on the ground-floor for 1,000 persons, and in a gallery at the High-street end for 224 persons. There is a corridor running round the four sides of the hall, from which access to the different offices is arranged. This corridor is 12 feet wide. The public entrance from the market site to the police and county courts are not much wider—14 feet by 12 feet. The Swinburne-place wing contains cells for prisoners in the basement, with windows looking on to the houses of Swinburne-place. On the ground-floor there are successively offices for magistrates' clerk (adjacent to the police-court), refreshment-rooms, w.cs, ladies' retiring-room, cloak-room, entrance and staircase, chief constable's office, treasurer's room, muniment-room, and town clerk's office. At the corner of West-street, in the upper story in this wing, are the offices of clerks to the magistrates, over the town clerk; town surveyor's offices, respectively 20 feet by 14 feet, and 20 feet by 35 feet, over the treasurer's; then the staircase, serving here as approach to the chief constable's residence, which occupies the space over the magistrates' clerk's and refreshment rooms, upon the first-floor "flat" system. He has five bed-rooms, a sitting-room, 22 feet by 22 feet, and a kitchen, but no scullery. An extravagantly-wide corridor (12 feet) leads to them; and yet the doors of the pantry, kitchen, and sitting-room are so focussed in a small lobby that it will be always difficult to tell which is which. The centre of the West-street front contains mayor's chambers on the ground-floor, and committee-rooms and hustings on the first-floor. The return wing, facing the backs of houses in Nelson-street, contains council-chamber, 48 feet by 21 feet, at the West-street corner; committee-rooms adjacent, ladies' retiring-room, and cloak-room; county-court offices on the ground-floor; and large room for public bodies, 48 feet by 21 feet, and seven offices adjacent, on the first-floor. The exterior of the centre of the pile next West-street is ornamented with a lofty octagonal lantern tower surmounted by a domed cupola, with pyramidal spire rising from the centre. The wings and centre of all the fronts of this design are advanced. The basement on the Swinburne-place side is rusticated with square windows, and over this, round three sides of the building, are two rows of imposing round-headed windows and a costly arrangement of a Corinthian column between each, and at the angles of each advanced wing. Each angle has a low Mansard roof ornamented with metal cresting.

The hasty sketches by Messrs. Adamson & Ross, drawn to a very small scale, indicate a building that is estimated to cost 15,000*l.* Like the larger number of competitors, these gentlemen place their buildings rectangularly, by which arrangement a great portion of them would be out of sight in the perspective of West-street to passengers until they were close upon them. In other respects the design differs materially from other plans. The large room, 46 feet by 22 feet 6 inches, and the public hall, 80 feet by 55 feet (100 feet with gallery), and the council-room, 39 feet by 27 feet, face West-street, from which they have convenient access by portico and entrance-hall,—the large room being placed in the direction of Swinburne-place, and the large hall on the opposite of the entrance. By this means the length of both room and hall is fully seen. The hall is made a conspicuous feature. It has a very high-pitched roof, perforated with small dormers like the Hôtel de Ville of Louvain, and is furnished with a tall square Venetian tower and spire, around the base of which there is a superabundance of gables and gablets. In the interior, it is plastered to the shape of an acutely-pointed Gothic arch throughout. There are two galleries to the hall, one of which projects from the wall very high up to the apex of the pointed ceiling. The windows and details generally are of good Domestic Early Gothic detail; but the windows of the council-chamber are of a character akin to cloisters. The authors have made a mistake in sending into the competition sketches so flimsily drawn, which, however meritorious as to design, bear no comparison with the elaboration of other designs.

The design of Mr. Lynn, Belfast, estimate 15,000*l.*, adopts a contrary arrangement to those to which the prizes have been awarded. It is very conscientiously worked out, and exhibits much thought and labour. Mr. Lynn gives a picturesque perspective in brown ink, in which there are two small towers in view besides the campanile, high-pitched roofs, a great deal of pointed arched arcading, a louvre, oriels, and porticoes, with diminutive arcade work for the parapets. There is a free use of arcading in other parts; and arcades in the basement of the campanile stepping up with the stairs, forming a constructional ornament. The plan is irregular, and follows the peculiar line of site. A main defect lies in the fact that the great hall, 109 feet by 56 feet, is neither brought into view nor made a central feature. What appears to be the hall, with high roof, louvre, and oriel in the West-street front, is only the council-chamber. The hall is buried against the backs *and windows* of the houses in Nelson-street. In this position, access can only be gained by a corridor 100 feet long and 17 feet wide. There are two entrances in Swinburne-place, the first leading to an entrance-hall, from which some of the offices open; the second affording facility to the police and county courts. The chief constable's house is placed at the farthest point possible from the courts, being made a prominent feature at the upper end of the West-street frontage, which can scarcely be looked upon as a convenient arrangement.

The design by Mr. A. M. Dunn, Newcastle, estimated at 15,000*l.*, is also thoroughly and carefully worked out. He makes two main fronts, one to face West-street, the other the backs of the houses in Nelson-street, between which and the building he places the carriage-drives, and ornamental grounds and fountains before mentioned. The police court, 46 feet by 30 feet, and county court, 50 feet by 30 feet, are in this plan both placed in the Swinburne-place front, where they would be open to the same objection as if adjacent to the markets—noise, more especially as the position of the proposed frontage limits the width of Swinburne-place to 25 feet. The same objection must be made to the placing of the way in and out for four fire-engines in this narrow street. The main hall here, 100 feet by 50 feet, occupies the centre of the front, facing the back of Nelson-street; but, being set back and on the ground-floor, and not of a conspicuous height, will be lost in the perspective from the main streets. In the interior it is elegant, though severe-looking, having ribs panelled on edge, and the interstices flat panelled. The muniments are better disposed here than in any design, being placed in a light and dry place,—a tower. The perspective view of the design loses much of its effect from being treated as a cartoon in pencil. It shows to the West-street front a tall tower, with massive corbelled parapets at the base of a spirelet, an arcaded recessed portico, and the principal front of the county court, with council chamber, 50 feet by 30 feet, over it, lighted by a very large bow window. The fenestration of the main hall consists of double lights, of a Venetian type, under round arches.

Mr. John Lamb, Gateshead, has a comprehensive design, estimated to cost 14,600*l.*, of a neat Italian character. This plan may be called quadrangular, having for its High street end the covered markets alluded to. The centre of the plan is a quadrangle, or open court or street, entered from West-street under arches through the main front, providing thus a direct thoroughfare from West-street to High-street. Around this open space are grouped the buildings required. The hall occupies the length of line down Swinburne-place. The town-hall offices are kept to the high end of West-street, and the police and county courts, with their necessary suites of offices, are placed to face the back of Nelson-street, though approached from the inner quadrangle. This is the only design that thoroughly considers the question of a market with the site. It makes the market a particular consideration, and shows a central tower over it, that would appropriately face High-street. But there is a drawback to this otherwise careful design in the spot selected for the public hall, assembly-rooms, and rooms in connexion therewith;—these features would be lost in Swinburne-place.

It would be impossible to urge the objection to the 19,000*l.* design of Mr. C. N. Anfield, Leeds, that it looked like a row of shops or houses, or a club-house, or like anything else but a public building. The centre of the principal front is formed by a large costly tower, covered by a cupola, which would amount in execution to as much as all the rest of the buildings put together. From this centre there are wings, the ends of which are advanced, and finished with tall Mansard roofs, ornamented with lofty metal crestings and very heavy ornamental *fleur-de-lys* lead-hips. There are heavy and expensive parapets, besides sculpture, a double row of quatrefoil panels, with carved corbels and columns to swell the cost. In this plan the police and county courts are placed in the West-street front wings, just described as terminating in Mansard roofs. The chief constable's residence is placed to face the site of the future markets. The hall, as in other parallelogramical plans, is in the centre, surrounded by a corridor, lighted by skylights, with the various rooms for public bodies and refreshment on one side, and the council chamber and refreshment on the other. The elevations are bold, but heavy; and expenditure is lavished in unnecessary ornamental features, which would tend to curtail the provision of necessary accommodation.

Mr. M. Thompson, Newcastle, in his two designs has made two very different arrangements: they both differ from those of any other competitor. In his design, estimated to cost 8,000*l.*, in good Italian, he cuts the site up in this way:—There is a block of building, with a central tower, to face West-street, with a police-court adjoining it, in Swinburne-place, beyond which there is an open court. Behind the houses in Nelson-street, isolated from the Swinburne-place side of the site by a large open court, stands a sort of basilica—this is the great hall, 96 feet by 48 feet. The entrance to this hall is on the same side of the front: it is approached by a flight of steps. Beneath, this design places a large room under the High-street end of the hall, and divides the remainder of the basement space into nine rooms, marked one after another, room, room, room; all of which open into a central corridor. There is an alcoved end to the hall, an idea which is repeated below, and again to a large refreshment-room adjoining the hall to match; as well as in this author's second design. Perhaps for an estimate so much lower than the average we ought not to expect much elaboration of convenience; but we are certainly struck with the poverty of arrangement that gives access to the police-court from the public stairs, with no lobby or antechamber, in which persons interested in what was going forward, but still having no particular place assigned them, could wait. Mr. Thompson appears to have been in some uncertainty as to the apportionment of the different offices, as some of the original names have been altered. The office for the county court officials is corrected in pencil to magistrates' retiring and spare room; the hall-keeper's room has been likewise subsequently assigned to the county court officials.

The second design by this author, seen from West-street, is three distinct blocks of buildings. They are only associated together with the proposed ironwork and gates in front of them, and proposed fountain in central space. Standing in the centre, in the distance, is the front of the hall, with side galleries to seat 1,280, with its separate entrance. Close to the West-street, at the extremities of the site, are the other two blocks; one being the police-court, with cells under, and offices for chief constable; the opposite block being the county court, with council chamber, treasurer's office, and town clerk's. The isolation of these blocks, with their separate entrance, necessitates communication one with the other only by traversing the open air spaces between. The spaces surrounding the other three sides of the hall are allotted respectively to butchers', butter, eggs, and vegetable market. Below the hall the public room and nine consecutive rooms are placed, as in the former plan. The style is a mixture of Gothic and Renaissance.

Messrs. J. Moore & Sons, Sunderland, have treated their design, estimated at 18,000*l.*, as a Rath-haus or Hôtel de Ville of continental association. In the centre of the front rises a lofty, slender tower, the base of which, approached by broad steps, forms a porch. On either side from

this centre depart uniform blocks of buildings, perforated with large pointed arches, with rims in coloured bricks, filled with single sheets of glass. The end of the roof is finished with an odd pinnacle or flag-staff, supported by flying buttresses. This design is set rectangularly on the site. On entering beneath the tower by a lofty flight of external steps, visitors would find themselves in front of a long corrider, terminating in a transverse corridor, in which they would probably be lost, as doors of all sorts of courts and offices communicate directly with it. Laid across the site beyond this corridor is the great hall, 168 feet by 60 feet, with gallery at both ends: the only design which has placed the hall in this position. Both hall and courts have semicircular ceilings; and there is a further novelty in an odd arrangement of a narrow open court between the hall and other municipal buildings, showing external girders intended to resist the thrust of the hall roof. The different departments of the service are thus disposed:—The county court and offices and treasurer's offices are kept on the right hand of the entrance; the police-court, with chief constable's dwelling, office, cells, and other police requisites, on the left hand. The refreshment-rooms are at that part of the site that would face the cattle market, if the council had determined to be instructed by Messrs. Moore. The principal drawing in the elaborate set illustrating the designs is a highly coloured *elevation*, with figures and waggons in the foreground in perspective. Messrs. Moore appear to have been afraid to venture upon perspective for illustrating their buildings.

Mr. Wardle's design, estimated at 15,000*l.*, is suited to the site; that is to say, the frontage follows that of the line of roadway in West-street. With that exception the arrangement is not very dissimilar to the prize plans, although not so convenient. There is a hall with side galleries, end gallery, and upperside platforms in the innermost centre of the blocks of building, and around these are grouped the smaller requisites. The county court and council-chamber are placed at the west end; the police court and constable's residence at the market end; the Swinburne-place and Nelson-street sides are occupied by the various offices. Mr. Wardle shows his hall towering above the other buildings, with a series of thirty-two round-headed windows lighting it. At the four angles of the fronts of the building are square advanced wings, ornamented with stone balustrades; iron balustrades also surmounting the heavy cornice of the great hall. There is also a profusion of Corinthian columns, very heavy cornices, and ill-shaped vases and chimneys.

Mr. T. Reay's plan for 18,000*l.* is probably that of a very junior professor of the art, who should learn to walk before he runs. We need only mention that he shows a heavy stone Gothic spire coming out of the slate roof over the town clerk's office; and that scoffers might say his design is in the Batty Langley style.

There cannot be two opinions about the general excellence of the designs. There are certainly but few of them; but they are, for the most part, of more than average merit: the evident work of men who each thought himself likely to be the successful competitor. The council may blame themselves for any discrepancies they may find. It would, perhaps, be difficult to offer a better digested plan than that to which they have accorded the first premium; while, on the other hand, if they have the requisite funds, it would be unwise to adopt the elevations without further consideration. It is very seldom that a public opportunity occurs of setting a standard and making an improvement. In the present instance, after the number of suggestions the council have obtained, and the two plans they have absolutely purchased for the modest expenditure of 150*l.*, it would be unpardonable if the building were not in every way worthy of the town. At a council meeting held on the 9th ultimo, it was resolved that the town clerk should be instructed to require Mr. Johnstone to furnish them with additional proof that the design submitted by him could be executed for the sum named; and that a similar communication should be addressed to Mr. Watson.

ARCHITECTURE AT UNIVERSITY COLLEGE.—At the distribution on July 1st, the following obtained prizes:—Architecture.—Fine Arts.—1st year, 1st prize, R. Groom. Fine Arts.—2nd year, 1st prize, H. Wood. Construction.—1st year, 1st prize, G. J. Taylor. Construction.—2nd year, 1st prize, J. T. Edmeston. Civil Engineering.—1st prize, F. N. Thorowgood.

SOME NOTES FROM FRENCH TOWNS.

Boulogne-sur-Mer.—The bathing establishment having been found too small for the constantly increasing visitors, the municipality have erected one of great solidity, and on a much larger scale. In appearance it has some similarity with the Duke of Buccleuch's new mansion, at Whitehall, with high-pitched roofs at the four angles. A dyke was formed in front, as it is built more in advance to the sea than the former, but it was broken down in a violent storm last February. In spite of all the engineering contrivances, the port continues to fill up with the sand brought down from the hills by the river Liane. A *guide d'eau*, as it is called, is shifted in the other harbour, with a view of cleansing the channel. It is a wooden contrivance, of a series of triangles at intervals, on a long beam, and proves of very little use. There is also just adopted a floating dredger, worked by steam, which is hoped to become useful. A great dock is in progress, on the south or Capecure side of the harbour, about 1,000 feet in length, 300 feet in width, and 30 feet deep, with sluices to retain the water, so that ships may always remain afloat. But the funds given by Government are so insufficient, that it advances very slowly. It is said to be capable of containing at least twelve large vessels of war. On the sand-hills between this great dock and the beach a battery of six guns is mounted. A dozen more guns are ready to be mounted, making a rather formidable defence to the port. In the town two new churches have been built; one at Capecure, Gothic in style, as the French understand, or rather do not understand it. The other church, on the high road to Paris, is better. There are many good points in it: the style is modern Roman. In the vestibule of the museum there are two old capitals, which were found among some ruins in the upper town. They have each a portcullis and rose alternately. The custode of the museum called the Portcullis a "grille," and said that it was adopted by Henry VIII., to show the natives that he meant to keep them under the "*grille!*"

Calais.—This town remains much the same as it was when the English first flocked over in 1815. Scarcely another dwelling-house has been erected, and nothing having the smallest reference to architectural beauty has been added to any pre-existing building. The railway terminus on the quay is no more than an ill-arranged shed, quite unequal to its important traffic. The east pier has begun to be lengthened to the extent of about 200 feet; and it is said that a fort will be constructed there when it is completed, the great extension of the two piers having rendered the well-known "Fort Rouge" useless for the defence of the port. A new and lofty lighthouse has been erected on the ramparts, to replace the ancient shapeless block near the town-hall, which latter is in a discreditable condition of decay. The famous Hôtel Dessin, in the Rue Royale, has been converted into a public museum, and to some other communal uses. During some repairs in the old church a small doorway was discovered in the wall, which had been plastered up. It is now cleaned, and is in excellent preservation, having a square head over a cinque-foiled arch. The spandrils are filled by a sculptured head wearing a fool's cap in high relief, in one; and a dog's head, similarly accoutred, in the other. On the *place d'armes*, or market-place, the footpaths have been flagged on three sides. In all the other streets the rough paving remains, to the great discomfort of pedestrians.

What was formerly the *Basse Ville*, about a quarter of a mile beyond the town gates, is now become the thriving town of St. Pierre, and owes its extent to the bobbin-lace trade, which was established here about thirty years ago by some Nottingham weavers, who quitted England during the disturbances of breaking the lace-frames by the Luddites. This industry has become here of great extent. Large factories have been built. Upwards of thirty tall chimneys indicate its manufacturing activity.

A very handsome town-hall has been erected. The basement is rusticated. The principal story consists of five windows, with suitable dressings, separated by engaged Corinthian columns, surmounted by a bold cornice, crowned with vases. An English church has been erected, and was opened for divine service early this year. It is presumed to be Gothic, but of a very unsatisfactory design, according to the canons of this style.

Amiens.—A building of pretentious appearance has been erected for the purposes of a museum. The style chosen is Renaissance, but very bare of the ornate details it requires; and the contents of the museum are equally sparse.

The restoration of the façade of the cathedral has nearly reached the base, and has been conscientiously executed. Internally, one of the side chapels has undergone polychromic decoration, but is very unsatisfactory, from its close approach to oil-cloth patterns.

About half a mile from the city are the gravel-pits of St. Acheul, where the worked flints have also been found. The workmen have usually a specimen or more to sell to strangers, for the modest price of half a franc each, besides fossil bones and shells, and generally find purchasers.

Abbeville.—This ancient city has put on a modern face externally, the principal streets having the footpaths paved with flag-stones; but the antiquary must regret the general destruction of the carvings which decorated several houses. They have been wantonly swept away, and nothing has replaced them but plaster. The late A. W. Pugin has recorded in his works the elaboration of these wooden-fronted houses. As every city in France appears desirous of erecting a testimonial statue to a distinguished native, so the inhabitants have found no more important individual than Lesueur, a musician, to honour by a bronze statue. The cathedral, like many other ecclesiastical edifices in France, is shored up internally with massive timbers. Its condition is alarming, and there are no funds to secure it permanently. The French people rely on the Government to do everything: such a procedure as a subscription by private individuals is never dreamt of.

Abbeville has of late become of great interest to geologists, from the gravel beds in the vicinity. They are situate about half a mile beyond the walls, and, as all know, have become objects of intense discussion among the *savans* as to the antiquity of the formation, and of the shaped flints which have been found there. M. Boucher de Perthes, resident in a handsome mansion in the Rue de Minimes, and to whom we referred recently, has for a considerable time collected all that the gravel-diggers have found, and has formed a museum of them, and of many other objects such as engage the antiquary, in his abode. Visitors are freely admitted to view the contents on application. The number of the tooled flints, or "*haches*," is about 1,200, the whole of which M. de Perthes has offered to the Government, and his offer has been accepted.

Orleans.—The cathedral dedicated to the Holy Cross, of which it pretends to possess a fragment, is in a very unsatisfactory condition, and great fears are entertained of its durability for any length of time. The spire on the intersection of the nave and transepts has gone visibly over from the perpendicular—the vaulting of one of the side chapels has been so sadly cracked that it has been taken down and is being re-built—while an immense mass of solid timber framing has been erected under the porch and the towers at the west end. The entire fabric, viewed externally, has a rickety appearance.

Orleans is the city, *par excellence*, of Joan of Arc. She gives her name to a fine newly-constructed street leading from the Rue Royale to the west front of the cathedral. The original statue by the Princess Mary of Orleans is placed in the Museum: a bronze copy of it, presented by Louis Philippe, stands at the intersection of the steps leading up to the principal entrance of the Hôtel de Ville. Another bronze statue of the heroine is appropriately placed at the foot of the bridge on the south side. Here she is in the attitude of rushing forward, sword in hand, carrying a flag in the other hand, as if she were again storming the city. On the Place Martroi she is also honoured by an equestrian statue. On the pedestal the events of her life are displayed in elaborate *bas reliefs*. In a narrow lane, named the Rue Tabourg, a small heavy timber door of ancient date, numbered 35, opens into a passage leading to a court-yard, in which stands a respectable-looking house, occupied by a boy's boarding-school, called the "Pension Vautroy." On entering the "Salle de Reception," a door in a corner being opened, leads up three stone steps into a small apartment called the *Salon* of Joan of Arc. It is pretended that this small room and the one over it were actually occupied by her. The walls of this lodge of a couple of rooms are about 3 feet in thickness, perforated by small windows, protected externally by iron bars. The ceiling is waggon-domed, constructed of stone, and enriched with sculpture, in low relief, of scrolls, masks, and chimeras, of dogs with the heads of serpents, each carrying a nude female. The upper room has a similar ceiling, only differing by having on the shield a boar, instead of a pelican, which is on the shield in the lower room.

The city has still remaining many houses of the

Renaissance period, presenting numerous details of great elegance, internally and externally. Some of these are said to have been the residences of Agnes Sorel, Francis I., and Diana of Poitiers,—the façade of the last has been carefully restored. A new mansion, with elegant details of the same style, has been erected in the street leading from the railway station to the *place d'armes*.

Rouen.—This famous city is full of interest for the artist and architect, although many of its ancient houses have been demolished for the construction of two new and wide streets. One, called the Rue Impériale, is finished; the other, only having the ground cleared, is to be called the Rue de l'Impératrice. Both these streets lead northwards from the river. The iron spire which was erected to replace the one destroyed by fire a few years ago, has never been completed for want of funds; the remainder, about 20 feet in height, is standing in an adjoining yard. In the church of St. Ouen a new pulpit was erected in 1861. It is in the style of the fourteenth century, and is highly creditable to the architect, M. Desmaret. The sounding-board is crowned by an open-work spire, 15 feet high, adorned with statuettes. The entire construction is of oak. The old pulpit was removed, having been the scene of the sudden death of the *curé*, who fell dead while coming down the steps. Workmen are employed in this church in repairing the windows and readjusting the stained glass. The Hôtel de Ville is a modern building, and contains, in the upper story, the collection of pictures belonging to the city, about 600 in number. The staircase leading to it is of grand dimensions, with banisters of cast iron, of elegant design. It winds round the four sides of the space it occupies, and is said, in the guide-books, to resemble the staircase of Somerset House, to which it has small resemblance.

The newly-made street called the Rue Impériale leads from the stone bridge on the Seine to the northern Boulevards. At its extremity here the city and departmental museum has been lately erected. It is rich in relics of antiquity; many architectural remains, of size, are placed in the garden, while lesser ones of statues, busts, and tombs are preserved in the interior. The door of Corneille's house is among its rarities; also a signature of William the Conqueror to a charter; a few fragments of the heart of Richard Cœur de Lion in a crystal box; and some fine stained glass windows of the thirteenth and sixteenth centuries.

The Hôtel Bourgtheroulde is in a most degraded condition: the famous sculptures are dropping to pieces from the effects of the weather, and will shortly be obliterated unless some means of protection are adopted. The house itself is inhabited by various humble persons; a discount office is on the ground floor. These sculptures, if not to be preserved on the spot, would be an interesting addition to the Mediæval antiquities at the South Kensington Museum, and perhaps might be easily obtained. Besides, they are elucidatory of our own national history. The elegant Fountain de la Crosse, in the street of that name, has been entirely restored, with the greatest success, in all its delicate details of ornament and tracery. Bronze statues of Boildieu and Corneille, on handsome pedestals, adorn the Boulevards on the quay. It ought to be mentioned that the beautiful Palace of Justice has been completely restored in its pristine beauty of elaboration.

WOOD CARVING IN ITALY.

A MEETING was held in the rooms of the Society of Arts on the 26th ult., to receive the award of the judges, which we printed in our last. The Council of the Society of Arts do not seem to have given that publicity to the intention that they usually do; and the result was, as we are informed, a very small meeting. Mr. John Bell presided, and Mr. M. D. Wyatt made some observations on the state of wood-carving in Italy and France.

In the course of his observations, Mr. Wyatt said: In comparing the technical arts of Italy with those of other countries of Europe, it was always to be remembered that Gothic art was an importation rather than a creation. The great abbeys and cathedrals of England and France, sumptuously decorated with carved stall-work and screens, had many of them reached a pitch of rare perfection before the Germans transplanted the Pointed style to the North of Italy. The wandering Greeks, who, during the early part of the thirteenth century, were the principal artificers in Italy, unquestionably possessed a power of minute carving in wood which their descendants had retained to the present time, as might still be seen in the curious tablets decorated with multitudes of almost microscopic figures, which were produced in the monasteries of Mount Athos and the Levant. It was not, however, until some time after the revival of sculpture under the Pisani that Italian wood-carving made any conspicuous figure. The most complete set of Gothic stalls he remembered was that which existed in the Cathedral of Palermo. In general style of execution they differed little from contemporary works of the early part of the fifteenth century in the Western countries of Europe. In the mixed style, half Gothic, half Renaissance, much very beautiful ecclesiastical wood-work had been executed, and in the stalls of the Chapel in the town-hall of Sienna, a very remarkable specimen of the skill the Italians had acquired in the combination of wood-carving with marquetry in the early part of the fifteenth century, was to be met with. The stalls of the Church of St. Francis, at Assisi, were little less remarkable. From about the year 1300, a large number of graceful ivory carvings were produced in Italy, proving that in cabinet objects very considerable dexterity prevailed. These differed from the co-temporary works of France and England, mainly in the amount of marquetry by which they were adorned; this art there is no doubt the Italians acquired from their early intercourse with the nations of the East, by way of Pisa, Genoa, and Venice. From whatever source this decorative adjunct might have been acquired, there was no doubt that it tended to greatly enrich the effect of the furniture, and general decorations in ornamental woods, which, from the year 1400 onward, increased and multiplied in the palaces and churches of that nursery of the arts. It was, however, with the great revival of antique art that they must mainly associate the creation of a great school of wood-carving in that country. To Donatello and Brunelleschi must be awarded the honour of having first devoted their attention to the production of real artistic sculpture in wood. Fellow students at Rome, they had together examined all the relics of antiquity preserved in that locality, and, until the later circumstances of his career drew Brunelleschi altogether away from sculpture to the practice of architecture, they executed many beautiful works, more or less in rivalry. The most notable instance of this is recorded by Vasari, who relates that Donatello, having been engaged to execute the crucifix in wood, now preserved in the church of Santa Croce, at Florence, showed it to Brunelleschi, who reproached him with his having made his Christ too much like a countryman. A coolness ensued between the friends; and, in order to vindicate his superior ability, there was no doubt that Brunelleschi threw all his soul into the execution of the still more beautiful crucifix, which was one of the greatest treasures of the present day in the Church of Santa Maria Novella, in the same city. The story ran that, when Donatello went to look at Brunelleschi's work with him, he had his apron full of eggs and cheese, which, on catching sight of the crucifix, he let fall, and, turning to Brunelleschi, said, "Thou art gifted to make Gods; I, countrymen only." Whatever the relative position of the two artists might have been at that early period in their career, there was no question as to the infinite superiority Donatello ultimately attained in every class of his art; and he (Mr. Wyatt) knew no master whose productions were more worthy of study by the wood-carver of the present day. He excelled especially in the art of contrasted relief, and in a consummate knowledge of the effects to be produced upon the quality of shadows by undercuttings, and the use of reflecting surfaces.

No one, since the days of the Romans, whose works he so profoundly studied, had so well succeeded in giving effect in the lowest possible relief. Some of his most remarkable works scarcely exhibited a greater salience in any part from the ground than about a quarter of an inch, and yet, by a careful attention to the delicate undulations of the surface, and knowing exactly where to incise, he had managed to produce an amount of dramatic expression and apparent rotundity which was almost incredible. Happily, through the excellent taste and praiseworthy exertions of Mr. Robinson, the South Kensington Museum now contained an invaluable collection of the works of that artist, and of his most able contemporaries, which could be rivalled in no other country of the world. Among their contemporaries and successors, the most notable in the art of wood-carving were probably Baccio d'Agnolo, the author of the great "*cantoria*" from the church of Santa Maria Novella, at Florence, now in the South Kensington Museum; and Benedetta and Giuliano da Maiano. Because the names of a great number of such artists were not preserved to us, it was by no means to be supposed that there was any dearth of skilful professors of that art, since the multitude of monuments which abound in almost every church, monastery, and palace in Italy, left no doubt, not only of their number, but of their talent and most prolific industry. The objects which their energies were principally concentrated upon were carved doors, screens, pulpits, linings to rooms, fittings to sacristies and shops, such as the "*spezzerie*," or drug stores, attached to many of the principal monastic establishments.

In furniture, two objects were particularly selected for decoration by the wood carver, the one the great chest, or *cassa panca*, in which the linen and many of the valuables of an Italian household were usually preserved, the upper portion of which served as a settle or large seat; the other, the *cassone*, or large chests, in which the trousseau of the bride, and sometimes her dowry, were generally kept. The cabinet was a later piece of furniture, and attained its greatest perfection in the great ebony cabinets wrought with marvellous skill at Venice, in the latter part of the sixteenth century, and subsequently well imitated in France and Germany; one, in the possession of Mr. Holford, in this country, was of the highest order of excellence. For the design of wood-carving as applied to church decoration on a large scale, the ablest artists were employed, while the execution was intrusted to the ordinary makers of furniture, who had their shops in all the principal cities. Thus, at Perugia, might still be seen, in the church of St. Agostino, the carvings in the choir by Angelo Fiorentino, after the designs of Pietro Perugino. These were enriched with the most graceful marquetry. The example of Perugino was followed in the same city by his great pupil Raffaelle, whose arabesques on the stalls of the Church of S. Pietro dei Casinensi, executed by Stefano da Bergamo, were probably the most beautiful specimens of wood-carving now extant in Italy. Michelangelo, too, in his early years, paid considerable attention to wood-carving, and executed a very fine crucifix for the monastery of San Spirito, at Florence, in the year 1493. Although there was little left so pure in style as these, there was an infinite abundance of that which was more florid, but scarcely less dexterous, in design and execution.

The fittings of the great halls in the ducal palace at Venice were admirable examples of this bold design and florid execution, which attained its climax under Andrea Brustolini, while all over the country there were still scattered masses of rococo work, which must have cost vast sums of money, and rarely failed to exhibit a judicious application of the art to architectural embellishment, however faulty in good taste the separate details might occasionally appear to be. The school of Bernini, which, in its florid manner, never hesitated before the difficulties which it presented to the workman in the realization of the fanciful conceptions of the principal designs, no doubt laid the foundation of that overwrought style, which, passing into France, fluttered and twisted in grotesque, but occasionally very beautiful, combinations of form about the principal monuments of architecture produced during the reign of Louis XIV. The French (as well as the Germans, represented in this country by the immortal Holbein) of the sixteenth century acquired from the Italians a much purer and more elegant style, and, in combination of arabesque with well-proportioned mouldings and agreeable conventional ornament, it would be difficult to surpass the bulk of the work produced in the reigns of Francis I. and Henry II.

The doors from the church of St. Maclou, at Rouen, by Jean Goujon, of which he (Mr. Wyatt) was fortunate in procuring casts for the Crystal Palace, would well repay the most careful study on the part of any wood-carver of the present day, since, although much dilapidated, in the general scheme of their composition they left little to be desired. The old dexterity of her artists had not been altogether lost in Italy, since it would be in the memory of those present that the large cabinet produced by Barbetti, of Florence, in the Great Exhibition of 1851, successfully competed with the productions of a similar nature of every other country. At Paris, in 1855, in the late Italian Exhibition, and in that of last year, Barbetti still further distingnished himself, and with Giusti, of Sienna, manifested the fact that under proper direction the Italians at present might fairly rival their great predecessors. Among the contributions from Rome they would no doubt remember a door, beautifully carved and enriched with marquetry, forwarded by the Pope, and intended for one of the apartments of the Vatican. It was his (Mr. Wyatt's) earnest hope that they

might at least imitate the Italians in a more serious use of wood-carving than they had hitherto done.

The very item last mentioned, that of ornamental doors, could but an emulation be excited as to whose house should have the most beautiful in this country, would suffice to give employment to more than he saw around him for many a long year. They might now walk from one end of the metropolis to the other and scarcely see a single recent external evidence of the power which they certainly possessed, and which that exhibition demonstrated, of enlisting wood into the service of architectural beauty. He trusted that the time was not long distant when they would again see that material really used as it ought to be, not simply worked upon the carpenter's bench, but dealt with more artistically in the studio of the wood-carver. If such a result was to be obtained, it was essential that those who practised the art should occupy themselves more with the principles of its judicious combination and arrangement on a large scale, and less with the superficial minutiæ of a pheasant's wing, than they now did. In fact, they must for a time neglect the cuticle, in order to rightly apprehend the structure of the skeleton.

Mr. Lock moved a vote of thanks to the chairman, and to Mr. Digby Wyatt, for their assistance on this occasion. The wood-carvers felt much indebted to the Society of Arts, for the valuable aid they had rendered them in the furtherance of this art.

These votes having passed, the meeting separated.

ARCHITECTURAL MUSEUM OF THE ROMAN TABULARIUM.

POGGIO, commencing his antiquarian studies on the Capitoline Hill, laments: — "Oh, how greatly is *this* Capitol different from that of which our Maro sang—

'Aurea nunc, olim silvestribus horrida dumis,'

so much so that his lines might be suitably converted into

'Aurea quondam, nunc squalida spinetis vepribusque referta.'"

("De Variet. Fortunæ," l. 1.) Looking around him on this spot, the learned Florentine first notices what remained of the Tabularium (record-office, or public archives), which he describes as "arcades of two stories inserted in modern buildings, now a public receptacle for salt;" uses to which this imposing ruin of the ante-imperial period was appropriated for nearly two centuries after Poggio's time, being first cleared out by order of Paul V. Its substructures date from the year of Rome 578; the upper stories, built by Scipio Nasica, from the year 594; and the last repair, or restoration, was by the Consul Q. Lutatius Catulus, B.C. 78, recorded in an epigraph given by the Florentine and by Nardini, who found it extant in the seventeenth century. Notwithstanding all the vicissitudes and even conflagrations from which it has suffered, this edifice exists at the present day in its lower stories, with a portico of eleven archways (all but one blocked up), and the traces, rather than ruins, of a Doric colonnade, still in majestic reality, though indeed much marred by the heavy, common-place buildings of the municipal palace above. When the Mediæval seat of the Roman senate was restored on this site, a work begun in 1405, and completed by Nicholas V. about 1450, these arches were built up, as we now see, in the masonry called by Italian writers *saracenesca*, thrown down, to open a single one of their orifices, about twenty-six years ago. Discovered fragments, and one remnant in its place, show that the colonnade of half-pillars was in peperino, like the rest of this building, with capitals and cornice in travertine, the shafts cut in facets to one-third their height, the upper part fluted. Above was another portico, probably Ionic, of which remain no ruins. The peperino here used, in enormous squared blocks, is of the species from Gabii, called *lapis Gabinus*; and this antique front, bounding the Forum northward with fine effect, as it rises behind temple-columns and triumphal arch, measures 240 feet in length, and 37 feet in height. Several oblong apertures in the lower part of its structure were made in the Middle Ages, to give light to the ground-floor corridor, then probably inhabited; and the walls thrown up in the archways have been pierced by similar windows.

The entire elevation remained long hidden by mean houses, which were not removed till 1839, on occasion of some works for enlarging or improving the prisons located in the Tabularium, which continued to serve as a debtors' gaol till the beginning of the present pontificate. Pius IX. ordered its appropriation for worthier uses,—to become a museum of antique architecture, enriched by all the more valuable remains of the Forum temples. Before this period its interior had been but partially explored or accessible, and various interesting discoveries have subsequently been made in its dim recesses, facilitating a general apprehension of its plans, and justifying the inference that the ancient corresponded in limitations with the modern edifice, which in fact stands on the same foundations. Along its ground-plan extends a corridor in which are concealed the immense buttresses that support the whole weight; and the stairs descending to that interior have been discovered, tolerably preserved, though now no longer accessible. At the same time was found another staircase leading from the upper story to the Forum, and having egress at a portal behind the Temple of Vespasian (or, as some consider it, that of Saturn), probably shut by that emperor's desire on account of its having been the approach through which the Vitellian faction entered the capitol in the assault against Vespasian's party. That portal indeed may still be distinguished in its outline, with an arched head, filled up by masonry, behind the temple's ruins. In that civil conflict, A.D. 69, the Tabularium was fired, its archives burnt, and the principal edifices in the capitol, including the great Temple of Jupiter, consumed. Vespasian placed in *this* building, that seems to have been mainly preserved from the flames (owing to its powerful construction no doubt), copies of the 3,000 bronze tablets, senatus consults, and plebiscita instead of those lost, dating from the city's earliest historic origin; and then ensued the dedication of the new temple to Jupiter, attended with the utmost pomp, and all the ceremonial of ancient worship, as fully described by Tacitus (l. iv. c. 53). A second time destroyed by fire, soon after Vespasian's death, it was again restored, with greater magnificence, by Domitian, the gilding alone at a cost of 12,000 talents,— above $2\frac{1}{2}$ millions sterling. We enter the Tabularium from the western side of the palace under the fortifications of Nicholas V., passing through an antique ingress with horizontal lintel, in the same massive stonework as the front towards the Forum; here indeed partly repaired, though in much the greater part retaining its huge quadrate blocks firm and uninjured by the lapse of nineteen centuries. The long dim-lit corridor we are now admitted into shows the singular effects of the action of salt in corroding its masonry, so that the wall-surfaces resemble strata of rocks, rough and rugged, rather than a structure of stonework. A certain sense of awe is created by the massive architecture, so hoarily antique, the long-drawn perspective, and solemnized tone of this interior. We learn that the corridor where we now stand, on the upper story above the Forum, served for communication between the two *clivi* of the Capitoline Hill, and was therefore paved with polygonal lava blocks, of which Nibby discovered, in 1830, some remnants (see his *Roma Antica*); that the ærarium (or treasury), a public library, and halls for declamation, were connected with this edifice, besides the national archivum for which it specially served.

Before examining the architectural antiques now deposited here, one can scarce conceive of the exquisite delicacy, the elaborate fantasies, and variety of invention bestowed by the Romans on the adornment of their public buildings. Most beautiful among these fragments are the great frontispieces from the temples of Vespasian and of Concord, restored, under the direction of Canina, and with admirable skill, by four marble-cutters, who spent eight years on this task. In the cornice and frieze of the Vespasian Temple the egg moulding is mostly new; the mensolæ (very graceful) are almost entirely antique; the rosettes entirely so, and remarkable in being all different in design as well as unequal in scale. On this frieze are an interesting illustration of the sacrificial worship, reliefs of the several implements and sacred vessels, patina, aspergillum, Flamen's *galera*, &c. The frontispiece of the Concord Temple required a fuller restoration than the other; but is so ably accomplished that, as it stands before us, its effect is of surpassing grace and richness; its frieze having an ornamentation chiselled in parallel leaf-like forms, concave, surmounted by a cornice of acanthus foliage (antique, except one only of the sculptured plants); each pair, in the graceful series, divided by a long upright lanceolate leaf, rather like the aloe. From the Julian Basilica we see a massive plain cornice bearing the words, in large letters, LIVIA UXOR— AUG. MATER—evidently to honour the wife of Augustus, during the reign of Tiberius, her son; likewise from the same ruins, the fragment of a coffered ceiling with rosettes, and a lion's head projecting outwards; a Corinthian capital, restored most carefully from numerous pieces, the upper part only antique, and curious in the detail of a ram (the custode calls it a *goat*), couchant at each angle, to support the abacus. Permission may be obtained from the municipality for copying any of these antiques; and the students of the French Academy have made drawings, we understand, from most of them. The selection and restoring of all this museum's contents were confided to Canina. From this lower corridor we ascend to a higher one, of similar extent, and parallel with this, reached by a staircase whose lowest and seven uppermost steps are ancient, of travertine, the walls and vaulting above being tufo, in small blocks, laid with a good deal of cement, the surfaces left quite rough, as if for incrustation, in hewn stonework. At the summit of the stairs is a finely-built brick archway, the work of Michelangelo. In that higher corridor the masonry is like that of the passage through which we ascend, but adorned by columns now built into brick pilasters, for security; so that we see nothing of the marble incrustation the custode reports about. Hence, through archways fenced by railing, we look into an outer range, a third corridor, also parallel, corresponding to the front of the municipal palace immediately above, and said to be the site where the historic Fasti were deposited. Near the western extremity of the central corridor are the entrances to two chambers and a staircase, discovered in 1850, by Canina. The custode (an intelligent specimen of his class) having been an eye-witness, describes interestingly the scene when the great archæologist, relying on sure authorities, measured by paces the length of the corridor up to this point, where he desired the workmen to begin; and the task of breaking through the ancient walls proved so difficult that fourteen days passed before they could penetrate into the chamber above the stairs. Through the narrow gap then made we enter this quadrate chamber, in profound darkness, and see by torch-light a gaping abyss, where the staircase descends under horizontal vaulting of most massive construction in travertine, similar to that of the walls around us, formed in enormous squared blocks, without cement. This vault is a striking example of the Etruscan style followed by the Romans in their architecture till a comparatively late period; and, when the custode lowers his torch, the effect of the lurid light on that stupendous masonry, the sense of mystery, and the historic associations, so impress, that, on a first visit, it seemed to us as if no other scene in Rome brought before the mind with more vivid reality the tragic catastrophes described by Tacitus, in whose pages is the graphic narrative of the fierce struggle, the principal scene of which is before us,—the assault and taking of the Capitol by Vitellius's soldiers, and the conflagration that ensued. We cannot now descend this staircase; but its foot was reached, and the depth explored, when first opened, on which occasion were found a number of ivory styli, different in shape and size, now in the Capitoline Museum; also several skulls, which were allowed a last resting-place in sacred ground, at the S. Lorenzo cemetery. Another chamber, contiguous and larger, is entered by a breach in these enduring walls, and communicates with the upper flight of the same staircase, of which remains but a trace in the groove that crosses the masonry slanting on one side, and terminates at a doorway, now only traceable in the outlines filled up with stonework. The construction of this larger chamber is in immense quadrate masses of reddish lithoid tufo, without cement, divided at intervals by half-columns in the same stone, now covered with brick for better support; and above these runs a plain cornice of similarly massive character. The vault here is so little elevated above the slope of the stairs, as evidently to have been made after the latter had been cut off, or at least become unserviceable. Platner and Urlicks ("Beschreibung Roms") describe, as seen about twenty years ago, the ruins of small, low chambers, almost filled by fallen material, above the first story of corridors: the origin of these, whether antique or Mediæval, these writers consider doubtful; and the actual site where the Fasti and public treasure were deposited in the Tabularium, they believe cannot be decided. Within late years has been found the epigraph of the consul Catulus, lost since the seventeenth century.

One more attraction of the Tabularium is the view from the archway spread above the Forum, in which all the ruin-groups of that region and the Palatine, with a noble background of mountains,

are presented so strikingly that, familiar as one may be with these antiquities severally, their aggregate here impresses as quite new, and formed into a picture of surpassing beauty. This is, rather than any other, the point for a photographic view of the celebrated centre.

Another Architectural Museum of recent origin in Rome, is far more richly supplied than that on the Capitol, though not alike interesting for the site it occupies, the one filling a considerable compartment of the Sculpture Gallery in the Lateran Palace, founded by Gregory XVI. The specimens of decorative detail, *ornato*, in that collection, from various classic ruins, are of singular beauty, some most delicately elaborated, others remarkable for boldness not less than grace of design. Neither of these museums is yet provided with a catalogue.

The superb temple of Jupiter Capitolinus has left not one fragment of ruin on the high terrace where the Aracœli church has taken its place; but a curtain of brickwork, clothing the steep sides of the Capitol beneath, is a visible remnant of its substructures; and recently some chambers, here opening within the mount from that surface of ancient wall, have been brought more agreeably within reach of inspection, the slope between the northern approach to the Capitol, and the great staircase leading to that church's front (hitherto in the same vile condition to which such waste ground is commonly abandoned in Rome), being now transformed into a pleasant garden, where cactuses and aloes grow, and a fountain gushes in the midst. Four small vaulted chambers of brick masonry, well preserved, are thus more easily visited, opening from this new garden, and only fenced by iron railings; another similar, converted into a workmen's lumber-room, being reached from the Capitoline piazza, and sometimes accessible when a door chances to be left open.

THE TEMPORARY DECORATION OF PUBLIC BUILDINGS.

MUCH money is often lavished upon the festal decoration of public buildings with so little success, that a few words on the most evident causes of failure, according to the views of the writer, may not be out of place. Elaborate attempts at external decoration for daylight effect, combining the profuse employment of evergreens, mottoes, and allegorical paintings in imitation of sculpture, though seeming to promise good results in the hands of a master of the art of holiday ornament, have been made before now to produce almost positive ugliness. They have certainly not been the means of imparting additional beauty to the buildings they were intended to adorn. The same may be said of our attempts at architectural illumination. The night effects have been almost as unsuccessful as the daylight ones; the attempts to light up the exteriors of our public buildings in accordance with their architectural forms having often proved failures in very opposite fashions; in some instances being tawdry, and in others altogether ineffective, and certainly wanting in that brilliancy which should always be the aim in public illuminations.

But it is not intended in the present remarks to discuss in detail the causes of failure in external decorations, either for daylight or night effect: it is to internal decorations that these observations are addressed. It would seem to be only by accident that such efforts at temporary decoration are occasionally successful, as the occasions of even partial success very rarely occur. One of the most common mistakes is the overloading the architectural features of a suite of apartments with unmeaning draperies. This is the almost only method adopted in Catholic countries on the great festivals of the Romish Church, and the result is all the more fatal to the internal architecture of the churches from an awkward attempt to make these dressings accord with the architectural structure of the building. What, for instance, can be more wretched than the effect of the interior of St. Peter's at Rome, when arrayed in all the faded trumpery of scarlet and gold hangings during the performance of some of its more important services? It is easy to imagine what the noble pilasters of that wonderful building, with their beautiful inlays of the richest marbles, must lose by being covered up with long strips of scarlet cloth, rendered tawdry by imitation panellings of tarnished gold lace. Such dressings as these, fitted to each architectural feature, so as to be *tied* on for festive occasions, and folded up and put away for another time when each festival is over, make up a sort of masquerading costume in which it is thought to render this magnificent edifice more beautiful on the different great *festas* of the church of Rome. All attempts to produce elaborate decorative effects by such means, especially when in a set form, to be repeated, time after time, are even more objectionable than the pink and white calico festoonings of our own attempts at giving additional effect to our great halls, or other public buildings, on high days and holidays. It is, however, with a more solid and ambitious class of temporary ornament that I would deal. In the first place, a strong veto ought to be put upon the use of rough and careless gilding. When surfaces have not been properly prepared, the effect produced by gilding is precisely of the gingerbread character, the gold leaf adhering imperfectly, and consequently having that rough but vulgarly gaudy effect which characterises the gilding of pastry or sweetmeats.

Nothing is so effective as gold when soberly employed, and when its artistic application has been carefully and tastefully considered, and its mechanical application rendered perfect by fitting preparation; but nothing is more offensive and coarse than such plasterings of gold or Dutch metal as one meets with in the decorative attempts at country fairs, or that of theatrical scenery when seen too closely, and by daylight. The candle-light effect of such rough gold work is bad enough; but its daylight effect is worse. The haste with which temporary decorations are often carried through may be urged in extenuation of their coarse character; but then, in reply, it may be stated that something of a different class should be attempted.

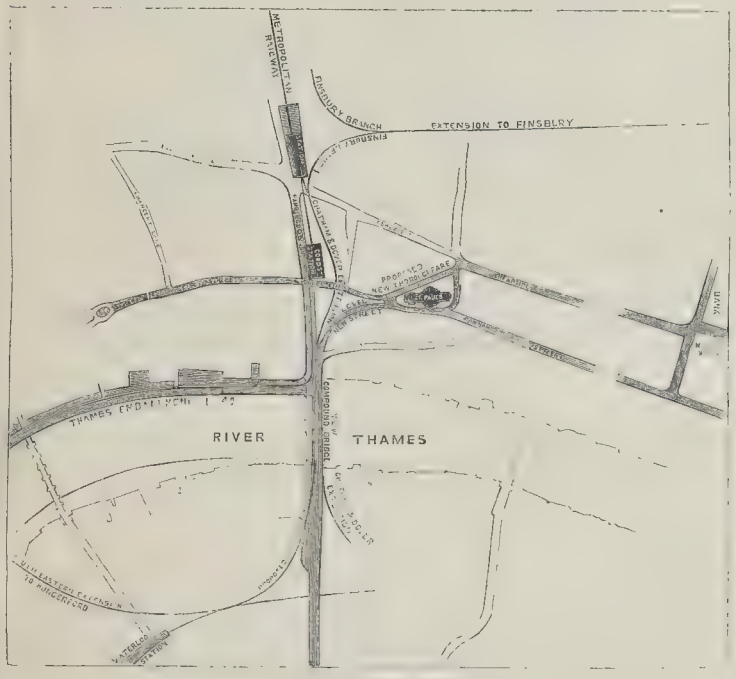
Nobody understands better than Mr. Crace, for example, the application of colour and gilding to the interiors of buildings of a Mediæval character, especially in the form of those charming Gothic diapers by which vast spaces of plain wall may be rendered attractive, and the various details of column and cornice be made to receive additional piquancy and beauty. We have seen how his decorations of this kind redeemed the interior of the Exhibition Building of 1862. But the question is, how far such decorations ought to be seriously, and with seeming permanence, applied to such a building as the ancient civic hall of our metropolis, which is an important and venerable monument, and ought not to have its face too recklessly stuck about with gold leaf by way of placing it in holiday trim. Such decorations, even when good,—and some of the painted ornaments employed there are very well conceived, and even well executed,—are not fitted for, and do not produce the effect of, temporary festal ornament. They raise the question in the mind of the critical spectator, "Can they be washed off to-morrow? and will they come off when washed? and how is the bad gilding to be scraped off?" Decorations devised to do honour to a special occasion ought not to suggest questions of this kind. They ought to exhibit at once unmistakable evidence of being freshly prepared for the occasion, and the occasion only. If, therefore, effects of *painted* diaperings be considered absolutely necessary, they should be executed on canvassed frames, and columns and capitals might be cased in a similar manner. But such a decoration, *fully* carried out, would be too scenic and theatrical; and a far better effect, and one much more consistent with a temporary decoration, would be produced by panellings of rich diapered silks, fitted to such portions of the walls as were entirely without ornament, while columns should be festooned with rich and massive silks of similar character, and happily contrasting colours, just beneath the mouldings of the capitals; and from the loopings up of the drapery, the heavy silk cords by which the looping up was effected should descend the whole length of the column, forming a reedwork of silk, the massive tassels resting on the mouldings of the base; and being kept in place by a circling of the same silken cord, surrounding the column at its base, upon its upper moulding, on which it should rest. Halfway down the column, shields or ornamented tablets might be *suspended*, bearing armorial devices, or complimentary and allegorical subjects; and in the frames and dressings of such shields or tablets gilding (well done) might be used with good effect. Or, these suspended ornaments might be oval or octagonal mirrors, framed in gold, and wreathed with real or artificial flowers. Here is a kind of decoration for columns, either single or clustered, which would be splendid, and yet *evidently* temporary, and which would enrich the architectural forms without concealing them. Beneath the straight lines of cornices, similar festoonings of red silk damask might be used; or, where economy was an object, simply coloured muslin or calico, further enriched by massive fringes; and from the loopings up, to break the monotony of extended surfaces of plain wall, large shields or tablets might be suspended, about which wreaths of flowers might play, and gracefully stray from one tablet to another in elegant and symmetrical lines. When masses of colour are required, a large plain surface should be selected, and drapery of some unichrome tone be suspended from some striking apparent support at the top, from which plain and regular folds at equal distances should extend to the bottom, which should be enriched with a very deep and rich border. Upon the plain surface of this drapery badges, shields, mirrors, enlaced ciphers, or paintings, designed for the special occasion, and fitted to oval or octagon frames, might be suspended. To these features may be added mottoes gracefully embroidered on silk, to be girt round columns with rich cording and tasselling, or wound spirally down them. In short, there is no end to the legitimate features of temporary decoration; the main characteristic of which ought to exhibit unmistakable evidence of its *temporary* character. It should produce the effect of an artistic flash, adding beauty to some already beautiful spot, for a brief space of time—as a gleam of sunshine in a shady nook—a glistening ripple on a lake—a rainbow on the soft grey of an expanse of cloud.

H. NOEL HUMPHREYS.

SPIRE REPAIRS.

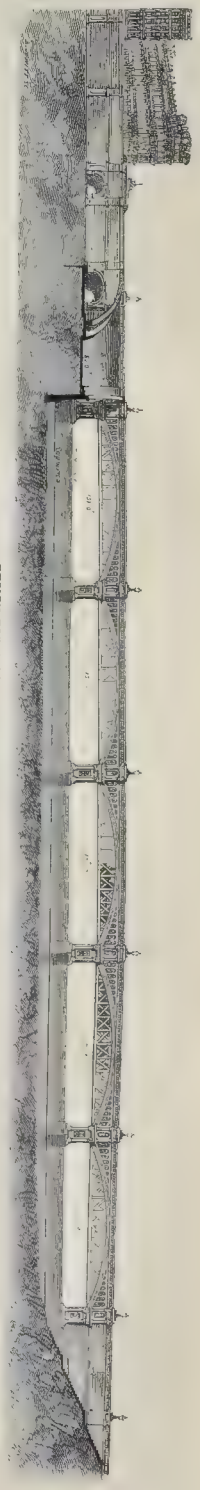
THE spire of Christ Church, Coventry, has been restored. All the decayed angle ribs have been taken out and new ones have been inserted: all the joints have been pointed with Portland cement and sharp sand: the vane and ball have been taken off and regilded. The works were undertaken by Mr. G. Frith, the well-known Coventry steeple-climber, who has recently repaired the spires of St. Michael's and the Holy Trinity of this city. Coventry can now boast of the three tall spires glittering with newly-gilded vanes. The whole of the works were finished much to the satisfaction of the churchwardens, as Mr. Willerton (who is one of them) tells us, and without the slightest accident. The height of the spire is 200 feet. Access was gained to the top of the spire by flying a kite, by means of which all necessary stages and tackle were fixed.

WEST BROMWICH AND KENTISH TOWN WORKING MEN'S CLUBS.



THE first Working Men's Club in West Bromwich was inaugurated by a public meeting, held on Wednesday, the 24th ult., in St. George's Hall, attended by seven hundred working men, and presided over by Lord Calthorpe. The meeting was in all respects successful. Among the speakers were the Earl of Lichfield (Lord-Lieutenant), the Rev. Henry Solly (secretary of the Working Men's Club and Institute Union), Mr. John Jones, (secretary of the South Staffordshire Adult Education Association), and the Rev. C. B. Snepp, M.A. A report of the action of the provisional committee appointed at a meeting held in January last, was given by Mr. J. P. Bell; and it appeared that the preliminary expenses (about 80*l.*) had been met by the principal employers of labour. One of the most telling speeches of the evening was that of the Earl of Lichfield, who said he was convinced that of the efforts made to benefit the working classes, none deserved the support of all interested in their welfare more than the present. Resolutions, commending the club to general support, and affirming the desirability of affiliating it to the union, were unanimously adopted.——A public meeting, to call attention to the club and institute started for the districts of Camden-town, Kentish-town, and South Hampstead, was held on Monday evening, in the National School, Hartland-road, Kentish-town, Lord Ebury in the chair. There were present several hundred working men, who were addressed by the noble chairman on the advantages of the clubs, and the extension of the movement for their formation, by the activity of the central society, of which Lord Brougham was president; and by Mr. H. Harpen, the Rev. Edward White, M.A., the Rev. Henry Solly, Mr. Noel, the Rev. C. Lee, M.A.; the Rev. S. Nunn, Mr. Watkins, and Mr. R. Buchan. The movement in this locality originated in consequence of the published reports of the success of the Scarborough Club. One gentleman has undertaken to guarantee the rent of a house for the first year, and two gasfitters have volunteered their labour towards fitting up the premises. A dense artisan population surrounding the spot will have their physical comfort cared for by the supply of well-cooked food from an hour early in the morning, and other arrangements.

SUGGESTED NEW BRIDGE AT BLACKFRIARS.



FOR several days past the model of an iron bridge, combining public traffic with free transit for intercommunion of railways north and south of the Thames, as designed by Mr. Greenhill, C.E., has been exhibited at Guildhall, and has excited much public interest. The peculiarities and advantages of the plans set forth are, first, that one bridge, and that on the site of the still standing crazy structure, in direct line of the existing main thoroughfares, may suffice for all intercourse. Secondly, that the present central line of streets (Bridge-street and Farringdon-street) will accommodate four lines of rails, laid under arches, and descending by an easy gradient to the point of junction with the Metropolitan Railway-station in Victoria-street, and this without necessitating the purchase and demolition of buildings as contemplated, at a cost of nearly half a million; and thirdly, the raising of the Holborn and Ludgate hollows to the level of fair trotting ground.

The extensive alterations prefigured by the plan, and made palpable to the eye by models of the streets, with their respective proportionate levels, and modes of conjunction, do certainly appear startling, and wear the aspect of "*une idée Napoléenne*" — taking root upon British soil. But of late so much has been published and *talked* as to the great Thames embankment, of the new *Corporation-street* from Blackfriars to the Mansion House, of the threatened street from Earl-street to St. Paul's, through Doctors' Commons—of the raising of Holborn valley through *civic enterprise*; as also of Ludgate-hill by means of the same "*vis inertiæ*," that what might otherwise amaze, only excites admiration, or approval, or mayhap the remark that Royal entertainments, State processions, and banqueting do not altogether occupy Corporate attention, nor wholly absorb City revenues.

The great objects of the project under review are, as professed, to make the approaches to, and the levels from, the bridge, which is 85 feet wide, suitable to the levels of the Chatham and Dover and of the Metropolitan Railways, and to obviate the necessity for a second bridge across the Thames, which, if erected in juxta-position with the public

PLAN OF PROPOSED ARRANGEMENTS.

DESIGN FOR A COMPOUND BRIDGE AT BLACKFRIARS.

thoroughfare-bridge, must not only impede the navigation in this part of the river, where there is a cross current; but, however ornate or beautiful both may be, the effect must prove most unsightly. The gradient from the bridge for four lines of railway to the station in Victoria-street, is proposed to be 1 in 86 to Ludgate-hill, and thence to the station on a level, and underground; thus avoiding the necessity for a viaduct over Ludgate-hill, the same levels being suitable for extension, underground also, to Smithfield or Finsbury. The double lines of arches along Farringdon-street will raise the valley throughout its whole extent, and thus being *au niveau* to the traffic, will adjust the old grievances of the Ludgate-hill and Holborn hollows; improving also Fleet-street, Skinner-street, Holborn-hill, and Stonecutter-street, the last being now a flight of steps to the market.

Beyond these objects, the plans would also secure easy access between Earl-street and William-street, under the railway, by an arch; free communication between New Bridge-street and Upper Thames-street, by a gradient of 1 in 37; communication between Earl-street and the Thames Embankment, either under the first arch of the bridge or by going into William-street and round the gas-works.

In addition, a wholly new street, nearly level, is laid down, to connect the line with Cannon-street. This would be about 1,000 feet in length, and would have issue at St. Paul's, abating three or four houses only, which confront the cathedral; and, while it intruded only upon property which is now comparatively worthless, would be enormously enhanced in value. But perhaps the most daring suggestion is to open a thoroughfare north of St. Paul's, abating and throwing back the line of commercial houses, together with the Chapter-house; thus securing an open route which might divide the aggregate traffic of London's centre into two great streams, the one to pass by Cheapside and the other by Cannon-street.

The new street meditated by the corporation and the Board of Works, leading from Earl-street to the Mansion House would, by this arrangement, be wholly unnecessary; but the great difficulty to be encountered in amending the error of our ways in this particular instance, is the repugnance of the Church to chime in with popular reforms, or to yield a foot even of a cemetery to popular necessities.

There are many points—such as the widening of Queen-street and other lateral approaches; the formation of a line connecting the Thames em-

bankment with New Bridge-street, at a gradient of 1 in 40; the mode of dealing with the Fleet Sewer, &c.; but the foregoing prefigures the chief characteristics of the conception. The question is, has the Board of the Chatham and Dover Railway resolved to carry out the plans laid before Parliament—to perpetrate the Ludgate tunnel "*in alto*," and to drop by gravitation therefrom into the abyss of the Victoria Station? Is there to be no *grand passenger station* for all the northern and southern concurrent railways at Ludgate-hill? The omission of such a provision, close to this heart's-core of the metropolis, would be most improvident and unwise.

It is true that the scheme set forth on the Guildhall table is large. So, also, is that for embanking and limiting the ever-swelling flood of Father Thames. The nearly-faded echoes of long-promised improvements in Holborn and Ludgate valleys have familiarized the multitude with great, though yet abortive conceptions: the practical civic demonstration of what has been carried out in Moorgate-street and Cannon-street, not to speak of the dreamy visions which the demolition and twenty years' desolation of Victoria-street (or either of the streets so named) may occasion;—all these, and the opening of Holborn Bars, Chancery-lane *terminus*, and Temple Bar, with a hundred other blots of our wealthy and luxuriant City, may be effected by the perpetuation of the coal duties. Public companies can and do effect wonders: behold only Hungerford and its bridge, for examples.

The question of cost, even in great public improvements, is also to be regarded. Mr. Greenhill sets forth that the erection of a temporary, or *third bridge*, to serve for traffic during the demolition and reconstruction of the old one, may be avoided, by utilizing that now in progress for the Chatham and Dover Railway. What a relief would this afford to trade and navigation during three or four years, if under corporate management! Then half a million would be saved in the purchase of ground for the projected railway, besides that the tolls for all the lines which he proposes to pass through his bridge tunnel might pay interest on the outlay, for that structure, at least.

As to the aspect of the proposed bridge, a sketch is given in this number of the *Builder*; the span of the arches, five in number, being 150 feet for each, and the headway being 24, 26, and 28 feet respectively: whether the total abatement and reconstruction of Bridge-street, *which is certainly the very best in the City*, may outweigh the other palpable advantages of this scheme, or whether the Chatham and Dover line is not too far advanced to recede, remains to be seen. Still, as a commentary and proof that civic renovations and improvements do not sleep through dearth of suggestion, this notice is presented by

QUONDAM.

TWO PAINTINGS FROM THE CATACOMBS.

WE have much pleasure in announcing, as an archæological event, the publication of two paintings from the catacombs at Rome, accompanied by a learned dissertation from the Abbate Arcangelo Scognamiglio. The first of these was discovered by him two years ago; the second had not before been published in a form which was sufficiently faithful. We translate from the *Monde* some observations on the work. The dissertation proves, first, in a satisfactory manner, that these paintings are found in the cemetery or catacomb of Priscilla the elder. It was excavated in the estate of that Roman lady, who lived in the time of the Apostles, and who, according to Tillemont, was baptised by St. Peter. It is interesting to observe that, among the authorities referred to, the author quotes that of two pilgrims from Salisbury, who came to Rome in the seventh century, and who have both left, in Latin, an account of their journey. The first is entitled, "An Account of the Churches of Rome;" and the second, "The Holy Places of the Martyrs in the Neighbourhood of Rome." He also quotes William of Malmesbury, who wrote in the eleventh century the "Topography of the Sacred Places of Rome," contained in his "History of the Kings of England."

The way into the cemetery of St. Priscilla is now through a staircase to be found in a kind of yard at the back of a farm-house. This staircase is not very ancient; but it is the only one accessible at present. Formerly, there were as many as six which gave access to the cemetery, which may give an idea of its extent. As soon as you enter into it, you are struck at once by a special character of its primitive period, namely, the large size of its vaults. The first architect who directed its excavation did so in accordance with a method differing from that followed in the other catacombs of Rome; where corridors and narrow passages between two walls are ordinarily found. Here the architect has endeavoured to contrive a succession of chambers or grottos communicating together, and destined to the burial of the dead as well as to the meetings of the faithful. Having afterwards observed that this first system could not be followed without exposing the cemetery to total ruin, he abandoned it, and adopted the more ordinary one as affording more security.

The Christians of the fourth century, to prevent the inevitable destruction of this part, erected throughout its extent numerous pillars intended to keep up the whole. As far as the author has been able to ascertain by active researches, there must be four stories of excavations; one only of which is now accessible, without extreme fatigue. According to appearances, it may be stated that these excavations proceed to a vast extent, the precise dimensions of which cannot be determined, on account of the obstacles created by heaps of earth, either left at the time of excavation or brought thither by subsequent accidents. In the part which we shall visit, the chambers or crypts which have served as chapels are numerous, and adorned with paintings; the chief ones, even, have their arcades decorated with Greek ornaments of a perfectly pure character, consisting of the rolled acanthus-leaf. The apsis preserves traces of mosaics, remains of sarcophagi, with figures in a good style; fragments of inscriptions, generally in fine letters, in which may be read names belonging to ancient Roman families, are also met with. The Church must have met in Rome, at an early period, with distinguished minds and influential personages, to whom she even then gave to understand that the ornaments of art could not be more nobly employed than in surrounding the remains of her faithful and martyrs, or in serving as a decoration for her sanctuaries.

The *loculi* (cavities intended for the reception of corpses in the thickness of the rock) are now for the most part without the slabs which closed them, and the corpses which they contained. Enough, however, is still found there to ascertain the mode of burial used in this cemetery. The bodies were wrapped up in a layer of lime contained between two winding-sheets, the one to preserve them from the contact of the lime, the other to keep it close to the body.

After having gone through these imposing excavations, you arrive at a crypt which is so fine and rich in ornaments of the best taste, that the name of the *Greek Chapel* has been given to it. It is hollowed out from the live rock in the shape of a Latin cross. On the wall to the right is to be found a cornice with stucco consoles of the greatest elegance. In the upper part, in the middle of the vault, was bored a light-hole, now obstructed. The ground of this vault is painted red; from the four corners elegant garlands set out, in the midst of which may be seen a figure draped in a white pallium. The finish of all these details displays a specially skilful execution. On one side, the transverse nave, or transept, ends in a square plan; the present entrance is at that point. At the other end, which is in an apsidal form, may be read two inscriptions, in Greek characters, painted in red on the wall. The part of the crypt facing the ancient doorway is also curved in the form of an apse. Below it, on the two side walls, two large frescoes have been painted. On the right is a Roman lady, with her arms extended in the attitude of prayer; by her side two personages are extending their hands towards her. A young man in a *pallium* seems to be speaking to her; behind may be seen a pavilion. Opposite, the same lady re-appears with two young men, who are placing a crown on her head; then comes a woman with her head uncovered, and a youth holding, like her, his arms extended. On considering attentively those paintings, they would almost be believed to be by the same artist as the *Nozze Aldobrandini*, from their being so much alike in the colouring, the draperies, and the freedom and correctness of the drawing. The author of this analysis had the good fortune, last year, of meeting the Abbate Scognamiglio, while he was doing the honours of his dear catacomb to the most worthy of appreciators, to Mgr. Gerbet, the illustrious Bishop of Perpignan, who has so well made known to us *Christian Rome*. It is to be remarked that these paintings have so much expression and life that the hand of a Raffaelle might be thought to be found again in them at an interval of fourteen centuries.

The same crypt contains also other frescoes, more or less damaged, the subjects of which are "The Adoration of the Magi," "Moses striking the Rock," and the cured "Paralytic carrying his Bed away." But the two paintings now published have a special importance. On the right of the first may be seen the Blessed Virgin seated, wearing a tunic without sleeves, and a veil on her head which does not go beyond the shoulders. She is suckling the Divine Child, who has His eyes turned towards the spectators. On the left is a personage standing, about thirty-five years of age, bearded and clothed with a pallium, which leaves the right shoulder uncovered. He seems to be familiarly talking with the Blessed Virgin. This personage can be no other than St. Joseph.

In the judgment of experienced artists and antiquaries, among whom may be mentioned Count Auguste de Bastard, this monument must date from the first part of the first century, about the reign of Domitian. Great skill is not needed to recognize this. It requires only to have a certain knowledge of ancient paintings. From the regularity of the drawing; the freedom and success of the pencil-stroke; from the grace and energy of the expression, a work of the good period may be recognized. The very nature of the plaster, which is only found in Rome in the monuments of the first century, is a convincing proof of it. Connoisseurs observe the nobility of attitude, the chasteness of the draperies, the firmness of look, the life which animates those figures.

The second painting, which is reduced to a scale of one-third of the size of the original painting, shows us, in the middle of it, a person whose stature surpasses that of the others; her features are those of youth. She stands with extended arms, and her head is covered with a veil, which is brought forward over the left temple and falls down to the shoulders. She wears buskins, and a tunic with broad sleeves. On her right is an old man, seated on an episcopal chair (*cathedra*); he wears a tunic, and, over it, the garment called the *penula*, with its hood. He seems to have a tonsure; his hand points to a person placed opposite to him. By his side stands a young girl, with her head uncovered, and holding a veil; a little further back is another personage. On the left of the middle figure may be seen the Blessed Virgin seated on a throne (*cathedra*); she is holding the Divine Child, and seems to give it suck. Her head is uncovered; her hair, turned behind her ears, returns slightly under them to form two curls; the young girl standing on the opposite side has her hair arranged in the same manner.

The comparison of this painting with others of a well-known date, makes it to be ascribed to the second century of the Church, according to the judgment of connoisseurs.

The two paintings are reproduced in chromolithography, and may be had for fifteen francs in Paris, at Mademoiselle de Haut's, 26, Rue de Grenelle, St. Germain.

THE NATIONAL PORTRAIT GALLERY.

AT a day not far distant, the English Portrait Gallery, if properly managed, will become a collection of great curiosity and interest. Much will, however, depend upon the manner in which the pictures are selected, and the care which is taken to procure works of artistic merit, well representing our national worthies. When a suitable place is provided, it will be necessary to make some better and more systematic arrangement than is at present to be found in Great George-street.

In a well-arranged portrait-gallery the pictures should be hung according to their date, and classed in groups, which would exhibit together the likenesses of our great men who have lived during each quarter or half century, since the time when portrait-painting began to be generally practised.

So far as regards oil-paintings, there will be little found worth hanging before the reign of Henry VII.; but there are drawings, as we have already hinted, effigies, and coins, which might be usefully collected. In the reign of Henry VIII. and of Queen Elizabeth there were many remarkable portraits produced by foreign painters. Several of those of the latter date are remarkable for their artistic merit, careful finish, and apparent fidelity as regards likeness. Then comes the famous time of Vandyke, and so on to the days of Sir Joshua Reynolds, Hogarth, Gainsborough, Lawrence, and other worthy successors. In addition to the interest of the portraits, it would be both useful and instructive to see these works thus arranged, in accordance with their particular date, so that they would show the progress and varieties of the English school in this department of art.

There might also be advantage from grouping

the pictures of men or women together who have during their life time been much in the habit of meeting together. For instance, Queen Elizabeth should be surrounded by the representations of those famous statesmen and others who added so much to the glory of her reign. In the same way, we would like to see Dr. Johnson close to Sir Joshua Reynolds, Goldsmith, and Burke. Hogarth might have his surroundings, in which Captain Coram and others would find place; and around Sir Isaac Newton there might be clustered a brilliant array of talent. In like manner we should see the Stephensons, the Brunels, and other famous men of our time.

The method of hanging at which we have hinted would require ample space; but this should not be spared; for we know of nothing in a picture-gallery which has such an unpleasing effect as the placing together picture after picture over every foot of the wall.

In the British Museum, in the Natural History Gallery, as we pointed out at the time of the establishment of the new portrait gallery, there is a considerable number of portraits, which are so placed that they can be scarcely seen. Some of these have much artistic merit, and are, moreover, pictures of eminent individuals. A selection from these might be most usefully made for the National Portrait Gallery.

In connexion with this subject there is a matter well worthy of careful attention: we allude to the collection of enamel and miniature portraits which, during a period of about 300 years, have been produced in large numbers, and which, in many instances, have great beauty.

In the private collections of royalty and the nobility there are numerous miniatures which are of the greatest interest; and it would be worth while to collect for the public use portraits of this kind, which would be suitable in a gallery of English worthies.

BRIGHTON.

A PROJECT is now fairly on foot for the construction of a new pier opposite Regency-square. A company, under the name of the Brighton West Pier Company (Limited), has been formed, the directors of which include gentlemen of high standing in Brighton. The pier is to be a promenade and landing-place. It is to be constructed of iron, and is to extend 1,000 feet into the sea, and to be 30 feet wide. This is 134 feet shorter, but 17 feet wider, than the present Chain Pier, which was originally constructed in 1823: at the head of the new pier it is proposed to erect covered buildings, with reading, smoking, and refreshment rooms, &c.

Mr. William Ranger, the commissioner appointed by the Home Office to inquire into the matter of the improvements at the top of North-street, has attended for that purpose at the Town-hall. The Local Board are the promoters of the scheme, and the whole of the notices have been given. North-street and West-street have great traffic passing along them, and the improvements proposed in North-lane and Duke-street would relieve them of a considerable portion. The intended alterations in Queen's-road, include the taking away of the Odd Fellows' Arms beer-shop and two slaughter-houses adjoining on the west side at the south end, and the White Lion Inn and slaughter-houses on the east side, south end. The top of North-street, where several streets converge, being very dangerous and narrow, this would widen the space and improve the gradient. During the proceedings the commissioner intimated that he could hold out no hope of the order being confirmed this Session; and, after some discussion, the inquiry terminated.

The corporate seal has been affixed to the agreement with Messrs. John Aird & Son, for the construction of an outfall and works in front of the Junction-road. The surveyor reported that it would be desirable to appoint a clerk of works, to specially superintend the extension of the outfall; and Mr. George B. Jerram was appointed at a salary of 2½ guineas per week. The council confirmed the committee's proceedings.

On the proceedings of the Works Committee was a letter from Mr. Somers Clarke, on behalf of gentlemen with whom he had been associated on the subject of the Brighton drainage, inquiring of the Town Council what course it was intended to pursue in regard to the plan of drainage submitted, at the suggestion of Sir Francis Goldsmid, by Messrs. McLean & Wright. The committee resolved, "That Mr. Clarke be informed that the scheme of drainage of Messrs. McLean & Wright, with other schemes, is under the consideration of the Works Committee of the Council." The Council confirmed this.

The new Church of St. Anne, which has recently been erected at the top of Burlington-street, Marine-parade, has been consecrated. The church has not much ornamentation. The pulpit is of stone, and the aisles are paved with red and black tiles, while the ceilings are of varnished wood.

ARTISTICAL PAPERHANGINGS.

IN our notice of the Architectural Exhibition we spoke with commendation of the excellent paperhangings there produced by Messrs. Woollams from the designs of Mr. G. T. Robinson, architect. We have before us now a couple of books of papers issued by the firm this year. In conjunction with Mr. Robinson they are working in the hope of doing something to raise the very low standard of designs for paperhanging; and, with this end in view, Messrs. Woollams have this year brought out a series of Mediæval paperhangings, ranging from the thirteenth to the sixteenth centuries, and have further commissioned the same architect to prepare a series of Greek designs for next year's issue. They hope, by following out this system, to produce something better in purity of style than the medley which at present crowds the market. These designs, as we noticed before, consist in chief of conventional treatment of natural foliage, such as the hawthorn (9,276), buttercup (9,275), shamrock (9,272), passion flower (9,262), ivy (9,252), pomegranate (9,241), wood-sorrel (9,236), wild geranium (9,225), clover (9,223), lily, as fleurs-de-lys, and also in less heraldic treatment, and the rose. Five of these designs are exclusively ecclesiastical in their character, and intended for oratories, mission churches, and for the temporary decoration of churches.

The colouring is chiefly based on the law of simultaneous contrast without the intervention of any boundary line of negative quality.

The majority of the patterns are exceedingly satisfactory, and not expensive. We have to repeat our acknowledgment to Mr. Robinson and Messrs. Woollams. Every endeavour to raise the industrial arts and to put within reach of moderate means tasteful adornments for houses has our best wishes, and deserves our best words.

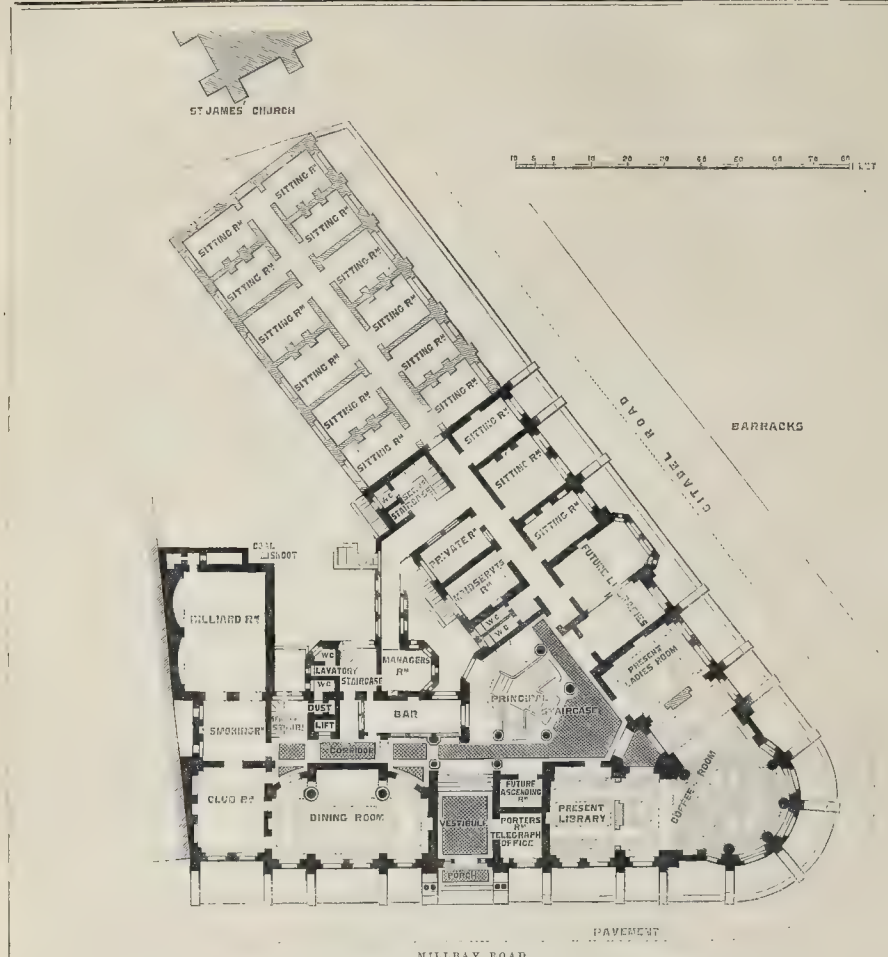
THE ISLINGTON REFORMATORY AND RAGGED SCHOOLS.

IT is some years now since we noticed a large barn-like building in Bryan-street, Caledonian-road, which had been arranged for the above purpose. After a severe struggle, and by the earnest exertions of various individuals, this institution was extended; the number of boys, who sadly needed reformation, was increased; and, from want of sleeping room, it became necessary to rent two or three of the adjoining houses. This was, however, found so inconvenient that it was determined to raise a suitable building on a piece of ground close by, in Copenhagen-street; and this, as our readers know, was opened not long ago.

On calling the other day, we found the establishment in excellent working order. The ragged school is numerously attended, and efficiently presided over by the teachers. In the well-arranged kitchen, the kitchen-boy was busily engaged cooking the dinner, and seemed to pride himself not a little on the promising appearance of the potatoes and the beef under his care. Near the kitchen is the dining-hall, in which the boys take their meals; and close by is a spacious lavatory, supplied with plenty of cold water, and with baths which can be provided with hot water. Care is taken that all the inmates are thoroughly washed once a week at the least. Many of the boys when first brought here are in a dirty and neglected condition; and no doubt the cleanliness of the skin, and the plain but neat-looking and clean dresses provided are important steps towards improvement. The dormitories are of sufficient size; and care has been taken for ventilation, not only here, but also in other parts of the building. The rows of beds are clean and comfortable. The dormitories are managed with a kind of military precision: boys promoted to the rank of corporals have to report cases of sickness or misconduct.

No boys convicted of crime are admitted here; but most of them have committed offences which, in nine cases out of ten, would ere long have led to conviction and to prison. Besides boys driven here by distress, there are some belonging to persons in better condition, who can afford to pay for their support. It is unfortunately a fact, that in many instances parents who have both means and general intelligence, lack that amount of firmness and right management of children which is essential to proper subjection and good conduct. Often the sons of tradesmen and manufacturers are led away by those in the father's employment who are much older than themselves; and it would be very beneficial to boys of this stamp to be under the kind but firm rules of such an institution as this. It has been hinted that the reception of boys of this class might be liable to interfere with arrangements for those in more distressed condition: we do not think that this would be so to any great extent; for, in every case in which the parent has the means, and it can be shown that it would be to the advantage of a boy, a sum that would be adequate, or even more than adequate, for his support, would be charged. This, however, is a matter which requires consideration. There are, at all events, instances of persons who would gladly get rid of children, even for a time, at a comparatively cheap rate. We merely suggest the idea, in the hope that it may lead to some practical results.

In a visit to the workshops we found in one room a number of boys in the care of a superintendent, and engaged in cutting wood: in another place there were shoemakers; in another tailors: in the latter it was both painful and laughable to see the small boys endeavouring to cross their legs into the unnatural and unwholesome position which is orthodox amongst this body of workmen: improvements have been suggested, and few but tailors can see the necessity of thus deforming themselves.



For the most part the boys looked in good health, happy and contented. On asking them how they happened to be there, several said, "Because I have been a bad boy, sir." In some instances, when spoken kindly to, the tears rolled down their cheeks. There were, however, obstinate spirits amongst them who had not the grace to see that they were bad; and upon whom, we fear, neither kindness nor violence will have much effect in the way of reformation.

At present the interiors look rather rough, the brickwork not having been covered; but no doubt this defect will soon be remedied. Meanwhile we strongly recommend this establishment to the support of the large district of Islington, which alone contains a population greater than that of most of the chief towns of England. It would be of advantage if those who are desirous of doing good were to pay a visit to Copenhagen-street.

WATER SUPPLY IN LARGE BUILDINGS.

FROM time to time we have directed attention to the necessity there is, in all great buildings, of a proper water supply. In the General Post-office at St. Martin's-le-Grand, so complete is the system of carrying water-pipes throughout the building, with taps, hose, &c., that, except from a deficiency of supply from the main, or inexcusable neglect of duty, a fire, to any extent, is almost impossible in this structure. We have alluded to the same provision in some of the large metropolitan manufactories; at the Marquis of Salisbury's house, at Hatfield; and in some other places. There is, however, a sad neglect of these provisions in many most important buildings; particularly in those immense warehouses near the river; several of which have suffered so severely from fire.

In our churches and cathedrals a water supply of this description should be provided; for in most instances, gas lighting and heating by stoves have been carried out to an extent which was not thought of formerly; and, in consequence, the danger is greater. In theatres care in this respect is especially necessary; and yet, in the metropolis and many of the large towns, this means of saving life and property is not rightly attended to. At the British Museum, which is not fire-proof, we doubt, although there are fire-engines kept on the premises, whether the means of obtaining an immediate supply in necessary parts be sufficient. At the Houses of Parliament this need seems to have been very well attended to; and it is probable that, but for this, we should have had to record, in the recent fire, a large extent of mischief. This accident, fortunately so slight, also shows the great care which is necessary not only in the construction but also in the arrangement of flues, particularly in such buildings as this; for if the outbreak had taken place at night, or if the powerful water force had not been immediately at hand, the damage might have been immense.

THE DUKE OF CORNWALL HOTEL.——*Plan of Principal Floor.*

THE DUKE OF CORNWALL HOTEL, PLYMOUTH.

THE building of which we give illustrations (to be called "The Duke of Cornwall Hotel") is about to be erected at Plymouth, for the Plymouth Hotel Company, on a large space of ground recently occupied by private houses, and exactly opposite the railway terminus in Millbay-road, at its junction with the Citadel-road. Occasion has been taken to improve the five important streets meeting at this point by widening the roadway of each; improvements not easy to effect considering that the concurrence of three distinct corporate bodies besides the authorities at the Admiralty had to be obtained.

To those who do not know the locality, we may observe that the Citadel-road leads to "The Hoe," one of the most remarkable public parks in this kingdom, comprising a fine combination of sea and land scenery, the eye ranging over the whole harbour, far out to sea beyond the Breakwater, and enjoying at the same time the landscape of Mount Edgecumbe and the adjoining slopes as well as of the towns.

From the plan it will be seen the hotel comprises a large and lofty coffee-room, dining-room, smoking and club-rooms, on the ground-floor, and the usual necessary arrangements for the manager, bar, porter, telegraph, luggage-lift, &c., &c.

The necessary height for the more important rooms is obtained by introducing a mezzanine floor. Besides this there are four floors of sitting rooms, with bath-rooms and other conveniences on each floor. These have been arranged for the accommodation not only of families and persons occupying several rooms, but also for gentlemen requiring but one apartment to themselves.

At present it is intended to erect only a portion of the general plan, but this includes all the principal apartments. When, however, the whole is completed, it will contain upwards of 200 rooms.

The chief peculiarity in the plan seems to be the staircase, which is circular, and is placed in the inner angle of the corner, the most central part of the building, and at the same time close to the entrance, the lift or ascending-room, the coffee-room, and the wing of private apartments to be erected hereafter.

The stairs are to be constructed of Portland stone, carried on wrought-iron strings, which are to be visible so as to form part of the constructive decoration of the building. The general system of internal decoration, if decoration it may be called, is to be extremely simple but substantial, inasmuch as the girders which carry the floors [in the coffee-room, &c.], are to be visible, and form in themselves the panelling of the ceilings, while the cornices, window-frames, and so on, are to be wrought in a manner to correspond with them. It would be desirable, perhaps, to add a little colour to this, lest the work should appear too heavy or massive for the purpose intended; but this will probably be done at some later period,—the great object at present being to supply, as soon as possible, the want of first-class accommodation. Of the exterior elevation our readers may judge from the engraving. The windows, placed as they are in groups, with the circular turret, and the tower-like erection at the angle of the building, give a play of light and shade, in place of the warehouse or cotton-mill character sometimes seen in these buildings of many windows, while the unbroken line of balcony on the first-floor serves to unite the whole. The dressings of the windows are of Plymouth limestone, without any mouldings whatever: the window heads are of Tamar granite. It was intended to use terra cotta for certain parts, such as chimney shafts, &c.; but this has been abandoned owing to motives of economy. The architect is Mr. C. Forster Hayward, of London. The contract for the execution of the works has been taken by Messrs. Call & Pethick, of Plymouth.

OPENING OF NEW ALMSHOUSES IN SOUTHWARK.

AMONG the buildings interfered with by the extension of the railway system in the borough of Southwark, has been that designated in parochial records as "The College," or St. Saviour's Almshouses. The institution consisted of sixteen dwelling-houses and a chapel. These having been required for railway purposes, the parochial authorities have erected and opened an equal number of dwelling-houses and a chapel, on a piece of ground situate in Hamilton-road, Lower Norwood.

THE DUKE OF CORNWALL HOTEL, PLYMOUTH.—Mr. C. Forster Hayward, Architect.

BRIDGES OF LARGE SPAN.

ON this subject the *Engineer* has some obser-ations which may interest our readers. They n thus:—Something was said, a year ago, of . Oudry's scheme for bridging the Straits of essina by a single span of 1,000 mètres, or 280 feet—the proposed structure being, of ourse, upon the suspension principle. This pro-osition exceeded in boldness that made a few ars before, by John A. Roebling (the engineer the Niagara Railway Suspension Bridge), to oss the river Mississippi at St. Louis by a single spension span of half a mile. The Atlas Works, Sheffield, were, we were confidentially informed, gaged upon the steel bars for M. Oudry's great idge; but we, perhaps, run no risk in saying at, if these bars have left Sheffield they have ot reached Messina. The proposed bridge, we ay observe, would have nearly five times the an of the great opening (676 feet) of the late ungerford Bridge, the chains of which are now eing erected over the 702 feet span at Clifton. e do not wish to attach the word "impossible" anything of which there is the least ground for ope in engineering, but very large suspension ans must be made upon improved principles if ey are to give satisfaction. The Lambeth idge, with its three spans, of the moderate idth of 280 feet each, does not quite satisfy us at, even with Mr. Barlow's mode of stiffening e roadway, such structures are likely to come to general favour. It is true that the wires of e cables of the Lambeth Bridge were twisted gether, instead of being bound up as a bundle straight parallel fibres, in the manner of the bles of the Freiburg and the American wire idges; and the twist so put in has yielded under rain, the cables being thereby lengthened, by hich the joints of the diagonal bracing have en thrown more or less out of the positions they ere intended to occupy. So great was this retching at first, that the stone paving originally tended to be applied to the bridge, and which ad been in part placed upon the platform, was und to be inadmissible, and wooden blocks had be substituted. The saddles of many of the rtical suspending bars appear to have already pped to some extent upon the cables, thereby using chafing, which, however slight in amount, not likely to conduce to the permanent strength the bridge.

Tubular, plate, and lattice girders, which are, thin the limits of their application, preferable any other form of bridge, are only able to sup-rt their own weight over spans of between 500 feet and 2,000 feet, and would not be safe more than one-third of the span at which they uld thus break down. This is supposing them be made of iron, and of about the ordinary pro-rtionate depth. If, as would appear, we are on e eve of a vast and cheap production of steel, or homogeneous iron," if that title be preferred, we ay succeed with even wider spans. It is not cer-in either that a greater relative depth of girder truss might not be adopted with advantage. In ste iron this cannot, perhaps, well be done, espe-lly when the great quantity of material then quired for stiffening, or to resist buckling, is nsidered. There is a depth, for every truss or rder, in which the strength is a maximum for a ven quantity of material—supposing a prescribed rangement of the material in the sides, as the ate form, lattice, &c. The deeper the girder or uss, the less the strain and necessary metal in e top and bottom chords, and the greater the antity of material in the sides. If the strains tween the top and bottom flanges are taken on llow wrought-iron columns and tension bars, a ep truss may be made of large span with con-derable economy of material. We have no very rge spans to refer to in illustration, but the inciple is the same in moderate spans. Thus in paper lately read before the Institution of Civil gineers, two bridges, a truss and a plate girder, re described. The dimensions, strains, weights, , may be given as follows:—

	Truss.	Plate.
an.....	125 ft.	96 ft. 10 in.
pth	23 ft.	7 ft. 6 in.
ight per lineal foot of		
ach girder for single line	5 cwt.	3¼ cwt.
ximum strain produced by a live load of 3,000 lb. per lineal foot of both girders.....	3½ tons tension 4½ tons compn.	6 tons 5½ tons

In the plate girder the web varied from ⅜ inch to ⅞ inch in thickness, while the angle irons and top strips would, if spread out over the whole surface of the web, have amounted to more than inch of additional thickness. In the case of the truss, however, of 38 feet wider span and more than three times the depth, the whole of the parts forming the sides, or, indeed, the whole of the truss, excepting the top and bottom flanges, would not, if spread out upon a flat surface of the length and height of the truss, have amounted to as much as ¼ inch in thickness. How far open trussing could be applied with advantage to trusses 60 feet deep, and corresponding to, say 600 feet span, would be seen on trial. For such a span a depth of 60 feet would of course require but two-thirds as much iron in the top and bottom flanges or cells as would be required for a truss of the same span and only 40 feet deep, corresponding to $\frac{1}{15}$th the span. In trusses or girders over 25 feet in depth, and where trains are to run upon the level of the bottom flange, the sides can be braced one from the other, with a comparatively small quantity of iron. This is done in the large railway lattice bridge—six spans of 397 feet each—over the Vistula. It is one of the advantages of the lattice system that it can be made of greater proportionate depth than the plate girder, without increasing the quantity of iron for a given span in the sides, and with a corresponding saving of iron in the top and bottom flanges. In other words, the lattice can be applied to wider spans than the plate girder, for a given strain per unit of section. The late Captain Moorsom, it will be recollected, designed a railway bridge with two lattice spans of 600 feet each, for crossing the Rhine, at Cologne. This bridge received the prize from the Prussian Government, and the strains per unit of section were, we believe, very moderate.

A ROPE BRIDGE.

THE newspapers have lately described a mode of communication across the river Dee, at Abergeldie, near Balmoral, "by means of a rope suspended by two poles rigged with pullies." It may not be uninteresting to know that one of these poles was a magnificent ash tree, probably some centuries old, but now deprived of its head; the other the stem of a very substantial fir-tree, fixed in the ground on the opposite side of the river. Between them, on a strong rope, is suspended a cradle, capable of containing not only "parcels," but two persons. This cradle descends by its own weight from one side, and is worked up the ascent on the other by the hands of the person crossing. In the year 1829, at the time of the great floods in the rivers in the north of Scotland, all means of communication across the Dee, for sixty miles, was interrupted, except this "primitive contrivance." One stone bridge was washed away, and three others rendered impassable. This "primitive contrivance" (or fly-boat, as it is called) has also had its misfortunes. One winter's night, some years ago, the rope broke, and a young man and his bride were drowned in the river below. In days before railways, but after mails had been greatly accelerated, letters reached this distant region every alternate day on the fourth morning from London. The postman's horn was the signal for the "fly-boat," in which he crossed with his letters; and, after having finished his breakfast with as much dispatch as was needed in those days, he recrossed the river by the same conveyance; and, having rejoined his horse bearing the mail, he continued his journey up the country to Braemar.

THE ARCHITECTURAL ASSOCIATION.

THE concluding meeting of the Association for the session 1862-63, was held on Friday evening, the 26th ult., at the House, in Conduit-street; Mr. T. Blashill in the chair.

The following gentlemen were nominated for election:—Mr. Leonard Macon, 12, Carlton-chambers, Regent-street; Mr. William Hill, 2, Highgate-place, Birmingham; and Mr. Thomas Frederick Proud.

The Chairman observed that as, by the rules of the Association, members nominated at the present meeting could not be elected until the first meeting of next session, it might be desirable that they should in the mean time be admitted to the meetings of the Voluntary Examination Class, which would assemble as usual during the recess.

Mr. Adams (hon. sec.) said that some regulation of the kind would be desirable; and a resolution was passed accordingly, admitting all nominated members to the Voluntary Architectural Class during the recess.

A resolution was also passed, appointing the president of the Voluntary Examination Class an *ex officio* member of the committee.

The following gentlemen were then unanimously elected office bearers of the Association for the ensuing year:—

President, T. Roger Smith. Vice-President, R. Phéné Spiers. Committee, Messrs. Molecey, Bayne, Lemon, Reeves, Julian, Brooks, Ridge, Paris, Lewes, Tarver. Hon. Treasurer, Charles J. Adams. Hon. Solicitor, Francis Truefitt. Auditors, T. M. Rickman, B. A. C. Herring. Curators and Librarians, C. H. F. Lewes, John Johnson. Hon. Secretaries, Charles J. Adams, J. Douglas Matthews.

Mr. C. North next read a paper on the Cathedral of Rochester, which he prefaced with some observations on the early history of the town, its castle and fortifications. Referring to the cathedral itself, he observed that the Norman cathedral consisted of a nave, aisles, and transept, occupying the position of the present west transept, with lantern at the intersection; short choir and apsidal at the east end, probably built on the old Saxon remains. All that at present remains of the west front is the beautiful doorway with the arcading over; small portions of the arcading under the turrets; and the south turret and spire of what might be termed the façade proper. Half of the original south tower also remained. The author condemned the restorations of Mr. Cottingham, which he described as modern Vandalism. He was glad to say, however, that in modern times the authorities of the cathedral not only understood but appreciated the beauties of the building. The Norman chapter-house attached to the cathedral was worthy of mention. The west end was divided into two stages, the lower one with the entrance-door, and a window on each side, and three large lights on the upper stage to correspond. The diaper and details were of the richest description, and the remains of the arcading in the cloisters bore evidence of considerable taste. The tympanum of one of them still retained traces of the zodiac round the edge, with Scripture subjects in the centre. The paper was illustrated with a series of drawings and photographs.

At the conclusion, Mr. T. R. Smith offered some observations in reference to out-door sketching, suggesting the best materials to be used, and best *modus operandi*.

A vote of thanks was subsequently passed to both gentlemen for their papers.

The services of the president, vice-president, committee, and honorary officers of the Association, were also acknowledged in a vote, which received the cordial approval of the meeting, and the session was brought to a conclusion.

THE CASUAL POOR.

VISCOUNT RAYNHAM has done good service in bringing the management of the casual wards of the metropolitan workhouses under the notice of the House of Commons. His lordship referred to a case in which the authorities of one of those institutions refused, upon his representation, to admit a poor woman and her children into one of these harbours for the destitute. After asking the President of the Poor-law Board if the authorities at the workhouses had a right to refuse a refuge to the casual poor except when the casual wards were filled to suffocation, Lord Raynham gave notice of his intention to introduce a bill for providing proper accommodation for the casual poor.

With regard to the question put by Lord Raynham, Mr. Villiers said, that he had not received notice of the refusal to admit the casual poor: he could, therefore, give no information on the subject; but he would suggest that the proper authority to make complaints of such a nature to was the Poor-law Board; and then, if no redress was obtained, the subject could be brought under the notice of Parliament. We doubt, however, as matters are at present managed in the metropolis in connexion with the care of the casual poor, if the Poor-law Board is to be depended upon for the proper protection of a most miserable and helpless portion of our population. Long experience shows that very great hardships are suffered, particularly in the winter time, by numbers of houseless men, women, and children. We could mention many cases under our own observation which clearly prove that better regulations than those existing are needed. In the newspapers we often read sad accounts; and there can be no doubt that hundreds of instances of neglect occur which are never generally heard of. What is wanted for the assistance of the casual poor is, prompt and immediate rescue, and the prevention of the disgrace to us of allowing human beings to perish in the roadways of this great city.

We know that there are many difficulties in connexion with the management of the casual wards; that some parishes and unions furnish more extensive accommodation and kinder treatment than others; and that to these places the poor flock, who have been turned away from other workhouses. There is also much deception to deal with; and there are many who, if obliged to do so, could afford to pay for their lodgings, but who come night after night to sleep in the workhouse: there are thousands, however, who are driven to this resource by actual and stern necessity, and many of these are very hardly dealt with. We know of a case in which a poor charwoman, hard-working and honest, but out of work, and driven to desperation by refusal of casual relief, complained to a magistrate; and ever since, when compelled occasionally to go into the workhouse, she is treated precisely as those are who have committed some infraction of the regulations of the house; the purpose evidently being to impress paupers with the idea that to complain to a police magistrate is against the Poor-Law regulations, and as such punishable by the petty local authorities.

The casual wards are often the means of introducing fevers, small-pox, and so on, into the workhouses. Some of them are still so badly ventilated and ill managed that they are proximate causes of disease; and it would be right to consider if it would not be of general advantage for the united parishes of the metropolis to provide, in suitable positions, shelters for the casual poor: at any rate it is very necessary, if this be not done, that when the police find, or have their attention directed to, persons who are roaming in a destitute state in the streets at night, they should be empowered to demand admission for them into any workhouse. Not long since a poor woman (who died shortly afterwards) was taken, while in the pangs of childbirth, to one of these places, and was refused admission because she did not belong to that parish, but came from a short distance over its border. We could give many similar instances of hardship connected with the treatment of the poor by their "guardians," and we earnestly hope that Lord Raynham will persevere with his intention of bringing on the matter for discussion in the House of Commons. We must offer no premiums for pauperism: but men and women must not be allowed to die of want in the streets.

CHELMSFORD NEW RACE STAND.

THE old building of boards, which on more than one occasion was mistaken by the traveller for one of the ancient tithe-barns, has disappeared, and in its place, and with its front in the opposite direction, a substantial brick structure has risen up, under the hands of Mr. T. C. Moss, the contractor, from the arrangements of the architect, Mr. J. F. Clarke.

The new stand occupies an area of 73 feet by 40 feet—about four times as spacious as the old building. The western façade is broken by the projection of a porch with rusticated pilasters and moulded cappings, from which springs a semicircular rusticated arch with keystone, with the date of the present year engraved upon it. Similar arches spring from arches on either side. Above the porch is the ladies' retiring-room. This part of the building is finished with cornice and parapet at the sides, and a semicircular tympanum in the front. The hall is entered from the porch, from which a staircase gives access to the gallery and inner standings. The refreshment-room, 29 feet by 20 feet, has an entrance from the hall. The lawn is also reached through its folding doors, opposite to the entrance of the porch.

The lawn is of a spacious character, containing not less than 13,000 square feet. The iron fence, which forms its boundary from the course, has two iron gates,—one for ingress, where payments are made; the other for egress. Adjoining the lawn, on the north, and separated by a continuance of the iron fence, which sweeps round to the iron hand-railing of the stone standings is the jockeys' yard. This yard is further inclosed by brick walls. Within this inclosure there is a communication with that portion of the stand which is set apart for the use of the committee, reporters, weighing and retiring room for the jockeys, &c. At the entrance to this yard from the corner is placed, within an inclosure, the judge's chair.

The stone standings are of substantial character, being composed of turned work, or arches of brick, upon which the standings are stepped up in solid brickwork, and covered with York stone landings 2 feet 9 inches in width, thus allowing two persons to stand in depth. There are eight of these steps or standings, which are calculated to accommodate comfortably 600 persons. In addition to this, beyond the line of demarcation formed by the columns which support the roof and the ornamental railing between them, rise in regular gradation other standings of similar dimensions, but of wood, constructed upon trussed principals of a most substantial character. They are four in number, besides the terminal or platform, 10 feet in width, and the entire length of the building. In this, the covered portion of the stand, sitting and standing room is provided for other 600 persons.

Upon the solid stone standings are a series of hand railings, four in number, painted blue; the columns of the roof, with the railing at their lower portion, painted white and blue; the aërial roof and the pendental facier in parti-colours red, white, and blue. There is a flag-staff upon each hip of roof.

The entire area of stand, lawn, and other inclosures is equal to 190 feet by 110 feet, or upwards of 20,000 square feet. The cost of the buildings, alteration of course, and contingent expenses, will exceed 2,000*l*.

MONUMENT NEAR BERNE.

IN the parish church of Hindelbank, near Berne, there is a celebrated tomb, similar to the one represented in your Number for April 11th. It is below the level of the floor of the chancel; and, for protection, is covered with a pair of folding trap-doors.

The stone is marvellously represented as broken in three pieces by the force of the mother and child rising through the fissures. It was executed by M. Jean Auguste Nahl, to the memory of the wife of the pastor of the village, who died at an early age in child-bed. An inscription in German runs across the stone,—broken, of course. A French translation is annexed to an engraving of the tomb, which I purchased in the village, a copy of which I beg to send you. It was written by the celebrated M. de Haller.

H. T. ELLACOMBE, M.A.

Me voici, Seigneur! avec l'enfant que tu m'as donné,
Entends-tu la trompette! elle a brisé la pierre
Qui couvrait ton cercueil,
Du tems et de la mort voici l'heure dernière;
Plus de maux . . . plus de deuil.
Enfant de ma douleur, à la voix maternelle
Sors de ton long sommeil;
La ciel s'ouvre . . . au bonheur l'éternité t'appelle
A l'instant du réveil!

Dans cette heureuse espérance
A été déposée ici la dépouille mortelle
de
MARIE MADELAINE LANGHANS,
Née WÆBER,
Qui nasquit le 8 Août, 1723, et mourut la veille
De Pâques, 1751, arrosée des larmes de son Epoux,
GEORGE LANGHANS,
Pasteur à Hindelbank.

THE APPLICATION OF STEAM POWER TO THE THAMES BARGES.

EVEN so lately as five-and-thirty years ago there might be seen on coally Tyne some hundreds of grim-looking vessels, each of rude proportions, and propelled either by means of long sweep oars, or by a large single square sail. It is said that these barges, or "keels" as they were called, were built upon the same model as the Danish ships which invaded the northern coast 800 or 900 years ago. These keels were employed in conveying the coals from the numerous collieries along Tyne-side to the ships, into which the black diamonds were cast by slow and tedious hand labour. In order to save all this trouble, wooden staiths were made to project from several of the colliery tramways on the east of Newcastle into the deep water of the river, so that the ships might lie to, and the contents of each coal-waggon be passed directly into the hold of the vessels. This gave rise to great opposition from the keel-men, a powerful and sturdy race, who were only prevented from committing mischief and destroying the staiths by the active interference of the authorities and the soldiery. Of this once numerous black fleet, which sailed to and fro at every tide, not a single vessel remains. The locomotives on the colliery railway lines bring the coals to convenient points, where they are shot with wonderful rapidity into the steam and other vessels.

When looking at the picturesque barges which, laden with so many commodities, navigate the Thames; steering often with so much difficulty against wind and tide; we have often thought of the north-country keels, and wondered that improvement has not taken place in connexion with the Thames vessels. The delay caused by the wind and in waiting for the tide is great; but we notice that an attempt has been made to prevent this. The Thames coal-barges are a slower and more helpless craft than were the "keels" of the Tyne; but the other day we saw a powerful steam-tug drawing with great rapidity more than half a dozen of these vessels against the stream and in the teeth of a contrary wind. No doubt this plan will soon come into considerable use, for inconvenience and loss are often caused by delay in the delivery of many kinds of goods; and before long it is likely that vessels for the same purpose, but of a different construction, and moved by steam on the railways which will so soon pass through the metropolis to many points, will cause barges to disappear from the face of the Thames in the same manner as the keels have vanished from the Tyne. The use of steam on the Regent's Canal is working well, and the number of boats in this way supplied has been increased.

BUILDING NEWS FROM NEW ZEALAND.

SEVERAL public buildings of consequence are about to be constructed in each town. In Lyttelton the site is prepared for a hospital overlooking the west end of the town. A town-hall is also talked of, for which a very imposing plan has been prepared by Mr. Igglesden, the town surveyor. In Christchurch preparations are being made for a new council-chamber, which will form an addition to the present block of Government buildings. A court-house is at last about to be erected not far from the same block. Close to the town a new gaol, of considerable dimensions, is about to be commenced; and on the lunatic reserve a hospital is to be immediately begun.

By far the most important building yet contemplated is a cathedral. The sum of 12,000*l*. was subscribed for this purpose in a single forenight, and the list has since been augmented by the sum of 3,000*l*. Little has yet been done, however, by the Commission entrusted with the management of the funds, beyond preliminary discussion.

The general building trade is very active, and both carpenters and timber command high rates. Latterly work has been much hindered by want of hands, and skilled workmen have been readily engaged at 13*s*. to 15*s*. a day. Both public and private works of comparative magnitude have occupied the trade to such an extent that builders appear, according to our authority, the *Lyttelton Times*, of 8th April last, to have been unable to meet the demand for private dwellings which are very difficult to be obtained in the neighbourhood of Christchurch. With good bricks,—and the finest can be made here,—and a fine stone ready to hand in any quantity, we may reasonably expect, says this paper, before long to see Christchurch put on a new dress more worthy of the capital city of a flourishing settlement.

With the growing prosperity of the Canterbury province, the operations of the public works department extend with such ramifications over the whole of the country, that anything like a distinct account of the works in hand has become impracticable.

At the Lyttelton and Christchurch Railway the Moorhouse tunnel makes steady progress, and the contractors are pushing on the works in order to be able to open the line between Ferrymead and Christchurch in September next.

Amongst works of arterial drainage are the clearing of the rivers Avon, Heathcote, and Halswell, works of considerable importance to the districts through which these rivers pass.

The instruments and wire required for the extension of the telegraph to the Otago frontier have been ordered from England, and Mr. Alfred Sheath, the Government superintendent of telegraphs, is about to proceed to the south to make arrangements for its further extension to Dunedin and Invercargill.

The new immigration barracks are now in course of erection at Christchurch, under the direction of the district engineer. The contract for the new Lunatic Asylum, from a design by Mr. Dobson, has been let to Mr. F. Jenkins, of the Ferry-road sawmills, for 3,000*l*. The building is to accommodate 30 persons, and is to be built on the north side of the Lincoln-road, about three miles from Christchurch. The Government have also decided on building, from a plan prepared by the provincial engineer, a new jail, to hold 120 prisoners on the separate system, at an estimated cost of 30,000*l*. Police-barracks and lock-up are also in course of erection at several places.

hey have hitherto been greatly wanted. The lesigns for these buildings have been prepared nder the immediate direction of the Commissioner f Police. At Timaru a small hospital is to be ommenced immediately, as also a public powder nagazine.

The towns of Lyttelton and Christchurch are till running a race of improvement, although, s heretofore, the capital takes precedence of the ort town. Both town councils are discussing the uestion of water supply.

Many roads are still in progress in various parts f the colony.

CHURCH-BUILDING NEWS.

Nottingham.—The foundation stone of the new ndependent Chapel which is being erected by the nembers and congregation of Castle-gate meeting-ouse, on the site of the old chapel in that street, as been laid. The building is now nearly ad-anced to the height of the plinth, and will be in he Venetian style; treated, however, in a free manner; several parts bearing evidence of the predilection of the architect for the Gothic style. The materials will be brick, with stone dressings. The architect has placed the windows, both in the ide and front elevations, in deep recesses. The hapel will front Castle-gate, and the façade will onsist of a centre, with two wings projecting, with ornamental cornices round, containing the gallery staircase. The height of the front to the apex of the gable will be upwards of 60 feet, the extreme width of the front 66 feet, and the length 103 feet. The main entrances will consist of two doorways, divided by a granite shaft. A feature n the interior will be an arcade running the entire ength of the chapel, supported upon coupled iron shafts. The ceiling will be in five spans, or arches, divided into panelling by the cross ribs of the roof. Two large vestries are placed immediately behind the pulpit, and under the organ gallery.

Arborfield (*Berks*).—The old Parish Church being inconveniently located, a new church has been built on a new site, and the Lord Bishop of Oxford has just consecrated it. The architect is Mr. J. A. Picton, of Liverpool; and the builder Mr. Hughes, also of Liverpool. The architecture of the church is that of the fourteenth century, and consists of the nave in five bays (geometrical pointed), with a chancel having an apsidal east end; and there is an open timber roof throughout the church. The floor is paved with Minton's tiles, those in the chancel being encaustic. The church is seated with open benches, having carved bench ends. At the west end is the tower, with broach spire, the tower being in three stages, with buttresses at the angles. The exterior of the whole building is faced with flints, having dressings of Combe-down stone.

Croydon.—The foundation-stone of a Roman Catholic Church has been laid at Croydon. The design is Gothic, and the edifice will consist of a church, to accommodate about 400 or 500 persons, with school-rooms for girls, boys, and infants, making provision for about 200 children. It is the intention to build contiguous residences for two priests. The church will be built in the usual cruciform shape. It will be 100 feet long, 35 feet wide, and 60 feet high from the first floor to the bell-turret. The chancel will be raised four steps from the level of the church, which will have its principal entrance looking towards the west, fronting the Wellesley-road, to be approached by an ornamental flight of two steps. There will be a sacristy and reception-room, each of which will measure 10 feet by 17 feet. The probable outlay for the church, schools, and priests' residences will be nearly 4,000*l.* The architect is Mr. Pugin, and the builders are Messrs. Smith & Son, of London and Ramsgate.

Chatham.—A new Roman Catholic church has been opened for divine service at Chatham, by the Roman Catholic Bishop of Southwark. The church stands near the station of the London, Chatham, and Dover Railway. Its external appearance is plain, being almost all brick. The nave is 100 feet long by 50 feet wide. There are a centre aisle and two aisles and two arcades of five arches each. The architect was Mr. Clutton.

Burgess Hill.—The new church for the parishes of Keymer and Clayton has been consecrated. The church stands on a slight eminence, about five minutes' walk from the Burgess Hill Railway Station. It has cost the committee the sum of 5,000*l.* The edifice is built of native red brick, with Bath stone dressings, and is in the Decorated style of architecture, consisting of nave, chancel, north and south transepts, south aisle, tower and spire, and vestry. The nave is 79 feet by 24 feet 6 inches, and is separated from the south aisle by three arches, with columns of Bath stone. It has three windows on the north side, and a clerestory of seven windows, with three round lights, four of which windows are on the south side, and three on the north, the south wall of the tower intercepting the fourth at the north-west corner. The chancel is 26 feet by 24 feet 6 inches, and between it and the nave is a moulded arch, with shafts and capitals carved in tracery. The chancel is lighted by four windows: that in the extreme east is a five-light, mullioned window, with tracery in the heads, and the others are three-light windows, two on the north and one on the south side. Under the east window, and above the altar, is the monogram "J. H. S." in gold, on a blue ground. The two transepts are 23 feet by 23 feet 6 inches. In the north transept is a doorway and porch, and above it is a wheel window: there are also six single-light windows. Both transepts are divided from the nave by an arch. The south transept has a wheel window above two double-light windows in the south end, and a single-light window on each side. The aisle has two quatre-foil windows and three others, one with three lights: it is 54 feet by 11 feet 6 inches in extent. The altitude of the church is 48 feet from the ground to the apex of the roof. The tower, which is situate at the north-west corner of the nave, is 40 feet high, and is surmounted by a spire of 61 feet. The inside of the fabric of the church is surface dressed, with decorations of coloured bricks, and has labels of red and black tiles round the arches. The pulpit is of red and black bricks, ornamented with others of various colours, and is lined with wood.

Steyning.—Some extensive repairs are about to be made to the old church of Steyning. It was agreed to raise 800*l.* by rates, if another 400*l.* were given by voluntary contributions. A committee was appointed, and tenders asked from several builders. Mr. Fabian, of Brighton, was lowest, and was therefore accepted, amounting to 900*l.* odd; but it is presumed the expense will not stop at this tender.

Maidstone.—The new church of St. Paul, Maidstone, since its erection, has had several additions in its interior fitments. The blank appearance of the wall at the east end of the church, under the high chancel window, has been relieved by the erection of a reredos, designed in the style of architecture corresponding with the church, the material used being Caen stone, with marble columns of varied kinds. The work has been carried out by Messrs. Sutton & Vaughan, builders, Maidstone, from designs prepared by the architects of the church, Messrs. Peck & Stephens, Maidstone. In addition to the reredos, Mr. W. Balston, and the Rev. E. Balston, have, at their own cost, fitted the windows of the chancel with stained glass, designed and executed by Messrs. Hardman, of Birmingham. The windows in the chancel are four in number, and are of two lights and tracery each. The subjects chosen are, in one window, the Gathering of the Manna by the Israelites in the Desert, and the miracle of our Lord feeding the multitudes. In the tracery of this window is the Angel bringing Food to Elijah. The second window represents the widow of Sarepta receiving the prophet Elijah, and the miracle of meal and oil, as also the changing of water into wine at the marriage feast at Cana. In the tracery is the subject of the Ravens bringing Bread to the Prophet Elijah. In the third window are the Last Supper and the Crucifixion, and in the tracery Melchisedec offering up Bread and Wine. The fourth window comprises the Descent of the Holy Ghost and the Baptism of our Lord.

Marlborough.—St. Peter's Church has been re-opened. The cost of the repairs—re-pewing and apparatus for heating the church, including architect, clerk of the works, &c., will probably amount to 2,900*l.*, in aid of which the parish has granted by rate 1,000*l.* An east window for the south aisle, &c., have been provided through friends. The work of restoration has been carried out under the superintendence of Mr. Wyatt, diocesan architect, by Messrs. Marquis & Monroe, of Bristol. Mr. Baverstock, of Marlborough, has acted as clerk of the works.

West Buckland (*Somerset*).—The old church of St. Peter has been rebuilt and consecrated. The entire cost of the work is about 1,000*l.* The new church is built in the Geometric style, and consists of a nave, porch, south aisle, and chancel, with organ and robing chamber on the north side. Underneath is a chamber containing Messrs. Haden's apparatus for heating the edifice with hot air. The aisle has a lean-to roof, with a clerestory of three trefoils over, in the wall of the nave, and is divided from the latter by an arcade of three arches, supported by monolith columns of Devonshire marble. The chancel arch is supported by short columns of the same material, which is also used for the shafts of the credence-table, east window, and sedilia. Some colour is introduced into the interior by the use of Ham-hill stone alternately with Bath stone in the several arches. Maw's encaustic tiles are also laid in bands round the walls of the nave, at the level of the roof corbels, and round the arches of the chancel and east window. The roofs are all open. Open seats have been introduced. The dimensions of the church are as follow, viz.:—Porch, 6 feet 6 inches by 6 feet 3 inches; nave, 43 feet by 18 feet; height to wall plate, 22 feet 6 inches; south aisle, 40 feet by 12 feet; chancel, 18 feet by 15 feet; height to wall plate, 15 feet; organ chamber, &c. About half an acre has been added to the churchyard; and at the west end, opposite the tower entrance, is placed a lich-gate, surmounted by a cross. The works have been executed by Mr. John Cock, jun., of Southmolton, from the designs of Mr. R. D. Gould, of Barnstaple, architect.

Ashford (*Devon*).—Mr. Dendle, of Barnstaple, builder, has recently completed a new chancel to the church of Ashford, under the superintendence of Mr. R. D. Gould, architect. The style is Early Decorated. The east window is of three lights, and painted by Gibbs, in memory of the Rev. — Blackmore, formerly vicar of the parish. The floors are laid with Maw's tiles. The roof is of oak, with massive couples, and the boarded spaces painted blue.

Llyswen (*Brecon*).—The parish church here has been re-opened for divine service. Nothing has been retained of the original building except the foundations and the baptismal font. It is built of native stone, and the old style, which has been preserved, is Early English. The chancel windows are plain lance-lights, and those in the nave double lance-lights with foliations. It has a porch of stained pine, with stone roof, the church also being covered with stone. The pews are of stained pine. The tower is placed at the south end. The church will accommodate about 200, and the cost amounts at present to about 950*l.* Mr. Charles Evans, of Talgarth, was the builder.

Stafford.—The enlargement of Christ Church has been lately commenced. It has been found necessary to add 320 new sittings, making a total of 870. The amount required is about 1,000*l.* or 1,100*l.* The contemplated alterations consist of an enlargement of the transept at each end to the extent of 13 feet; replacing of the side walls, which form the support of the roof on each side, by large Gothic arches, resting on stone pillars; and the addition of side aisles. The chancel will be carried back a distance of 15 feet, and the organ gallery will be brought forward 6 feet. The present high pews will be replaced by seats of a different construction. The builders are Messrs. Adams & Pemberton, of this town; and the architect is Mr. T. W. Goodman, of London.——The memorial stone of a new Wesleyan chapel has been laid on the site of the former edifice in Chapel-street, Stafford. The new chapel will be 55 feet in length and 45 feet in width, approached by three distinct entrances from the main street; the central entrance, consisting of a covered arcade, communicating with the two side entrances, which will afford access by stone staircases to the galleries, extending along three sides of the structure. At the rear of the chapel will be a small and three larger vestries. The general form of the edifice—a form necessitated by the impossibility of gaining side lights—is that of the basilica; and the style of architecture is Romanesque. The principal façade consists of a central gable, pierced with a large wheel window of stone; having aisles of lower elevation on its sides, the one next the minister's house screened from view by a square tower, about 80 feet high, rising above the main gable or clerestory, and crowned with a pyramidal roof and metal vane. The clerestory, affording the main source of light and ventilation, will be pierced with semicircular-headed windows, disposed in triplets. This portion of the edifice will rest on a continuous bressummer or supporting beam, superimposed on light cast-iron pillars, and relieved with large semicircular brick arches; these features openly exposed to view from the interior; the bressummer being wrought and moulded, and the arches having moulded labels and soffits. The interior of the chapel will be very simple in character, the roofs and galleries open-timbered, with ceilings of plaster beneath the subordinate spars. It will accommodate about 800. The exterior will be wholly faced with red pressed bricks, relieved with straw-coloured brick and local stone, disposed in voussoirs, corbel and string courses, and bands of variegated brickwork

in patterns. The building has been designed by, and is being executed under the direction of, Messrs. Hayley & Son, of Manchester, architects. The builder is Mr. Wm. Moss, of Stafford. The total cost, including warming apparatus, railing, and other charges, will be about 2,300*l.*

Over (Cheshire).—The new church of St. John, Over, has been consecrated. The edifice has been built chiefly at the cost of Baron Delamere. It is built of Runcorn stone, and has a tower and spire 140 feet high. It is in the Geometrical Gothic style of architecture, having nave, side aisles, chancel with chantry, and vestry on the north side, and porch, the under portions of the tower being a baptistery. The church has sittings for 550 persons, 460 free. The timbers of the roof are exposed to the church, the principals resting on carved corbels. The chancel arch is moulded, the inner order supported on grey Westmoreland granite shafts, having carved caps and corbels, the arch being enriched with sprigs of foliage. The floors are laid with encaustic tiles, those in the chancel and baptistery being of a more ornate design. The chancel and west windows of the nave are filled with painted glass by Messrs. Ward & Hughes, of London. The east window contains subjects from the life of our Lord. The church is heated by hot-water apparatus, supplied by Hancock & Son, of Fenton, Staffordshire. The gas-fittings are of polished brass, by Messrs. Peard & Jackson, of London. The organ is by Mr. Bevington, of London. The cost of the church was about 5,000*l.* Mr. John Douglas, of Chester, was the architect; and Mr. Richard Beckett, of Hartford, the contractor.

Blackburn.—The foundation-stone of an Independent church has been laid in Montague-street, Blackburn. The edifice is to accommodate nearly 1,800 persons, and is from the design of Messrs. Lockwood & Mawson, architects, of Bradford and London. Mr. H. Sellars is the contractor. It is estimated to cost upwards of 7,000*l.*

Doncaster.—The spire of St. James's Church is being taken down, and in its place one of greater dimensions and height will be erected. The spire now in course of removal was 10 feet in diameter, both at the square and octagon, and 95 feet high: the new one will be 120 feet in height; 13 feet across, both at the square and octagon; and superior in regard to the mouldings, especially at the belfry stage. Two bands of diaper work will divide the spire into three equal parts. The ashlar will all be of Ancaster stone. Mr. E. B. Denison, Q.C., defrays the cost, which will be 800*l.* Mr. Teale is the architect, and Mr. Athron the contractor for the work, which is to be completed by the 1st of November next.

Ainderby, Northallerton (Yorkshire). — Mr. Benson has been making a clock for the church of this place. It shows the time on two dials, each 5 feet in diameter; and strikes the hours on a bell of half a ton.

Ripley (Yorkshire).—A clock has been erected in the church here, at the expense of General Ingilby, the brother of the patron of the living. It strikes the hours on a bell of 10 cwt., and shows the time on a 4-feet dial. Mr. Benson was the maker.

Muston (near Scarborough).—The committee appointed to carry out the re-building of Muston church (which was partially unroofed and otherwise injured during a severe gale last winter), have recently received several designs for rebuilding the same; and have selected one submitted by Mr. W. B. Stewart, of Scarborough, architect, who has received instructions to advertise for tenders and to proceed with the erection of the building at once. The style is Early English. The plan comprises nave, chancel, north aisle, vestry, and south porch. A bell gable crowns the west elevation. It is proposed to use Whitby stone for the dressings; and stone from Gristhorpe (which has been given by Mr. Beswick), for the main walls.

STAINED GLASS.

Pennycross Chapel.—A memorial stained window has just been erected in Pennycross Chapel, near Plymouth, by Major Fitz Gerald, 33rd (Duke of Wellington's) regiment, together with a tablet to the memory of his wife. The window is the design of Mrs. Elphinstone Holloway, of Belair, near Plymouth, and was executed by Mr. Wailes, of Newcastle-on-Tyne. The tablet was executed by Mr. Bovey, of Plymouth, who superintended the work.

South Ossett Parish Church.—A stained-glass window has been put up at the east end of the chancel of this church to the memory of the late Mr. J. F. Carr, of Carr Lodge, a magistrate and deputy lieutenant, by his widow. The subjects of the window are arranged in three bands of colouring across the three lights, the panels being separated by narrow bands of grisaille white glass crossed by coloured stripes. The subjects are the following from the life of our Lord:—"The Annunciation," "Nativity," "Baptism," "Temptation," "Agony in the Garden," "Crucifixion," "Sepulture," "Resurrection," and "Ascension." The tracery contains "Our Lord in Glory," with angels on either side in attitudes of praise. The whole of these subjects are upon a diapered blue ground. The window was designed and painted by Mr. F. Preedy, of London.

Old Church, Ayr.—Two stained-glass windows, the production of Messrs. Ballantine & Son, Edinburgh, have been erected in this church. The large east window (in the Sailors' Gallery) consists of two upright lancet windows, and a central top shape. In the lancets are illustrations of "I was hungry and ye gave me meat," "I was naked and ye clothed me." In the top shape an anchor is introduced, in allusion to the Sailors' Gallery, above which the window is situate, with the motto, "Which hope we have as an anchor of the soul, both sure and steadfast." The whole of the compartments are surrounded by a bordering of green, white, and yellow foliage on a ruby ground. The subjects are surmounted with crocketed canopies; and in the basement, which is divided by capped pillars, the shield, crests, and monograms of the Boswell family, who erected the window as a memorial, are introduced. The other is a small twin light window on the right side of the pulpit, and is also a memorial. In the lights are introduced illustrations of Christ healing the sick, and Christ giving sight to the blind, and the subjects are surrounded by a bordering of white, blue, and green foliage on a ruby ground. The window in the Trades' Gallery was also erected by Messrs. Ballantine.

Limerick Cathedral.—The window, purchased by public subscription, for the west end of this cathedral, in memory of the late Sir Matthew Barrington, has just been erected by Messrs. Clayton & Bell. Extensive alterations in the tower have been made during the last five months for this memorial. The centre lancet has been opened to its original height; and the floor, which hitherto dwarfed the proportions of the window, is raised considerably higher, thus adding to the general loftiness of the building. The following is a list of the subjects forming the Barrington Memorial:—The left hand, or south, lancet, contains the "Pentecost," "Ascension," "Journey to Emmaus," "SS. Peter and John at the Sepulchre." The centre light is filled in with "The Lamb and Banner," "Noli Me tangere," "Women at the Sepulchre," "Christ bearing His Cross," "Agony in the Garden," "The Last Supper." The right hand, or north lancet, exhibits "Christ's Baptism," "Christ among the Doctors," "Flight into Egypt," "The Nativity." Each of these subjects is alternated by angels bearing in either hand a sceptre and regal orb. This is the third window which Messrs. Clayton & Bell have erected in this cathedral during the past three years. It has a character of its own, differing from the east window; and that placed by Mrs. Westropp in the south transept gives a variety in "the dim, religious light" which it pours down. Another window by the same artists is on its way for the cathedral. The memorial from members of the Barrington family is to be placed over the tomb of Sir Matthew.

PROVINCIAL NEWS.

Colchester.—A new Rectory-house is in course of erection for the incumbent of St. Leonard's, under the superintendence of Mr. H. W. Hayward, of this town, under whose direction the Parish Church has been partly restored. The contractor for these works is Mr. S. C. Mansfield, of Colchester and London.

Malvern. — We are asked to state that the foreman of the raising of the superstructure of the mansion at Blackmoor-park was Mr. Woodley, a bricklayer by trade, Mr. Bellamy being foreman carpenter.

Holbeck.—The foundation-stone of a new workhouse has been laid here. The old workhouse was a small and inconvenient building, very ill-adapted for a proper working out of the new Poor-law system. The guardians therefore determined, with the sanction of the Poor-Law Board, to erect a larger and more convenient building, in which a proper classification of the sexes could be carried out. Having obtained a plan from Mr. Hill, architect, the guardians advertised for tenders, and eventually let the various works necessary in the erection of the workhouse. Messrs. B. Woolley & Son are the principal contractors.

Inverness.—The promoters of the new hall meant to be erected in Union-street are meeting with fair success, nearly 1,500*l.* having been taken up in shares. It is intended to secure a site on the north side of the street, and near the centre, the lower part of the building to be occupied by shops. The proposed hall is meant to be 81 feet long, 50 feet wide, and 35 feet high, with seats for 1,200 persons, and provided with the usual adjuncts of such a place.

SCHOOL-BUILDING NEWS.

St. James's, Keyham (Devonport).—New parochial schools have been opened here. The schools consist of three large rooms, and together form the north side of a quadrangle, of which the church of St. James forms the south side: the east side will be hereafter occupied, should the means be procured, by a parsonage house, abutting on the church, and by two residences for the school teachers, which will adjoin the block of school buildings. The whole quadrangle is surrounded by roads, and will, when completed, form a group. The boys' school-room is L-shaped, the long arm being 55 feet long and 20 feet wide, and the return end, which inclines to the south, 2 feet long and 18 feet wide. A class-room, 15 feet by 16 feet 6 inches, is at the north, adjoining which is the porch or lobby, which is entered from the north. The girls' school-room, 56 feet long and 20 feet wide, is a continuation of the longer arm of the boys' school-room; but, owing to the conformation of the ground, on a level 5 feet above it. The western wall is pierced by an arch 15 feet by 12 feet, through which communication is secured, and provision made for the increased accommodation of large gatherings of persons for intellectual or social purposes. The whole of the buildings are constructed with limestone, in rand dom rubble work; the walls being 2 feet thick throughout. The window and door dressings are of Bath stone. The roofs are of Memel deal, are all open to the timbers, and of high pitch, and are covered with Delabole slate. At the west end of the ridge of the girls' school is placed an ornamental bell-cot, surmounted by a gilded vane. The style of the buildings has been designed with a view to harmonize with the church, which is of the Early Geometrical period, but rendered as plain and inexpensive as possible to meet the funds provided for the buildings. The schools and class-rooms contain an internal area of 4,319 square feet, and provide accommodation for 720 children. The designs have been furnished by Mr. J. L. St. Aubyn, architect, of London; and the work has been completed by Mr. T. May, builder, of Stoke Damerel, who erected the church of St. James fourteen years ago.

Newcastle (Staffordshire). — The Wesleyans have purchased the property formerly belonging to the corporation, and occupied as public baths situate in School-street; and on part of the site the erection of new schools, from plans gratuitously furnished by Mr. Roberts, of Trentham, has just been commenced by the contractor, Mr. Thomas Lowe, of Newcastle. The schools will be under one span of roof, and the roof will be of iron; the walls being of brick. There will be two large class-rooms, with other small rooms, and two dwellings, one for the chapel-keeper. The building will have a south-west frontage. It will be 80 feet long by 44 feet wide, and 15 feet high to the eaves. It will be fitted up with sanitary conveniences, and heated with Redfern's hot-air apparatus. The corner-stone has been laid.

Wordsley.—The new National School recently erected at Cote-lane, at a cost of about 650*l.*, has been opened. The room and gallery are built with two wings, forming a right angle with the gallery in the centre corner, with the view of giving the teacher an additional command of the whole school whilst conducting a lesson in the gallery. The clock and bell in the turret are for the most part the gift of Miss Girdlestone. The architect was Mr. S. Smith, of Stourbridge.

Tunbridge.—The foundation stone of the new school, at Tunbridge, has been laid. The building will be in the Gothic style,—Early Decorated Period. The total length of the building will be 204 feet, the width being 34 feet, and the height 40 feet to the top of the parapet, and 57 feet to the top of the roof. With the schoolmaster's residence on one side (slightly altered), and the chapel on the other, the new school will form three sides of a quadrangle, facing the street. An ornamental railing will form the fourth side, and the area will be laid out in gravel walks and grass plots

On the ground floor of the building will be the principal school-room, 74 feet long, 30 feet wide, and 25 feet high; the dining-hall for the boys, 40 feet long, 25 feet wide, and 25 feet high. There will also be on the ground floor four class-rooms, varying in size, the average being about 19 feet square. On the same floor will be a master's library, and a sixth form library. On the first floor there will be five other class-rooms and masters' sitting-rooms, or studies. The sleeping departments will be divided into two parts, consisting of 34 cubicles for the senior boys, one for each boy, and of dormitories for 27 junior boys, three boys to each dormitory. The compartments will be divided by a partition of framed deal, 7 feet high, the height of each dormitory and cubicle, from the floor to the highest part of the arched roof being 20 feet. In the central tower will be three bed-rooms, for the assistant masters. It is proposed to heat the principal school-room, dormitories, and dining-rooms by hot water pipes, and the other rooms by stoves. All the staircases are to be of York stone. The building will be faced with sandstone from a quarry close by the town, and will be dressed with Southborough sandstone. The architect is Mr. E. H. Burnell; the builder, Mr. G. Punnett, of Tunbridge; and the clerk of the works, Mr. W. L. Rowe.

Bedingham (*Norfolk*). — The new parochial school buildings here have been opened. The new school is situate on a rising ground, in almost the centre of the inhabited portion of the parish. The buildings themselves are of a simple character. They consist of a school-room and teacher's cottage, in the Domestic Tudor style, and are constructed of red bricks, a diaper pattern of dark grey bricks having been introduced into the facings of the cottage, and stone sparingly used in the gables and buttresses of the school. The school itself is 32 feet long and 16 feet wide, lighted from the north, east, and south. It has an open-timbered roof, with framed and braced principals, resting upon stone corbels. The main entrance to the school is through an open-timbered porch, with carved spandrills. The woodwork throughout is of deal, and in the principal construction has been wrought clean, stained, and varnished. The design was supplied by Mr. Thomas Lloyd, of Norwich, who also superintended the execution of the works, the contract for which was taken by Mr. R. Darby, of Bungay, by whom the buildings have been erected. The total cost of the new school and teacher's residence, including the purchase of the site, draining and fencing, and school fittings, was about 450*l.*

Oldbury.—Schools in connexion with the Church of England are to be erected at Oldbury. A short time since the committee advertised for designs to be sent in, and twelve architects responded to the invitation. The committee have selected the one sent in by Mr. Edward Holmes, of Birmingham. The building will comprise a boys' school, 70 feet long and 32 feet wide; a girls' school, 52 feet long and 18 feet wide; and infants' school, 42 feet long and 22 feet wide; and, with three large class-rooms attached, will accommodate nearly 550 children. A detached residence for the master will be erected on the site. The style adopted is Early English. The walls will be built of brick, with Bath stone in the dressings and heads of the principal windows. The roof timbers will be visible inside, and stained and varnished.

Horton (*Bradford*).—A new church school-room has been opened at Little Horton Green. It has been erected at the sole cost of Mr. F. S. Powell, M.P. The scheme includes a large church, which, we believe, it is expected will be opened before the close of the year. The present building consists of a school-room 67 feet by 21 feet, class-rooms 20 feet by 14 feet, a distinct gallery 16 feet by 12 feet, and lobbies for scholars and the general public, besides a small room for committee meetings. The style is the Domestic Gothic of the thirteenth century. The building has been undertaken by Mr. Israel Thornton, of Bradford; the total cost being about 1,700*l.* Messrs. Mallinson & Healey, of Bradford, were the architects.

Auchterless (*Aberdeenshire*).—The new schools at Badenscoth, in the parish of Auchterless, have been publicly inaugurated. The buildings, which will cost about 800*l.*, are constructed after a plan by Mr. Watt, Rayne, who is also the builder. The main part of the building, which contains the schools, faces the turnpike-road, and has a frontage 60 feet in length. The boys' school-room is in the north end, and measures 36 feet by 18 feet, and attached to it in the form of a projection, in the front, is a class-room of about 15 feet by 12 feet. The girls' school, in the north end, is nearly the same size as that for the boys, but there is no class-room attached. The height of the schools from floor to ceiling is 14½ feet. Dwelling-houses for both teachers are attached in the form of wings to the main building. At the back of the building are a playground and set of office-houses for each of the schools; and in the front there will be small gardens, the whole being enclosed by a stone and lime dyke.

Bampton.—The first stone of the new parochial schools was laid a few days since. The buildings will consist of two school-rooms, for 156 children, constructed of walling stone from the neighbourhood, with Bath stone dressings, and are being carried out under the direction and from the designs of Mr. W. Wilkinson, of Oxford.

COMPETITIONS.

New Offices for the Lancashire Insurance Company.—The premiums for the best designs for the new offices of the company, to be erected at the corner of St. Ann's-square, were awarded by the directors on Saturday. The first, of 200*l.*, was given to Mr. Thomas Turner, Glasgow and Belfast; the second, of 100*l.*, to Messrs. Pennington & Bridgen, Essex-street, Manchester; and the third, of 50*l.*, to Messrs. Johnston, Lichfield, & Risley, Red Lion-street, Manchester. There were twenty-nine competitors.

The Gibson Hospital.—The late Mr. Wyatt George Gibson, having by his will left 5,000*l.* for the building of a hospital for the town of Saffron Walden and the neighbourhood, the committee, acting in compliance with this bequest, have now under their consideration a variety of designs, which have been sent in for competition by architects, and are deposited at the town-hall for inspection. These each give a perspective and front elevation, and are severally in the Italian, modern and ancient Gothic, Elizabethan, Grecian, Old English, and Norman styles! The hospital will be erected in the Park-wall Allotment-gardens, adjoining, and is intended to front, the London-road.

The New Church Schools, Oldbury.—The committee of the new schools to be erected in connexion with the Church of England a short time since advertised for designs, and twelve architects responded to the invitation. The committee have selected the one sent in by Mr. Edward Holmes, of Birmingham. The buildings will comprise a boys' school, 70 feet long and 32 feet wide; a girls' school, 52 feet long and 18 feet wide; an infants' school, 42 feet long and 22 feet wide: with three large class-rooms attached, the schools will accommodate nearly 550 children. A detached residence, for the master, will be erected on the site. The style adopted is the Early English. The walls will be built of brick, with bath stone in the dressings and head of the principal windows. The roof timbers will be visible inside, and stained and varnished.

HOW TO DRESS A WALL.

IT is difficult sometimes to make an old wall look handsome. The *Gardeners' Weekly Magazine* describes how one was treated that had in its day warmed many fine crops of peaches, apricots, cherries, and plums. By degrees the trees had perished; and at last, when cleared of their branches and shreds, it had very much the appearance of having been afflicted with small-pox, for it was regularly and deeply pitted all over with nail-holes, the result of many years' training upon it of the fruit-trees. It might have been the spontaneous growth upon it of some lovely tufts of the wall linaria, or toad-flax, with little ivy-shaped leaves and lilac flowers, that put into the mind of my old friend the converting the wall into a perpendicular fernery. He first of all thrust into some of the large holes in the wall tufts of common polypody, making their creeping roots comfortable with turfy peat, and securing them from falling out by means of a piece of copper wire passed across the hole and held to the bricks by small staples. As these were found to flourish, and give the wall somewhat the aspect of a ruin, he began to make holes to plant others, and by degrees the wall was covered with hartstongue, asplenium adiantum, the wall rue fern, the mountain polypody, the alpine cystopteris, and dozens of others that bear drought patiently and naturally inhabit rocks and waysides. In the shady chinks next the buttresses he managed to coax the British maidenhair to make luxurious fillets of herbage; and at the foot of the wall there were tufts of lastrea, osmund royal, and other ferns which the wall itself refused to nourish. The majority of these held their verdure far into the winter: the hartstongues and common polypodies were usually quite green the whole year round; and during the winter their rich dottings of golden spores sparkled in the most cheerful manner against the dark background of sheets of ivy and red brick. Of course the wall itself was crowned with snapdragons, wallflowers, and other gay tenants of ruined towers, or pines, that make riot of man's work, and glorify the decay of art with the triumphs of nature.

WORKMEN'S DWELLINGS PAID FOR OUT OF WORKMEN'S FUNDS.

I READ the letter of "P." in the last number of the *Builder*, and desire this may be considered as a supplement to it. The Government hold a fund amounting to upwards of 363,000*l.*, being accumulated *profits* of savings banks, for which no interest is ever paid to the banks. I contend that this interest should be applied annually in erecting workmen's dwellings, and that the rents should accumulate in augmentation of the general fund. Assuming the calculation at the Mansion House meeting to be correct, dwellings for more than 100 *families* might be erected *annually*.

I have already laid the scheme before the Chancellor of the Exchequer, who has practically, at least, the control of the fund in question; but of course he is not anxious to give up the interest I require for accomplishing my object. The Savings Bank Act, passed in the reign of George IV., does not require the Government to pay interest for this profit fund; nor does it authorize the Government to retain it. Then I argue that as the profit arises from a *trust* fund, it ought to be applied for the benefit of the *cestui que trust*; or, failing to find him (which is the case), for the benefit of the class to which he belongs.

If only a portion of the energy shown by the gentlemen who are promoting the erection of dwellings for the working classes were devoted to embodying my scheme in a Bill to be presented to Parliament, any appeal to the public for funds would be rendered unnecessary. W.

LAW OF THE FOOTPATH.

SIR,—Thanks for your sensible notice on this subject in your last *Builder*. But will you once again implore all gentlemen, rich and poor, to spit into the road and not on the footpath? The present practice, at all times most offensive, is now very grievous to those who are obliged to

FOLLOW THE FASHION.

P.S. Could not a clause be inserted in one of the Bills now before Parliament, regulating the thoroughfares, inflicting a fine for making the pavements filthy?

THE BURIAL OF EDWARD I.

THE writer of the excellent article "Twice Buried," contained in your impression of the 20th June, appears, notwithstanding the evidently careful research which his paper manifested, to have accepted upon questionable grounds the statement which he records, that the heart of Edward I. was buried in Palestine. There is very little doubt that such was the monarch's dying wish, and that he gave injunctions to that effect, as also that his body should not be buried, but should be carried at the van of the English army until Scotland should be reduced. But, although he seems to have bequeathed 32,000 pounds of silver to defray the expenses of transporting his heart to the Holy Land, little or no attention appears to have been paid to this wish, or, rather, it was perhaps considered unadvisable to comply with it. His body was removed from Burgh, where he died, to Waltham, where it lay in state seventeen weeks, and was subsequently interred in Westminster Abbey. In 1774 the body was exhumed at the solicitation of the Hon. Daines Barrington, with the view of ascertaining the truth of certain historical allegations, to which some doubt had been attached. The height of the king appears to have been, as nearly as possible, 6 feet 2 inches; but, so far as any examination was made, there was nothing to indicate any disproportionate length of the legs, so that the name of "Longshanks" which he acquired appears hardly to have owed its origin to such a cause.

Your readers, if they desire, will find a very interesting paper on the subject, written by Sir Joseph Ayloffe, in the third volume of the "Archæologia," published by the Society of Antiquaries of London in 1775. W. M. B.

SECOND PORTION OF WORKS SELECTED BY PRIZEHOLDERS IN THE ART-UNION OF LONDON.

From the Royal Academy.—Sit Up, by A. Provis, 50*l.*; Sophia Western, S. Sidley, 40*l.*; Meaning Mischief, A. F. Patten, 38*l.*; Fort d'Ambleteuse, J. J. DECISIONS UNDER METROPOLITAN BUILDING ACT.

USE OF IMPROPER MATERIALS.

SEVERAL builders were summoned to *Hammersmith Police Court*, before Mr. Dayman, by Mr. Gutch, the district surveyor of Paddington, for having constructed the walls of certain houses of bricks put together with lime mixed with a large proportion of mould and mud of an inferior quality and insufficient strength; and for not enclosing the said houses with walls constructed of brick, stone, or other hard and incombustible material, properly bonded and solidly put together with mortar or cement.

It was agreed that the summons against Mr. Jonathan Brown should be the first taken. (Mr. Clarke, solicitor, appeared to conduct the proceedings for Mr. Gutch; and Mr. Besley appeared to defend Mr. Brown). The evidence given was confined to one of his houses, known as the "Gateway House," in Westmoreland-road. Mr. Clarke called the district surveyor, and he said he had examined the house, and found that a mixture of mud and lime was used instead of proper mortar. He produced a portion of the material taken from the walls of the house. The walls were consequently not properly put together. He said what he produced were the scrapings from the macadamized roads, with a very considerable portion of horse-dung. The house would not stand, in his opinion, any great strain. In cross-examination he only complained of the mortar used in the inside of the house. He had not seen any signs of cracks in the exterior. Mr. Besley—"Do you think the house will fall down in the course of the next ten years?" Did not think it would.—"In the next twenty-five years?" Could not say. If there was any great pressure it might.

Mr. Ellis, surveyor, said he had examined the house, and the mortar was composed of mud and a little lime. It was impossible that it could unite as it ought with the bricks. All he could state was that it was not built with a proper material. He could not say it would not last twenty years: it would depend on how it was used.

Mr. Besley then called Mr. Parker, surveyor, and he said he had been accustomed to survey buildings for twenty-three years. He had examined the houses, and the walls were solid and capable of resisting as much pressure as other ordinary houses. He also produced some of the mortar, and said one-half of the houses were built with the same sort. There was no sign of want of solidity in the walls, and therefore no danger could arise from it.

Mr. Clarke submitted that the magistrate should inspect the buildings; but he declined, as he always felt it his duty to decide by the evidence adduced.

Mr. Dayman considered that Mr. Gutch had only been actuated by a desire to discharge his duty; but he thought a sufficient case had not been made out against Mr. Brown. The evidence was very conflicting, but still no one had said that the houses would not stand for twenty years, and therefore the public were protected for that period. It would be, under all the circumstances, hard on the builder to decide against him.

The summons was ultimately dismissed.

In a similar case against Mr. Kellond, as to the houses 4, 5, and 6, Burlington-road, Paddington (where a cross wall fell during the works), contradictory evidence of the same kind was given on both sides. It was urged, too, by the builder, that the work had advanced considerably before the district surveyor had attended. The cause of this, Mr. Gutch said, was illness through overwork in surveying the erections put up in his district on the occasion of the Royal Procession. The magistrate wished the matter to go to arbitration, but the builder would not consent; and ultimately Mr. Dayman said he should dismiss the summons: at the same he wished it to be known that he was not altogether satisfied the building had been erected within the meaning of the Act.

LIGHT AND AIR.

Martin v. *Clark.*—This was a motion (in the Vice Chancellors' Courts, June 26, before Vice-Chancellor Sir W. P. Wood) to restrain the defendants, the Committee of the Hampden Gurney Memorial Schools, now in course of erection in Upper Berkeley-street, Hyde Park, as a testimonial to the late vicar of St. Marylebone, from continuing the building so as to interfere with the ancient rights of the plaintiff, who was a tailor, and the owner of two houses immediately adjoining the intended schools.

The motion was opposed on the ground that the plaintiff had acquiesced in what had been done by the defendants, and that he had been so dilatory in the matter as to have lost his right to equitable relief.

The Vice-Chancellor held upon the evidence and the communications that had passed between the parties that the plaintiff had not precluded himself either by acquiescence or delay from his right to relief in this court. It might, no doubt, be a very proper case for the parties to arrange between themselves, but in the meantime the plaintiff was entitled to an inquisition to restrain the defendants from further raising any part of their buildings, so as to hinder or impede the access of air and light to the plaintiff's houses to his damage and injury.

RATING.

The Queen v. Morrish: at Bail Court.—The defendant was the contractor for supplying the public with refreshments in the western section of the International Exhibition of 1862. By the agreement entered into between the Commissioners and the defendant he had the right of selling refreshments to the public in a portion to be appropriated to the contractor of 40,000 square feet. The contractor was to erect all requisite counters, and to make cellars, &c., requisite for carrying on the business of the refreshment department. A poor-rate was made for the parish of Kensington on the 11th of August. The defendant's name was placed on the rate. The defendant appealed against the rate, and a special case was framed for the opinion of this Court. The great point was whether this was such an occupation as rendered the defendant liable to be rated. It appeared that the defendant had a private entrance to the department, but he was locked out of the other parts of the Exhibition.

Mr. Prentice, in support of the rate, urged that this was an occupation by the defendant for his own benefit, and that that fact made him liable. He had a separate entrance, and had the exclusive right to the 40,000 feet, and he had made cellars.

Mr. Justice Wightman said, the licence to sell refreshments upon the premises of the Commissioners would not of itself be such an occupation as would make the person who had the licence liable to be rated. It seemed to the Court that all the erections were merely subordinate for the exercise of the licence. Taking the whole matter together, it was never in the contemplation of the Commissioners that he should have the occupation of that portion in which the licence was to be exercised. The defendant could not have turned out the Commissioners if they were within that portion of the building. The defendant had not the exclusive occupation.

Judgment for the appellant.

MARYLEBONE SCHOOL OF ART.—The first annual public meeting and presentation of prizes will take place in the Court-house, Marylebone-lane, on Tuesday evening, the 14th of July next, at eight o'clock. The President in the chair. Those who feel interested should attend.

Books Received.

Beeton's Dictionary of Universal Biography. London: Beeton.

MR. BEETON'S dictionaries are valuable additions to the library: from their close type and economical production they must carry interesting and useful knowledge into hands heretofore excluded from much which he has since presented to them. There is one feature in this new dictionary of which we must make a note. It includes brief biographies of living men who have made themselves eminent. The advantage of this would be unquestionable could it be done in an unobjectionable and efficient manner; but many critics will demur to its propriety or discretion in a universal biographical dictionary. We can observe a kind of trimming of terms between life and death, so as to adapt the matter to the possible or eventual death of the living, which is not pleasant: in some cases this may arise from a fear that even while the compiler writes the subject of the biography may be no longer in the land of the living; and indeed the reader must be often mystified and uncertain whether it is meant to be inferred that while the compiler wrote the subject of his memoir were really dead or alive; and sometimes must be led to believe that he was dead while in truth he was yet alive. Thus, for example, we find it said of Professor Simpson, of Edinburgh, who was certainly alive when the notice of him here was written; as, in all probability, he still is; that "he was professor of midwifery in the University of Edinburgh, and physician accoucheur in Scotland to her Majesty Queen Victoria." Of his scientific knowledge, it is said that it "was both various and profound." Now, it may be easy to fence so far with these objections by replying that her Majesty being now a widow, he can no longer be her accoucheur for Scotland; but even though he had resigned his professorship, the whole tenor of the notice is prepared clearly for the eventuality of the death of a then living man, and gives the false impression accordingly that he is already dead. On the whole, however, the work is well and ably done.

VARIORUM.

"The Hovel and the Home; or, Improved Dwellings for the Labouring Classes; and how to obtain them. By Ebenezer Clarke, jun. Tweedie, Strand." Although this pamphlet has specially in view the interests of several societies, assurance, building, and others, in some of which Mr. Ebenezer Clarke, jun.'s, name appears, nevertheless it contains much useful matter on the subject of which it treats.——A paper by Mr. Serjeant Burke, read at a general meeting of the Society for Promoting the Amendment of the Law, on the 1st of June, on "The Present State of the Law of Copyright in Literature and the Fine Arts, with a View to its Amendment," has been printed in a separate form. In this paper Serjeant Burke points out the salient defects of our present copyright law, and proposes that the whole of the Acts relating to copyright should be consolidated into one statute or a single code, some of the chief clauses or heads of which he suggests. Something evidently ought to be done and must be done to reform our copyright system; and a simplification into one code seems a good idea to begin with.——Catalogues of the Maps and Plans and other Publications of the Ordnance Survey of England and Wales, Scotland, and Ireland, up to a recent date, have been printed for sale at her Majesty's Stationery Office, under the authority of Colonel Sir Henry James, R.E., F.R.S., the director, at Southampton; so that any special map, parochial, county, or other, with its price, may now be ascertained without trouble or delay.——Amongst the valuable reading books published by Messrs. Hogg & Sons, we may especially point to "Half-hours with our Sacred Poets," edited with biographical sketches by Alexander H. Grant, M.A. This selection, which is made with good discretion, ranges from Richard Rolle (134-9), and Chaucer (1328 to 1400), down to Tennyson and Mrs. Fotherby, and includes the works of eighty-two poets. It is a book to last.——"The Flower of Christian Chivalry," from the same publishers, is another of their series of "Books with a Meaning." It includes sketches of the life of St. Bernard of Clairvaux, Savonarola, Pinel, Granville Sharp, and others.——The July number of "London Society" has some good papers, especially one on "Dickens's Dogs," proving the genial novelist to be the "Landseer of fiction." The Number is

illustrated by T. Morten, M. Morgan, W. Brunton, Walter Crane, W. M'Connell, J. D. Watson, and James Godwin: enough, surely, for a shilling.

Miscellanea.

CHURCH-BUILDING ACCIDENT IN CHINA.—At Canton an unfortunate accident has occurred to the new church which was just on the eve of completion, the tower of which fell down; whether from bad foundation or bad material in the building is not yet known.

THE WELLINGTON MONUMENT FOR ST. PAUL'S. The public impatiently ask, and well they may, what progress is made with the monument and monumental chapel in memory of the late Duke of Wellington, determined on some years ago? Perhaps Mr. Stevens, who was commissioned to execute the monument, will enable us to give a quieting answer?

A BOAT! A BOAT!—A suggestion which appears to be "out of the question" sometimes contains an unseen germ; so we print the following:—May I ask through your pages whether it would be impracticable in building a ship to build *into it* a boat whose bottom should go with the outer timbers of the ship; but so contrived that, in case of great emergency, the boat could be knocked out readily, and drop into the sea, without the usual difficulty of lowering a boat in such times of excitement. If a boat so built in, or fastened in, could have a false bottom containing the oars and ropes, so attached that she would be self-impelled into the water, perhaps half a minute in time of extreme emergency might place a life-boat at the service of a sinking ship.—H. B.

A SUBSTITUTE FOR TURPENTINE.—Mr. Cave, M.P., chairman of the West India Committee, has received a letter from Jamaica containing a scheme which has caused great interest in the island, for using rum, instead of spirits of turpentine, in the preparation of paint. The present price of turpentine is 10s. a gallon; that of rum in bond from 1s. 4d. to 2s.; but the duty amounts to 10s. 2d. in addition; and it is suggested that rum rendered unfit for drinking, either by a mixture of creosote or naphtha, such as is now used in methylating spirits of wine, might be admitted duty free as a desiccant of paint, for which it has been proved by experiment to be well fitted. The revenue would not suffer, as the spoilt rum would come into competition with a duty-free article, and considerable relief would be given to the painting trade, which is in many places almost brought to a stand by the high price of turpentine. It is understood that Mr. Cave has brought the question before the proper authorities, and that it is still under consideration. The stock certificates to bearer, the issue of which is now authorized by law, are not expected to be put forth until January.

THE ROYAL FORESTS IN ESSEX.—The select committee of the House of Commons appointed to inquire into the condition and management of the Royal forests in Essex sketch in their report the various inclosures which have taken place in these forests. With regard to Waltham Forest, they think that the forestal rights of the Crown, which have been sold to such great extent, though producing nothing to the revenue, have contributed to keep in a state of wild forest land a considerable space of open ground in the neighbourhood of the metropolis, which has been a source of health and recreation. They report that a considerable extent of ground in Waltham Forest has been inclosed without any consideration being paid for the forestal right of the Crown; and they recommend that immediate steps be taken by the Crown to assert its right and to abate such inclosures. With regard to the remaining portion of Waltham Forest, they recommend that the sanction of Parliament be obtained for its inclosure; that the rights of the several parties interested be ascertained; and that provision be made, partly by these means and partly by purchase, for securing an adequate portion of the forest for the purposes of health and recreation. With regard to the King's Wood, Hainault, they report that the result to the Crown by the disafforestation has been that it now possesses a compact estate in severalty of nearly 1,900 acres, let on lease at a rental of 4,000*l.* a year, instead of a doubtful income of about 500*l.* a year from lands in a state of neglect, and subject to all kinds of waste and encroachment; and that all the expense of conversion to a profitable condition has been defrayed out of produce growing on the estate itself.

"ARCHITECTURAL ALLIANCE."—The general meeting was held in London on Wednesday last. We may return to it.

HAMPSTEAD HEATH.—In the House of Lords Lord Chelmsford, when their lordships were in committee on the Leases and Sales of Settled Estates Act Amendment Bill, moved the insertion of a clause giving power to Sir Thos. Wilson to get rid of the obligations imposed upon him in regard to Hampstead Heath. After some little discussion the clause was agreed to.

SANITARY AND SOCIAL PROGRESS IN ITALY.—The Italian Government is directing attention to the sanitary state of the country, and to the establishment of institutions for the improvement of the condition of the humbler classes. A report on vaccination of considerable interest has been drawn up by Dr. Carenzi, the Conservator of Hospitals. A meeting was lately held at which the Prince Amédée (the Duc d'Aosta) and the Minister of instruction were present, to consider the best means of giving employment to the poor and industrious.

SCULPTURE BY MR. JOHN STEELL, R.S.A.—The Standard Life Assurance Company is at present erecting a new office in Sackville-street, Dublin. The front to the street is of the Grecian type of architecture, with columns and pediment; and the tympanum is to be filled with sculpture. The subject is the parable of the Ten Virgins—a subject originally selected by Mr. Steell for the Edinburgh office, some twenty years ago. The figures are about life-size, and are boldly relieved. The work is executed on four blocks of freestone, from Binny Quarry.

WORCESTER DIOCESAN ARCHITECTURAL SOCIETY.—The first excursion for the present year has just taken place. The members and their friends assembled at the Evesham station, and proceeded in carriages to the following churches:—Bengeworth, Offenham, South and Middle Littleton, and Cleeve Prior, the party being everywhere welcomed by the incumbents and churchwardens. The architectural characteristics of the various buildings were pointed out by Mr. J. Severn Walker, who also mentioned a few historical particulars connected with the parishes visited, all of which, except Cleeve, formerly belonged to the Abbey of Evesham, and at most of them the abbots had manor houses or granges. Returning to Evesham, a party of between twenty and thirty dined at the Crown Hotel. The Rev. F. Hopkinson, LL.D., occupied the chair, and Mr. Severn Walker the vice-chair. The usual loyal and other toasts were drunk, after which a peep was taken at the Evesham churches on the way to the station; time not permitting Hampton church to be visited, as had been intended.

CLIFTON SUSPENSION BRIDGE.—The wire ropes which span the Avon, and which connect the piers on the Somersetshire and Gloucestershire sides of the river, are now finally adjusted. Six out of the nine are on one level, the two centre ones being 3 feet apart, and the others on each side of them 1 foot apart. On these a platform of boards placed transversely and bolted to the wires will be formed. Three feet and a half above this level are two ropes directly over the outside of the wires of the platform, which form a handrail; and 14 feet above the platform is the rope on which the "traverser" is fixed. This "traverser" is a frame of iron, with two pulleys running on the rope with a pair of light blocks on each end, by which are suspended the boards to be carried out for the platform and afterwards the links for the bridge, the latter, weighing 6 cwt. each, being carried out singly. A similar machine will be placed on the Leigh-woods' side, and each will carry out, on the whole, 1,500 links. On Thursday the cradle, which is constructed of light angle irons with wooden floor, and runs on four pulleys attached to the handrail, was put together and lowered down the wire ropes. It is about 7½ feet square, weighs 7 cwt., and is capable of carrying five or six men. It is so constructed that the six wires of the lower level run through it, leaving a space for the men to adjust the boards of the platform transversely on the wires while they are inside the cradle. The construction of the platform is now being proceeded with: it is being connected to the handrails by ties of hoop iron and bolts, 5 feet apart, and when complete will make a secure pathway, 7 feet wide from pier to pier. From this platform will be fixed some 350 tons of iron for one side of the chains, and the whole temporary bridge will then have to be taken down, and the wires again payed out at a sufficient distance to enable the men to form the chains of the other side of the permanent bridge.

SCULPTURE.—Mr. Stirling, of Liverpool, has just completed a statue of H.R.H. the Prince Consort, life size, dressed in the robes of a Knight of the Garter. It is to be sent to Hastings, and to occupy a niche in the Memorial Clock Tower just completed there, of which we published a view some little time ago.

GAS.—The Salisbury gas company intend reducing the price of their gas to 5s. 6d. per thousand feet.——The Cuckfield company who last year reduced their price from 10s. to 8s. 4d., speak of another reduction. The former reduction appears to have brought a considerable surplus, which is left as a reserve fund, but does not yet suffice for a dividend. The directors are, therefore, taking the right way to secure one in time to come.——The Kelso gas company have declared a dividend of 10 per cent.

PETROLEUM EXPLOSION.—A great explosion and conflagration took place a few weeks since at Oil City, Pennsylvania, by the petroleum in some boats catching fire. Oil City town was shaken by the explosion, as by an earthquake. The noise was heard twenty miles distant, and the conflagration was seen as far. Great damage was done to property by the fire. No other substance, it appears, gives out such dense smoke as burning petroleum.

"GLOUCESTER DEANERY."—Sir: In the *Builder* of June 20th we observe a capitally-written article upon "Gloucester Deanery." We will, however, thank you to supply an unintentional omission in it. The restoration of the west fronts are being carried out under the superintendence of Mr. Fulljames, the able architect of the *Dean and Chapter*, the cost thereof being paid by them. All the other works will be carried out under our superintendence, as the architects to the *Dean* of Gloucester. We regret, however, much as we desire to restore the interior to its original integrity, that the limited outlay contemplated will prevent our doing so to the fullest extent of our wishes.—WARING & BLAKE.

BEDFORDSHIRE ARCHITECTURAL SOCIETY.—The annual public meeting of this society has recently been held. A large party assembled at St. Paul's Church, and having, attended by the Vicar, spent some time in its inspection, proceeded to St. Mary's for the same purpose, where they were met by the Rev. C. Brereton, who with Mr. Hurst pointed out the more remarkable features of the building, and the recent alterations and additions. Mr. Bloxam also remarked upon the early portions of the church, especially the upper stages of the tower. The Old George Inn was next visited, as were also the remains of the House of Grey Friars, called the "Priory." St. Peter's Church was the last object which engaged the attention of the party, who were then entertained by the Rev. W. G. Fitz Gerald at St. Paul's Vicarage, and by the Rev. J. W. Haddock, hon. secretary of the society, at his residence. The meeting took place in the afternoon at the Working Men's Institute in Harpur-street. Mr. Bloxam read a paper, in which he gave an account of various brasses and other objects of interest connected with Bedfordshire. Mr. C. L. Higgins then read a paper on the Monuments in Turvey Church; the Rev. W. Airy one titled "A Monograph of Bedfordshire Domesday;" and Mr. G. Hurst one on the Churches of Bedford.

CITY IMPROVEMENTS.—Several cases of compensation for improvements in the city of London have just been decided by special juries, under the presidency of Mr. Under-Sheriff Burchell, at the Sheriff's Court, Red Lion-square. In the first case the trustees of Lady Hatton's Charity, or "God's Providence," as it was called, for the poor of St. Andrew's, Holborn, was heard on Friday. The original sum of 250*l.* was vested in 1454 at Smithfield-bars, and the rent in 1779 was 35*l.* a year, and it had increased in 1850 to 110*l.* The premises, in the occupation of Messrs. Preston & Sons, chymists and druggists, were required for the new Metropolitan Meat and Poultry Market. The claim was 3,630*l.*, and the jury awarded 3,000*l.* In the next case Messrs. Preston & Sons claimed compensation for being compelled to remove from the premises, where their family had carried on business for 100 years. The claim made for such removal and loss sustained was 9,057*l.*, and after a long inquiry the jury gave 4,205*l.* 10*s.* In the third case, a claim by a Mr. Dismore against the corporation for premises required for the same purpose, a verdict was taken by consent for 800*l.* During the hearing of the cases evidence was given of the great increase in the value of property in the city of London in consequence of the several projects started, and it was stated that "fabulous" prices were now demanded.

NEW BARRACKS FOR THE HOUSEHOLD CAVALRY. A new site is being looked out for by the authorities on which to erect a barrack for a regiment of the household cavalry, the lease of the Knightsbridge Barracks having nearly expired. Chelsea or Kensington will probably be the spot selected.

INDIAN RAILWAYS.—Mr. Jules Danvers, in his annual sketch of the position of Indian railways, of which he is Government director, reports that 2,528 miles are now open for passengers and goods. The great triangular railway connecting Madras with Bombay, Bombay with Delhi, and Delhi with Calcutta, will be complete in about twelve months more. The amount already raised for these works is forty-eight millions and a quarter, which large sum is in the hands of only 31,400 persons, an average of 1,500*l.* each. The shares are evidently used for permanent investments almost exclusively.—*Spectator.*

DISCOVERY OF ROMAN REMAINS IN CHESTER.—The remains of a Roman hypocaust have been discovered on the site of the old Feathers Hotel, Bridge-street, which is now being pulled down for the purpose of town improvement, by the Marquis of Westminster. The extent of the hypocaust is about 23 feet square, height of the pillars 32 inches, quadrangular, with a cap of the uniform size of 12 inches, distance between each pillar respectively 13 inches and 6½ inches, number of pillars already exposed about 60. The tiles (perforated) from age and other causes, were fractured when discovered, with but few exceptions. Lord Westminster has ordered that the pillars, &c., remain as discovered until he visits Chester.

ANOTHER NEW METAL—SIDERIUM.—The new metals, we suppose, are envious of the new asteroids, and are doing their best to keep pace with them in revealing themselves to modern science. Another new metal has just been discovered. In the development of his invention for the production, on a commercial scale, of the metal magnesium, which it is hoped will at no distant period be extensively used as a substitute for silver, Mr. E. Sonstadt, of Loughborough, has, it is said, discovered a new metal in the "carcasse" remaining when the chloride of magnesium is obtained by evaporating and igniting the chlorides of magnesium and sodium. In many of its reactions this new metal corresponds almost precisely with iron, for which metal it has probably hitherto been mistaken. The new metal appears, at present, to occur invariably in connexion with magnesium, which cannot be entirely freed from it.

STATUES FOR A CHURCH AT LIVERPOOL.—Two statues, one of the Virgin and Child, the other of St. Joseph, from the studio of the Roman sculptor, George Maria Benzoni, have lately been placed in the church of St. Bartholomew, Rainhill. The height of each statue, says the local *Journal*, is 3 feet 9 inches, and they are executed in the finest Carara marble. The statue of the Virgin, while still in Rome, was, by the order of the Pope, brought to the Vatican for his inspection, when he blessed it. It remained at the Vatican, by order of the Cardinal Antonelli, till after the 16th of March, 1863 (on which day the Papal Consistory was held), that the assembled cardinals might have an opportunity of inspecting it. The figure of St. Joseph represents the record of the Evangelist,—"Joseph rising up from sleep, did as the angel of the Lord had commanded him." The statue is modelled after one of the same saint in the possession of the Pope. The figure of St. Ann teaching the Virgin, in the great Exhibition of 1862, in marble, was by the same artist.

STRANGE ACCIDENT IN PORTSMOUTH DOCKYARD.—In the north-east portion of the dockyard is a large iron salt-water tank, standing on lofty iron columns over some stores of oak planking. It is 160 feet long, 40 feet wide, and 5 feet deep, and is kept filled with salt water to assist in quenching any fire which might break out in its neighbourhood. About 70 feet of the iron plates forming one side of the tank have given way, and been hurled with the water into the roadway. The tank was built up of cast-iron flanged plates, fastened together with bolts, nuts, screws, &c., in the usual manner. Some of the plates have been separated at the fastenings, the nuts having been torn off the screw ends of the bolts by the pressure of the water. In other instances the iron plates have been broken through diagonally, like pottery ware. The weight of the water in the tank was calculated at 890 tons, and the pressure against the side at about 50 tons. The wrought iron tie-rods in the interior of the tank were very much eaten away at their junction with the cast-iron plates, where they had been submerged in the salt water.

ST. ALBAN'S ARCHITECTURAL SOCIETY.—The eighteenth anniversary meeting of this society was held in the Assembly-room, Townhall, on Wednesday, 17th ult. The chair was taken by the Rev. Dr. Nicholson, vice-president. The Rev. O. W. Davys, of Wheathamstead, read a paper on "Local Peculiarities in Architectural Designs."

ARCHITECT'S CERTIFICATE ON BUILDING CONTRACT.—Where a contract was that the builder should be entitled to draw, "provided the architect shall certify that the works are carried out to his satisfaction," it was held that the certificate need not be in writing, but that a verbal approval was sufficient.—*Roberts* v. *Watkins.*

"MILTON HALL," FOR CAMDEN-TOWN.—Mr. Ludbrook is erecting a commodious hall adjoining his residence in Hawley-crescent, Camden-town, for religious purposes. The building will comprise a large hall to seat 400, spacious school-room, classrooms, to be used without regard to sect or party; but smoking and intoxicating drinks will be prohibited. The hall, which is in the Tuscan style, is being built by Mr. William Proctor, and will cost about 1,000*l.* It will be opened in August next.

THE COLCHESTER ART EXHIBITION.—A glance at the catalogue of this Exhibition of the Colchester Literary Institution at the Town-hall, which was opened on the 22nd June, shows it to have been an interesting collection. Among the many good and valuable works of art we observe a full-length portrait, by Gainsborough, of the Rev. Sir Henry Bate Dudley, Bart., never before exhibited; the contributor being Mr. J. Oxley Parker.

THE KEADBY BRIDGE AND THE BRIDGE ACROSS THE OUSE.—An Act for the erection of a bridge across the Ouse in connexion with the North Eastern Railway (Hull and Doncaster Branch), has just passed a committee of the House of Commons. The bridge is to be made with openings of 120 feet span, whilst the Keadby Bridge openings are only 60 feet. One of the vessels sunk by a collision with the Keadby bridge is embedded in the Trent, at the foot of the bridge, and some of the piles are being driven right through it.

COMMISSION ON SALE OF PROPERTY.—The rule which is well established was affirmed recently by the Court of Common Pleas, that where an auctioneer entrusted with the sale of an estate is the *causa causans* of the sale (as, for instance, by advertising and putting up the estate for sale by auction, which the afterwards purchaser attended), he is entitled to his commission, even though before the actual sale the vendor withdrew the property from sale by him.—*Green* v. *Bartlett.*

ARCHITECTURAL ASSOCIATION.—VOLUNTARY ARCHITECTURAL EXAMINATION CLASS.—On Saturday, 4th inst., the members will go to St. Alban's by the train leaving Euston-square at 2.15 p.m. Next Wednesday (8th July) Mr. C. H. Smith has consented to follow up his remarks on geology by treating of limes and cements. After that day, during the vacation of the Association, the meetings of the class will be held on Fridays. Mr. Chas. Fowler will lecture on Foundations, Shoring, and Under-pinning on Friday, 17th July, 1863.

NEW MUSICAL HALL AT DEPTFORD.—The West Kent Music Hall Company (Limited) proposes to raise a capital of 30,000*l.* in 6,000 shares at 5*l.* each (1*l.* per share payable on allotment), for the purpose of purchasing the lease of a piece of ground for a place of amusement, and erecting on a portion of it a music hall for Greenwich, Deptford, New Cross, Lewisham, and surrounding neighbourhoods. The music hall is to be capable of accommodating 3,000 persons, and will be in the Renaissance style. The ground is said to be extensive, and is, we suppose, to assume the form of tea-gardens. It is at present connected with the "Lord Duncan" Tavern.

PUBLIC WORKS (MANUFACTURING DISTRICTS) ADVANCES BILL.—In committee on this Bill the Chancellor of the Exchequer said it was estimated that, should the present distressed state of Lancashire unhappily continue during the ensuing winter, it would be necessary within the next twelve months to expend a sum of about 2,000,000*l.* on useful public works in the manufacturing districts; of which sum about 1,500,000*l.* would probably be required before the commencement of next session. That sum he proposed to make up of 300,000*l.* now available, and 1,200,000*l.* which he moved that the Treasury be authorized to issue out of the Consolidated Fund, upon the security of local rates. The motion was agreed to.

THE KINGSTON-ON-THAMES DRAINAGE.—After many debates and much difference of opinion, the town council of Kingston-on-Thames have unanimously passed a resolution to the effect that "the drainage committee be now instructed to obtain the names of some competent gentlemen, not less than four, from whom the council may select one to advise the committee as to the best way of carrying out the plan lately adopted by the council for the drainage of the borough, and also to superintend the same; and that the committee lay the names, with the terms of each, before an early meeting of the council."

MR. CHURCH'S PICTURE OF ICEBERGS.—Mr. Church, the American painter, who exhibited the "Falls of Niagara" some time since, went out with the gentleman who published recently a book called "After Icebergs with a Painter," and he now shows his share of the gathered fruit in the shape of a large picture of the "sensational" class, very interesting and very clever. If Mr. W. Beverley had done it for Mr. Gye, at Covent Garden, we should have considered it *just* possible that he had thought as much of effect as of truth: but there seems no reason to believe that Mr. Church has done anything more than depict what he saw. It is to be reproduced in chromo-lithography by Messrs. Day, and seems made for the purpose. The picture should be seen.

PRINCESS'S THEATRE.—Mdlle. Stella Colas is an *actress:* and that is saying something in these times. Notwithstanding the distressing accent in a place where the multitude should be taught how to speak their own language, her power of expressing emotions, and that, too, powerfully, her evident genius, and charming appearance, render her an acquisition of no small value. Such a *Juliet* has not been seen for some years. Mr. Walter Montgomery plays *Romeo* with discretion and taste; and with Mr. George Vining, the manager, for a most gallant and vivacious *Mercutio*, Mr. Marston as the friar, Mrs. Marston the nurse, and Mr. Belmore the apothecary, a most satisfactory and striking representation of the tragedy is given; one that should fill the house for many nights to come.

THE SHAKSPEARE FUND.—Mr. and Mrs. Charles Kean's readings at the St. James's Hall, proved eminently satisfactory, as we anticipated would be the case, and were listened to with the greatest delight. A statement that has been distributed shows that the fund is progressing:—

"This fund was established in October, 1861, to accomplish the following objects:—1. The purchase of the gardens of Shakspeare at New Place. 2. The purchase of the remainder of the Birth place Estate. 3. The purchase of Anne Hathaway's cottage, with an endowment for a custodian; 4. The purchase of Getley's copyhold, Stratford-on-Avon; 5. The purchase of any other properties, at or near Stratford-on-Avon, that either formerly belonged to Shakspeare, or are intimately connected with the memories of his life; 6. The calendering and preservation of those records at Stratford-on-Avon which illustrate the poet's life, or the social life and history of Stratford-on-Avon in his time; and 7. The erection and endowment of a Shakspeare Library and Museum at Stratford-on-Avon. During the short time that the fund has been in existence, great progress has been made towards securing the accomplishment of its first object—the preservation of the site and gardens of New Place."

TENDERS.

For new offices, No. 30, Mark-lane, City. Mr. Clarke, architect

Rider	£5,049 0 0
Marsland & Son	4,950 0 0

We are compelled to decline pointing out books, and giving estimates.

Statements of facts, lists of tenders, &c., must be accompanied by the name and address of the sender; not necessarily for publication

Advertisements cannot be received for the current week's issue later than **FIVE o'clock, p.m.,** *on Thursday.*

The *Daily Telegraph* of March 31st, in its description of Benson's Great Clock, says : "It is a triumph of ingenuity." Benson's new showroom contains clocks designed by the first artists of the day, and include clocks for the drawing-room, bed-room, library, hall, staircase, bracket, carriage, church, turret, railways, counting-house, with musical, astronomical, and every description of clock, from the tiniest to the highest quality of which the art is at present capable. Church and turret clocks specially estimated for. Benson's Illustrated Pamphlet on clocks and watches (free by post for two stamps), contains a short history of clock and watch making, with descriptions and prices; it acts as a guide in the purchase of a clock or watch; and enables those who live in any part of England, Wales, the Colonies, India, or other part of the world, to select a clock.—J. W. Benson received a Prize Medal and honourable mention. — 33 and 34, Ludgate-hill, London. Established 1749.—[Advt.]

OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 20, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite), is raised in blocks of portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

TURNED MARBLE and STONE
COLUMNS, TABLES, VASE STANDS, &c. of every description and any size. The Trade supplied with Sawn Marble Slabs, Mouldings, Cases, &c. at the lowest prices. Every description of Ornamental and Plain Work in Marble or Stone at

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the Sun-or atmosphere

ULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent erwise under the name of "Improved Zinc Paint," or as the butcher Two or Three qualities, no workman can produce good work with aterial. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

EAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

DOWGATE HILL, London; and 2, GOREE PIAZZA, Liverpool.

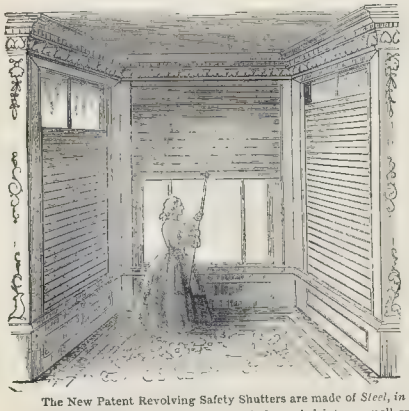
REVOLVING SHUTTERS, TWO SHILLINGS PER FOOT.

BY HER MAJESTY'S ROYAL LETTERS PATENT.

CLARK & CO. PATENTEES,

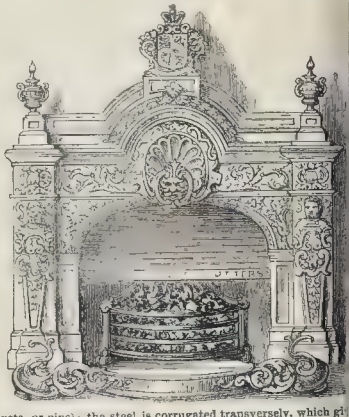
And Manufacturers to the Honourable Board of Works,

15, GATE STREET, LINCOLN'S INN FIELDS, LONDON,



AND 4, MARKET STREET, MANCHESTER.

CLARK'S Patent Self-Coiling Iron Shutters, 3/ per Foot.



CLARK'S Patent Self-Coiling Wood Shutters, 2/6 per Foot.

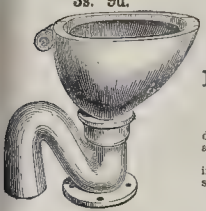
The utility of Revolving Shutters for closing Shop Fronts, Windows of Private Houses, Fireplaces, and every description of opening, is universally acknowledged; bu the cost has hitherto prevented their general adoption. This objection Messrs. CLARK & CO. have met by introducing their PATENT SELF-COILING SHUTTERS, Steel, Iron, and Wood, which, in addition to being less expensive than the ordinary shutters, have the advantage of being remarkably simple, and, consequently, not liable get out of order. The Wood Shutters are constructed of laths of wood rebated together, having numerous mortises, through which pass a series of tempered steel band causing the Shutters to be Self-Coiling, and rendering them proof against Burglars.

CLARK'S PATENT SELF-COILING STEEL SHUTTERS, 3/6 per Foot.

The New Patent Revolving Safety Shutters are made of *Steel, in one sheet* (without either chain, links, rivets, or pins); the steel is corrugated transversely, which gi the appearance of laths, and enables them to be coiled into a small space. The corrugations render the Shutter exceedingly rigid, transversely and remarkably pliable, a self-coiling longitudinally. They are light, and can be pushed up and drawn down without the aid of machinery of any description. It is absolutely impossible for them get out of order.

From the strength and hardness of the material of which they are composed, and being in *one sheet*, they cannot either be cut or broken through, as there is no open or a lever or other instrument to be inserted as in the ordinary lath shutter, rendering them doubly secure, as any attempt to break through or open them will give immediate alarm through the building. Their numerous advantages, coupled with the lowness of price, must insure their universal adoption, both in SHOP FRONTS PRIVATE HOUSES.

These Shutters are Manufactured solely by the Patentees, Messrs. CLARK & CO. and are the only Revolving Shutters made that do not require machinery or gearing apparatus, while the cost is the same as the ordinary Lifting Shutters.



BRASS SASH BARS, STALL-BOARD PLATES, AND SUN BLINDS FOR SHOP FRONTS.

PROSPECTUSES AND WORKING DRAWINGS FORWARDED FREE ON APPLICATION.

Architects should be particular in describing the description of Shutter they require used.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo-Silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard stone has been an obstruction to Art; but since the Fluo-Silicic process can be applied as readily to soft stone after it is carved, that obstruction exists no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information, apply to the Manager of the Company, Mr. DUDLEY, Architect, as above.

BARTLETT, BROTHERS, & CO.

MR. WHITTINGHAM has to announce that Lots 145 to 147, 230 to 235, 237 to 241, 243 to 252, offered by auction on the 30th ult. were sold. The remaining lots may be purchased by Private Contract on application to the Auctioneer, 14, Moorgate-street, E.C.

OLD ASYLUM, BEDFORD.—Excellent BUILDING MATERIALS.

MR. WHITTINGHAM is instructed to SELL by AUCTION, on MONDAY NEXT, 6th inst., at TWELVE for ONE o'clock, on the PREMISES, close to the Midland Railway, in the Borough of Bedford, the whole of the BUILDING MATERIALS of the Military College Asylum, consisting of large slate shelves, iron girders, 40 cwt. stock bricks, a large quantity of fire-bricks, fire-grates, slate, string courses, etc. 12, and rooms for gable, &c.; a large quantity of moulded stone, pattern, bonnet, and small plain bricks, &c.; slates for roofs, York paving, stone steps, 8 tickets, fire-wood, scrapers in stone, iron frames, &c.; sash and other window, shower and other baths, 2 gates, &c.—To be viewed on the Tuesday and Saturday before the Sale and catalogues may be obtained of the Auctioneer, 14, Moorgate-street, London, E.C.; and of the Foreman on the Estate.

ADDISCOMBE, CROYDON, SURREY.

MR. WHITTINGHAM is instructed to SELL by AUCTION, on the PREMISES close to the town of CROYDON, on FRIDAY, JULY 10, 1863, at TWELVE for ONE precisely the SIXTEENTH PORTION of the excellent BUILDING MATERIALS of the Military College Asylum, comprising a large quantity of York paving, Portland stone sills and blocks, wide oil copings, large sash and frames with shutters, &c., a quantity of excellent folding and other doors, 4 wrought iron and mahogany seat, 4 cast steel stove rails and fender, consisting of 4 pairs of ornamental standards, 4 rails, and fender, 4 pairs of firewood, &c. May be viewed Wednesday and Thursday preceding the sale. Catalogues may be obtained of the Foreman on the Estate; and of the Auctioneer, 14, Moorgate-street, London, E.C.

REDHILL, SURREY. Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, London, on FRIDAY, JULY 24th, 1863, at TWELVE for ONE o'clock, a further portion of the eligible FREEHOLD BUILDING LAND, free of tithe and land tax, and situate on the London and Brighton road. The slope between Redhill and Garlick's-road, and on the Reigate-road, close to the Redhill Station, and within the fraunchise of the Brighton, Portsmouth, and South Coast Railway. One-tenth of the purchase money and no interest, mortgage or contract at 5 per cent., to be paid on June 25, 1864, by half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice. Rates and taxes, and all charges, will be discharged before the sale, by the proprietor of the freehold land; of Mr. THOMAS BUCKLAND, Church street, Redhill; of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and on the Place of Sale.

LEYTON, ESSEX.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, London, on FRIDAY, JULY 24, 1863, at TWELVE for ONE o'clock, in FOUR LOTS, Parts of Lots of eligible FREEHOLD BUILDING LAND, free of tithe and land tax, with frontages to the Avenue-road, Grange Park, Leyton; also a few lots fronting the Southern Outfall Sewer, and Orange-roads. The property is suitable for first-class villas or good cottage residences, and is situate within ten minutes' walk of the Low Leyton Station, on the Eastern Counties Railway, and within a mile and a half of the Stratford and Tottenham Station, on the Great Eastern Railway. The sale is peremptory and will not be put off on any account. The facilities for the early erection of houses, and the advantages enjoyed by the neighbourhood in the matter of railways at Stratford, and the great and increasing demand for houses in the locality, render this property peculiarly adapted for building profit or rent.

The purchase money may be paid by a deposit of 10 per cent. and the remainder in nine years by half-yearly instalments, with interest at 5 per cent., but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions may be obtained about ten days before the sale of the Lessee, Mr. Henry Keay, Leyton; of Messrs. RUSSELL & DAVIES, Solicitors, 59, Coleman-street, London, E.C.; and of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale.

IMPORTANT SALE To Builders, Contractors, and Others.—Boston, Lincolnshire.

TO BE SOLD by AUCTION, in the month of JULY next, a valuable FREEHOLD ESTATE, situate in Witham street, in Boston aforesaid, consisting of excellent BUSINESS PREMISES, comprising a newly erected dwelling house, office, large carpenter's and wheelwright's shops, timber, flume, and other sheds, stables, a large yard, and other premises. A very extensive and lucrative business has been carried on the premises for a series of years past, and the same are held on lease for the benefit of Mr. Benjamin Bolt, Builder, deceased, and are now in the occupation of Mr. Bolt's widow. Further particulars may be had on application to Mr. JOHN ANDREW JACKSON, of Boston aforesaid, Estate Manager, and Mr. ROBERT MARSHALL, of the same place, Chemist and Druggist; or at the Offices of Mr. FREDERICK COOKE, Solicitor, Boston.

Boston, June 15 h, 1863

GEORGE MITCHELL'S MARBLE and STONE WORKS WALTON STREET, BROMPTON, S.W.

Notice of PRIVATE SALE.—Veined and Statuary MARBLE CHIMNEY-PIECES, to be sold at very reduced prices (to save the expense of removal to the Metropolis), in the following Marbles, viz.:—Statuary, Rouge Royal, Black and Gold, Black, Sienna, Bardilla, Dove, California, St. Ann's, Rouge Jaspar, Jeune Fleuro, Brocatella, Genoa Green, Irish Green, Blue Belge, Emperor's Red, Irish Fossil, Campane Melange, Vein, Sienna, and Antique Egyptian specimens of British Marbles, varying in price from 12. 10s. to 20l.; and for elegancy of design, workmanship, and quality, not to be surpassed in England. Purchasers to the extent of 50l. or upwards, signed bills of three and four months will be taken, less 2½per cent. Purchasers from the country will be supplied with packing cases and the same packed and delivered to any of the metropolitan stations for 1 per cent. on the amount purchased.

KINGSBURY, Middlesex.—Important and valuable Freehold Estate, situate within six miles of Hyde Park corner, in front of Kilburn Gate, intersected and bounded by good roads, possessing great advantages for building, and offering an exceedingly favourable opportunity for purchasers or speculators.

MESSRS. WEATHERALL & GREEN have received instructions to offer for SALE by AUCTION, at the MART, opposite the Bank of England, on TUESDAY, JULY 7, at ONE o'clock precisely, in one lot, the very valuable and important FREEHOLD ESTATE known as Blacked Hill Farm, beautifully situate at Blacked Hill, about six miles from the Welsh Harp, in the Edgware Road, and two miles from Kilburn Gate, and within easy access of both the Willesden and Sudbury Stations on the London and North-Western Railway. It comprises a comfortable homestead, with farmyard and enclosed by stabbing, cart-lodges, piggeries, barns, and labourers' cottage, together with several enclosures of fine rich dairy and meadow land, in a high state of cultivation, containing upwards of 100 acres. The property has many important and valuable frontages, more especially to the road which runs Willesden-lane, and also to the Kingsbury-lane. It is beautifully timbered, and situate upon the brow of a hill, commanding delightful views of great extent, offering an unusual opportunity for the creation of a gentleman's residence, or addition which its situation with the town, and the extraordinary demand for land in this immediate locality, ensure the certainty of its becoming in a few years, if judiciously sub-divided into lots, one of the most valuable properties in the north-west suburb of London. It has been in the occupation of Mr. William Warner for the last 34 years as yearly tenant, at a very low rental, but it may be fairly estimated to command 350l. per annum.—Particulars, with plans, are now ready, and may be obtained at the Welsh Harp, Edgware Road; at the Auction Mart; of Messrs. ROGER, BEWES, & ROGER, Solicitors, Stonehouse, Devon; of Messrs. BELL, BRODRICK, & BELL, Solicitors, New Church Chambers, E.C.; and of Messrs. WEATHERALL & GREEN, Land Agents, Surveyors, and Auctioneers, 92, Chancery-lane, London

TO BUILDERS, CONTRACTORS, AND OTHERS.—NEARLY NEW SCAFFOLDING, &c.

MESSRS. GLASIER & SON will SELL by AUCTION, on the GROUND at the end of Allen street, Kensington, on THURSDAY, July 9th, at TWELVE for ONE o'clock, in Lots, the valuable SCAFFOLDING, which have just been erected large works in that neighbourhood, the capital nearly new SCAFFOLDING, &c. comprising about 1,000 standard and other poles, 1,000 small battens, 6 double and 30 putlogs, cross, 4 rails, water and wash tubs, wheeling planks, lavvy barrows, pails and jokes, several ladders, mortar-boards, gauging-boards, screws, cords, handle shaves, hand-carpenters' benches, and other effects.—May be viewed the day prior and morning of sale, and catalogues had on the ground; at the Devonshire Arms, Wright's-lane, Kensington; and of CHARLES GLASIER, Chandler's Cottages, and of the Auctioneers, 41, Charing-cross, S.W.

BUILDING MATERIALS.

MR. C. F. SMYRK will SELL by AUCTION, on the PREMISES, facing Palace-court gate, Rye-lane, Peckham, on MONDAY, JULY 6, at TWELVE for ONE, 150 lots of sound useful MATERIALS, including timber, flooring and floor boards, stone paving, fittings and fixtures of every description. Catalogues on the Premises, two days prior; and of Mr. C. F. SMYRK, Auctioneer Surveyor, and Valuer, 18, Newington-place, Kennington-road.

TO BUILDERS.—WANTED, BUILDERS, to build on land close to a railway station, and within three miles of London. Liberal advances made.—Apply by letter to G. B. 6, Windsor-terrace, City-road.

NOTICE.—MESSRS. FREEN & CO. of No. 3, Canal-road, Kingsland road, and Frendsbury, Kent, Roman and Portland Cement and Plaster of Paris Manufacturers and Lime Burners, with a view to meet the requirements of their numerous friends at the West-end of town, intend OPENING a WHARF, on the 1st of August next, at 17, MILLBANK STREET, Westminster, where every description of goods connected with their trade may be obtained. Orders addressed as above will receive prompt attention.

COMPETITIONS.

TO ARCHITECTS and OTHERS. The CHELTENHAM MONTPELLIER GARDENS COMPANY (Limited) have been formed with the object of laying out the MONTPELLIER GARDENS as a place of Public ENTERTAINMENT and Resort, and of ERECTING thereon a BUILDING suitable to these purposes. The Building is required to contain a Hall adapted to Concerts and other Assemblies, capable of receiving from 1,500 to 2,000 persons, and communicating with convenient ante-rooms. It must also contain a Museum, Library, and Lecture-room, and Apartments for a resident Secretary. It is further desired to have Racket-courts adjoining the Building, and an Orchestra in the Gardens. The Grounds, which are nearly nine acres in extent, are rectangular, and bounded on three sides by public roads. They are at present levelled and turfed, but require to be laid out as Pleasure-grounds, due regard being had to the Buildings before mentioned, and to the preservation of spaces for Promenades and Archery, Bowling and Croquet Lawns. The entire outlay should not exceed 6,000l. but a plan which, with a reserve of one-third of this sum, might be carried out progressively hereafter, without meanwhile appearing incomplete, would be preferred. The Directors being now desirous to obtain Plans for carrying out the works, hereby offer 50l. as a first prize, and 20l. as a second prize, for the Plans which, in their opinion, shall be first and second in order of merit. Each set of Plans to be a companied by an Estimate, and those for which the prizes are awarded to become the property of the Company. A Working Survey of the Ground has been prepared, and may be inspected at the Offices of Messrs. WINTER-BOTHAM, BELL, & CO. Cheltenham, the Company's Solicitors, to whom any further inquiries respecting this advertisement may be addressed. The Plans must be distinguished only by a motto, and must be forwarded to the Secretary, in a closed envelope, directed to Sir ALEXANDER RAMSAY, Bart. Chairman of the Company, on or before the 1st day of SEPTEMBER next.—By order of the Board.

Cheltenham, 9th June, 1863. JOSIAH JESSOP, Secretary.

TO ARCHITECTS.—The GUARDIANS of the WEST LONDON UNION, in the City of London, do hereby give notice that they are desirous of receiving, and hereby invite Architects to send in, DESIGNS and PLANS for the ERECTION of a NEW UNION WORKHOUSE up in Pond at Holloway, in the Parish of St. Mary, Islington. Accommodation will be required for 500 persons, male and female. The Guardians will be willing to pay Premiums for three Sets of Plans which shall, in their opinion, best meet their requirements, viz.—for the first, 100l.; for the second, 60l.; and for the third, 40l. The three Sets of Premiated Plans are to become the property of the Guardians, who will not bind themselves to adopt either design, but will be at liberty to modify either premiated design in any way they may think proper; nor will they be bound to employ the Author of either to carry out the work; but, in the event of his being selected for that purpose, the premium to merge in the Architect's Commission. Each Set of Plans must be distinguished by a motto, and accompanied with a sealed envelope, containing the name and address of the Competitor, and having a similar motto to that on the Plan or Design, which envelope will not be opened until after the plans are awarded upon. The Plans, and everything intended to be submitted therewith, must be enclosed in a sealed cover, endorsed "Plan for West London Union Workhouse," and addressed to me at my office, 5, St. Andrew's-court, Holborn, E.C. and delivered on or before the 21st day of AUGUST next. The Guardians will pay to the Architect selected to carry out the Work, a commission of 5 per cent. on the outlay, to include all Plans, Drawings, and specifications, and all attendances necessary to complete the same, and all charges of extras for any description will be allowed. All the Plans and Designs, except the premiated ones, will be returned, carriage free, on application being made to me, accompanied with the corresponding sealed letter unopened; and no further liability by the Guardians, or claims to any remuneration will be allowed in respect of the Plans received beyond the amount of the Premiums herein set forth. The Guardians give notice that economy of structure will be an important consideration in the selection of Designs; and should the lowest Tender to be hereafter received for the erection of the Workhouse buildings and premises exceed in amount by 10 per cent. the Architect's estimate, they will not be bound to use the Designs and Plan, nor to pay any premium for the same.—Plans of the ground, and full particulars and information that may be required, can be had on application at my Office.—By order of the Board,

JOHN PONTIFEX, Clerk to the Guardians.
5, St. Andrew's-court, Holborn, July, 1863.

COUNTY of SOMERSET.—To ARCHITECTS. The Committee appointed by the Court of Quarter Sessions for the County of Somerset, at the last Spring Session, are prepared to receive PLANS and ESTIMATES for the ERECTION of BUILDINGS for MILITIA STORES in the neighbourhood of Bath.—Particulars may be obtained at the Orderly Room of the second Somerset Militia, No. 4, Hempstead street, Bath.

EDWIN LOVELL, Clerk of the Peace.
Wells, Somerset, July 1, 1863.

CONTRACTS.

ATHERSTONE GRAMMAR-SCHOOL.—To BUILDERS.—The TIME for Receiving TENDERS for Works to the above school is EXTENDED from the 10th to the 21st JULY, 1863. ROBERT JENNINGS, Architect.
Atherstone, 8th July, 1863.

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.—TENDERS are required for the ERECTION of an INFANT SCHOOL and SCHOOL-MISTRESS'S QUARTERS, at Romulus Barracks, in the county of Middlesex.

Persons desiring to Tender for this work must leave their names at this Office, between the 10th and 15th of JULY, 1863 (during the hours 7 ELEVEN a.m. and THREE p.m.) both days inclusive, and pay the sum of half a guinea for the bills of quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, London District, 11, James-street, Buckingham Gate, S.W. June 23, 1863.

BARTON-UNDER-NEEDWOOD, near BURTON-ON-TRENT.—To BUILDERS. Persons desirous of offering TENDERS for the proposed ENLARGEMENT, RE-SEATING, and other WORKS at the above Church, may see the Plans and Specifications, and obtain further information at our Office, 45, Friar gate, Derby, until the 18th of JULY inclusive, after which no application will be received. The lowest Tender will not necessarily be accepted. STEVENS & ROBINSON, Architects.
June 30, 1863

EXTENSION of STAFFORD COUNTY GAOL.—To BUILDERS and CONTRACTORS.—Parties disposed to TENDER for extensive ADDITIONS to the above building, may inspect the plans, specification, and conditions of contract at my Office, in Stafford, on and after THURSDAY, the 16th day of JULY, until SATURDAY, the 1st day of AUGUST. Bills of quantities will be furnished at a charge of two guineas for each copy, such two guineas being returned to those parties who submit tenders for the works. Tenders, sealed up and properly endorsed, to be delivered at my Office by TEN o'clock a.m. on SATURDAY, the 1st day of AUGUST next. Security will be required for the due performance of the contract, but neither the lowest nor any Tender will be accepted unless satisfactory in all respects.

ROBERT GRIFFITHS, Architect and County Surveyor.
Eastgate street, Stafford, June 24, 1863.

TO BUILDERS. — CHRIST CHURCH PARSONAGE, Blackburn.—Persons desirous of TENDERING for the several TRADES required to erect and ERECT the above, may inspect the drawings and specifications at the Architect's offices, 18, Cooper street, Manchester, from the 13th to the 17th inst. at Christ Church Schools, Blackburn, from the 17th to the 20th instant, both dates inclusive. The Tenders to be addressed to the Rev. R. MOSS, 1, Trinity Church, not later than 6 p.m. on the last date. The lowest Tender not necessarily accepted. N.B. The quantities of each Trade have been taken out, and can be had on application to the Architect.

JAMES STEVENS, Architect.
Manchester, July 11th, 1863.

TO MASONS and PAVIORS.—The Commissioners of Sewers of the City of London will meet in the Guildhall of the said City on TUESDAY, the 21st JULY, 1863, at HALF PAST TWELVE o'clock precisely, to receive TENDERS for RELAYING the CARRIAGE WAY PAVEMENT of LEADENHALL STREET and MANSION HOUSE STREET and RELAYING the FOOTWAYS of FLEET STREET, agreeably to specification to be seen at this Office. Persons tendering are required to give the names and addresses of at least two responsible householders as their sureties to enter into bond with the Contractor for the due performance of the Contract. The Commissioners do not pledge themselves to accept the lowest Tender, or any, unless deemed satisfactory; and no Tender will be received after TWELVE o'clock on the day of treaty.

JOSEPH DAW, Principal Clerk.
Sewers' Office, Guildhall, 7th July, 1863.

LLANELLY MAIN DRAINAGE WORKS.—TOWN DIVISION.—The Llanelly Local Board of Health are prepared to receive TENDERS for the EXCAVATION and CONSTRUCTION of about 4,000 lineal yards of Brick Main SEWERS, and 500 yards of BRANCHES, for the drainage of part of the town; and also for the Construction of the necessary Street Gullies, Manholes, and other WORKS connected therewith, in accordance with Plans and Specifications, which may be seen at the office of Mr. EDWARD BAGOT, C.E. Surveyor to the Board. Sealed Tenders, marked "Drainage Works Contract, No. 1," are requested to be sent in before NINE o'clock on SATURDAY morning, the 25th day of JULY instant, addressed to the Clerk of the Board. It may be observed that the Board do not pledge themselves to accept the lowest or any of the Tenders. By order,

Llanelly, July 4, 1863. FRED L. BROWN, Clerk.

METROPOLITAN BOARD of WORKS. To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Board of Works hereby give notice, that they will meet at the Office of the Board, Spring gardens, on FRIDAY 24th day of JULY next, at TWELVE o'clock at noon precisely, and will then be prepared to open TENDERS by parties who may be willing to CONTRACT for the CONSTRUCTION of a GASMETER TESTING HOUSE, STORE ROOM, and LABOURERS' COTTAGE, at Scott Abbott street, Westminster. Parties intending to tender are only to obtain plans, sections, specification, form of Tender, and other particulars, on application to Mr. FURSEY, at the office, Spring gardens, between the hours of NINE a.m. and FOUR p.m. on SATURDAYS between the hours of NINE a.m. and TWO p.m. until THURSDAY, the 23rd of JULY next. The Tenders are to be addressed to the Clerk of the Board, and must be delivered at the office before FOUR o'clock on THURSDAY, the 23rd of JULY next, at the latest, with the envelope indorsed on the face thereof with the parties' names. It must be understood at the Board at TWELVE o'clock on the day appointed for opening Tenders. The Board do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two approved sureties for the due and satisfactory performance of the works.

JOHN POLLARD, Clerk of the Board.
Spring gardens, S.W. July 8, 1863.

[For remainder of Contracts see next Page.

CONTRACTS.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of a CHAPEL, SCHOOL-ROOMS, &c. at Redruth, in the county of Cornwall may inspect plans and specifications at the Offices of THOMAS SIMPSON, Architect, Nottingham, on and after FRIDAY, the 10th inst. FRIDAY, the 24th day of JUNE; and at the Vestry of the United Methodist Free Church, Redruth, on MONDAY, the 29th day of JUNE, until SATURDAY, the 11th day of JULY, sealed Tenders to be delivered at the Offices of Mr THOMAS ROSKROW, Bookseller, Redruth, not later than the 15th day of JULY, endorsed, "Tender for Chapel." The lowest or any Tender not necessarily accepted.

ABERDEEN WATERWORKS EXTENSION GRAVITATION SUPPLY from CAIRNTON — The Commissioners under "The Aberdeen Police and Waterworks Act, 1862," are prepared to receive TENDERS for CONSTRUCTING and MAINTAINING the requisite WORKS, consisting of the aqueduct (about twenty miles long) for conveying water from the River Dee at Cairnton to Aberdeen, with the reservoirs, filters tanks, conduits, hydraulic engine, cast-iron pipes, wrought-iron tubes, and other appurtenances. The plans and specification of the works, with general conditions of contract, may be seen at the Commissioners' Office, 50, St Nicholas-street, Aberdeen, and sealed Tenders are required to be delivered on or before MONDAY 17th AUGUST, 1863, at TEN o'clock in the forenoon, addressed to "The Commissioners of Police, Aberdeen," marked "Tender for Waterworks." Persons desirous of contracting may submit offers for constructing and maintaining the whole of the works, or any portion or portions, section or sections thereof, as are particularly defined and described on the plans and in the specifications and general conditions. The cost and wrought-iron work forming one of the sections for which a distinct Tender may be made. The Commissioners do not pledge themselves to accept the lowest Tender or Tenders, nor any Tender, unless the same shall be satisfactory in all respects, and the securities approved.
GEORGE MILNE, Clerk of Police.
Aberdeen, 8th July, 1863.

MOUNT PLEASANT WESLEYAN CHAPEL, Thornehills, near Sheffield.—Builders willing to CONTRACT for the above BUILDING may see the plans and specifications on and after JULY 11th, 1863, at Messrs NEWTON, CHAMBERS, & CO.'S Iron-office, Mill and stat on, Shaffield. Tenders, sealed and indorsed to be delivered to the Rev S. H. BURTON, Thornehills, on JULY 25th instant. The lowest or any of the Tenders not necessarily accepted.
JAMES WILSON, F.S.A. Architect.
No 1, Belmont, Bath

TO BUILDERS. — Parties disposed to TENDER for the ERECTION of a DINING and RECREATION HALL, and other Works, at the County Asylum, Stafford, may inspect the Plans, specifications, and conditions of Contract, at my Offices in Stafford on and after SATURDAY, the 18th day of JULY, until SATURDAY, the 25th. Bills of quantities will be prepared and furnished at a charge of 1l. 1s. per copy, which will be returned to all parties who submit Tenders for the works. Sealed Tenders, properly endorsed, must be delivered at my Office, by TEN o'clock, a.m. on MONDAY, the 27th of JULY next, but neither the lowest nor any Tender will be necessarily accepted. Security will be required for the due performance of the works.
ROBT. GRIFFITHS, Architect and County Surveyor.
Eastgate-street, Stafford, 30th June, 1863.

TO BUILDERS and ROAD and DRAINAGE CONTRACTORS — ARTIZANS' MODEL DWELLINGS, West Hill Park, Halifax.—TENDERS are required for the ERECTION of the 15 new HOUSES, and the Fences and Outbuildings connected therewith. Drawings and specification may be seen, and could be had of Contract, may be seen upon application to Mr J. D Taylor, Central Buildings, Halifax, on and after MONDAY, 29th inst. and Tenders must be delivered before SIX o'clock p.m. on MONDAY, 3rd day of AUGUST. Tenders may be for the whole of the Works or in separate trades. Bills of quantities and forms of Tender will be supplied upon payment of 5 shillings. Applicants for the same to be made to Mr TAYLOR on and after 6th inst. No Tender will be received except upon the forms furnished with the quantities. Tenders are required also, for the Formation of Roads and Drainage in connexion with the above and future Dwellings. Drawings and quantities as before
PAULL & AYLIFFE, Architects,
India Buildings, Cross street, Manchester.
Dated 2nd July, 1863

TO BUILDERS, PAVIORS, and OTHERS. The Drapers' Company are desirous to receive PROPOSALS for PAVING, and for SPRINKLING, PAVING, or otherwise treating the PLAYGROUND of a BOYS' SCHOOL, in the Leighton-road of London, having an area of about 2,000 yards. Such proposals with estimates, to be delivered at Drapers' Hall, Throgmorton-street, E.C. on the 15th day of JULY inst. Further particulars and plans of the ground, may be seen at Drapers' Hall, or at the Office of HERBERT WILLIAMS, Esq. Architect, 32, Old Broad-street, E.C.

WANTED, DOMESTIC FILTERS.
Persons desirous of supplying the above are invited to send TENDERS to BALDWIN CRAHAM, 1 Kew-terrace, Ely, Cambridgeshire, on or before the 25th day of JULY, stating price, description, area and thickness of filtering medium, mode of cleaning, quantity of water capable of being passed in 24 hours, together with reference to persons who have the same in use.
Ely, 9th July, 1863.

TO BUILDERS.—Persons willing to CONTRACT with the Justices of the County of Kent, for the ERECTION of a POLICE STATION, at Charlton, in Greenwich parish and special district, at the Office of the County Surveyor, Maidstone, any day except Saturday, between the hours of TEN and FIVE. The work is to be divided for agreement into Form or Tender, to be obtained at the County Surveyor's Office, where Model Ground-plan, endorsed "Tender for Charlton Police Station," are to be delivered by NINE o'clock, a.m. on MONDAY, the 27th instant, at which persons tendering are to be in attendance at the County Surveyor's Office, Maidstone, at HALF-PAST TWELVE o'clock on that day. Neither the lowest nor any other Tender will be accepted unless approved of in all particulars, and security will be required for the proper performance of the Contract.
H. A. WILDES, Clerk of the Peace.
Maidstone, July 10, 1863.

TO SEWER CONTRACTORS and BUILDERS. The Vestry of the Parish of Chelsea will meet at the Board Room, at the Vestry Hall, Kings-road, on TUESDAY, the 21st day of JULY instant, at THREE o'clock in the afternoon precisely, for opening TENDERS from persons willing to CONTRACT for the CONSTRUCTION, in Arthur-street, of about 250 Feet run of BRICK SEWER, 3 feet 9 inches high, 2 feet 6 inches wide, and one Brick thick; and other Works, according to a specification and drawing, which may be seen at the Office daily between the hours of TEN and FOUR. Parties Tendering must appear personally or the day the Tenders are opened. The expense of the Contract to be paid by the Contractor, upon the execution of the same. Sealed Tenders, signed by the proposed Contractor, with the names and description of two sufficient sureties for the performance of his Contract, are to be left at the said Office before TWELVE o'clock on the said 21st inst. The Vestry do not bind themselves to accept any Tender.
By order,
CHARLES LARKE, Vestry Clerk.
Vestry Hall, King's-road, Chelsea, July, 1863.

COLSTON'S HALL, BRISTOL. — To BUILDERS. The Directors of the Colston's Hall Company, Limited, are desirous of receiving TENDERS for the WORKS required in the ERECTION of their proposed BUILDING, which embraces an area of about 18,000 superficial feet, with terrace ranges of 100 feet and 150 feet respectively. The materials will be taken out by the Architects, at the expense of the Company, and will be supplied, free of charge, to such of the competing tradesmen as are desirous of availing themselves of them. Parties willing to contract for the whole or any branch of the works are requested to forward their names to the Architects, on or before the 14th instant, and to state what branches of the work they propose tendering for, and whether any, or which, bills of quantities will be required by them. The Directors will not pledge themselves to accept the lowest or any other Tender.
FOSTERS & WOOD, Architects.
6, Park-street, Bristol, July 1, 1863.

TO CLOCK-MAKERS. — Birkenhead Cemetery.—The Birkenhead Improvement Commissioners are prepared to receive TENDERS from parties willing to CONTRACT for the FORMATION and COMPLETION of a proposed ROAD and other works now or hereafter therewith, near the Roxborough Turnpike Gate, and within their district, according to the plan and specification which may be seen at the house of Mr WM SMITH Surveyor to the Board, West street, Harrow. The Board do not bind themselves to accept the lowest or any Tender. Tenders to be sent in to me on or before SATURDAY, the 25th instant, endorsed, "Tender for new Road."—By order of the Board,
Harrow, July 7, 1863. WM WINKLEY, Clerk.

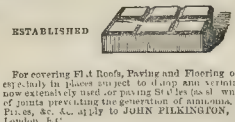
75, Upper Thames street, London, E.C.

NOTICE.—For Church Work, Libraries, Halls School, Offices, Railway and all Public Buildings.—IMPORTANT to BUILDERS.—MEAD'S PATENT ROYAL OAK STAIN, to be had of J. J. HOGG, 3, Brunswick place, City-road, and at the Works, Acton, Essex. 8s. per gallon. Post orders will have best attention and object. Those who have not yet used the above should do so, the improvement is great and far surpasses anything else ever seen, the effect being very superior, giving a rich, mellow, finish to the work, entirely surpassing paint, it therefore merits special attention from the Trade. See also MEAD'S PATENT SATIN WOOD, MAHOGANY, WAINSCOT, WALNUT, which are highly valued by Furniture and Fixture Workers.



DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving public notice to follow a letter from SIR RAYMOND JARVIS Bart VENTNOR, ISLE of WIGHT—Sept 3rd Instant.—"Mary Jane, 1862.—In reply to your letter of the 1st instant, respecting the Gutta Percha Tubing for Pump Service, I am satisfied with its action, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least appearance of the pipe giving down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here"
N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

POLONCEAU and LIMMER ASPHALTE.
ESTABLISHED 1838

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for paving Stables (as at Windsor), the absence of joints preventing the generation of ammonia. For Estimates and Prices, &c. apply to JOHN DARLINGTON, 15, Park street-hill, London, E.C.
Country Builders supplied with Asphalte in Bulk for covering Floorings, Barn Floors, &c. with instructions to lay it down.

COOMBS & McCALL, Dover Iron Works, Staple-street, Long-lane, Borough, S.E. (late H. G. COOMBS) 17, Union street, and 103, Great Guildford street, Borough, S.E. Inventor of the Rotary Shop Front, Patentee of the Tubular Railings new Compensating Girder Truss, &c. &c.
GENERAL IRON FOUNDERS,
MERCHANTS, and PATTERN MAKERS.

COLUMNS, GIRDERS, ROOFS, | TANKS, DOORS, RAILINGS, | STAIRCASES, MACHINE-CASTINGS,
And every description of Ironwork, wrought or cast, for Builders or other purposes, estimated for and executed. Designs furnished.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.
ESTABLISHED 1744.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently can not give so much satisfaction to the consumer.
They can be obtained of all Ironmakers, Ironmongers, Merchants, Packers, and Wholesale Houses, in Town and Country.

PATENT ASPHALTE CALDRON, for laying Asphalte floors. They are highly recommended by the Royal Agricultural Society. The cheapest and best kind of floor. Impervious to wet, and vermin will not touch it.—Full particulars sent free by
WOODS & COCKSEDGE,
IRONFOUNDERS, STOWMARKET.

IRON CASTINGS. — Wrought and Cast Iron Girders, Fittings, and Tanks, Iron Roofing, and every description of Smith and Founder's Work. Estimates given.
WILLIAM HOOD,
RAILWAY FOUNDRY, READING.

TEA LEAD for INDIA, CHINA, and JAPAN.—For Lining Tea Chests.—WINKHURST'S PATENT METAL FOIL and SHEET METAL COMPANY (Limited), having a considerable portion of the shipments of various kinds of Tea Lead to India China, and Japan, have ascertained the precise description of Lead best suited for these markets, and having recently purchased their Steam Power and Machinery, now call the attention of Merchants, Shippers, Tea-Growers, and others, to this Article as manufactured by them. The Tea Lead now manufactured by that Company is finished by the addition of a New Process, which imparts to it a great stiffness and much increased tenacity, and such a permanent brilliancy of finish as it has hitherto been found impossible to attain by any other method of manufacture. Prices and full particulars may be obtained on application at the Company's Offices, 20, Cannon-street, London, E.C.

PATENT METAL FOILS and CAPSULES. WINKHURST'S PATENT METAL FOIL and SHEET METAL COMPANY (Limited), are now manufacturing Foils and Capsules from Metal coated with Tin by Fuson, Under "Kinder's Patent." Processes, which has been recently secured by them These articles will be found to be in quality quite equal to, and much cheaper than, the same class of articles hitherto produced under any other process. Prices and full particulars may be obtained on application at the Company's Offices, 20, Cannon-street, London, E.C.

ROOFING for BUILDINGS. — Light Durable, and Economical Roofing Felt thereby superseded. WINKHURST'S PATENT METAL FOIL and SHEET METAL COMPANY (Limited) are now manufacturing, by their recently Patented Process, a new description of Sheet Metal, which is quite as pliable and as easily worked as Felt, and will last very much longer. The Sheet Metal not being so liable to deterioration by atmospheric influences, requires little or no supervision. Another very important recommendation in favour of the use of this article is that, after having served its purpose, the Sheet-brief of its original cost may be obtained by its sale as old metal. Prices and full particulars may be obtained on application at the Company's Offices, 20, Cannon-street, London, E.C.

TO BE SOLD, together or separately, TWO powerful STEAM DREDGING MACHINES, in excellent working condition: also a few HOPPER BARGES.—For particulars address letters to view, apply to Mr. BOWDLER, Engineer, Russell place, Shooter's-hill road, Blackheath, S.E.

WANTED, a Second-hand One or Two Horse Power STEAM ENGINE, with Tubular Boiler complete, in good working order, with a Band Wheel, portable or fix. Address, stating lowest price, to Mr. G. SIEP, Builder, 46, Holywell street, Strand, W.C.

STEAM ENGINE.—For SALE (cheap), a excellent ENGINE, in good working order 8 horse power.—To be seen on the premises, No. 2, Cloth street, Long-lane, Smithfield.

CHAPLIN'S PATENT PORTABLE STEAM-ENGINES AND BOILERS.

PRIZE MEDAL.—INTERNATIONAL EXHIBITION, 1862.

Stationary Engine. From 1 to 30 horse power. | Portable Hoist. 1 to 30 horse power. | Steam Crane.* 30 cwt. to 10 tons. | Engine & Crane. 2 to 25 horse power. | Contractor's Locomo. 6 to 27 horse power. | Traction Engine. 6 to 27 horse power. | Ships' Engine. Winding and Cooking.

* These Cranes were selected by Her Majesty's Commissioners to receive and deposit the heavy machinery in the International Exhibition.

Full particulars and Prices for Delivery in Glasgow or London, on application to

ALEXANDER CHAPLIN & CO. PATENTEES & SOLE MANUFACTURERS,

Orders requiring Despatch and Punctuality can be executed in a few days.

CUNDY'S

PATENT BRICK OVEN WINDING CHECK SEMI-CLOSE KITCHEN RANGE.

This Range will be found very superior to the close Range now in use, inasmuch as it combines the cleanliness of a close kitchener with the perfect ventilation of an open range.

The fall-down bar will be found useful for broiling purposes when the fire is low.

The Ventilator in the Oven Chimney, and also the Register, can be kept open without diminishing the efficiency of the range, thereby entirely removing the great objection and discomfort of all other close ranges, namely, the sulphurous and excessive heat in the kitchen, and the smell of cooking all over the house.

The great advantage of a brick oven is, that it absorbs the steam given out by bread or meat in the process of baking; consequently the latter is totally free from the disagreeable flavour too evident in meat baked in an iron oven.

As the fire of this range can be diminished or enlarged at pleasure, it can (when not in use for roasting) be wound up within 6 inches of the oven, and still be used for baking, also for boiling upon the hob over the oven, thereby effecting a considerable saving of coals.

THIS RANGE,—ALSO CUNDY'S PATENT BRICK OVEN DOUBLE FALL-DOWN BAR KITCHEN RANGE, and CUNDY'S PATENT COTTAGER'S KITCHENER,—can be seen in operation at the Show Rooms of THE MANUFACTURER,

WILLIAM ADDIS,

WHOLESALE AND RETAIL IRONMONGER, AND STOVE, GRATE, AND RANGE MANUFACTURER,

6, 7, and 15, LEICESTER STREET, LEICESTER SQUARE,

Where Mr. CUNDY can be gratuitously consulted, personally, or by letter, relative to the cure of Smoky Chimneys.

MANTEL PIECES, ENGLISH AND FOREIGN,

IN EVERY VARIETY OF DESIGN AND COST,

Have been added to their LARGE and EXCELLENT ASSORTMENT of FINE FINISHED STOVES FENDERS, &c. in the NEW SHOW ROOMS of the

LONDON, W.

FIRE-PROOF CONSTRUCTION.—

FOX & BARRETT'S PATENT.

This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

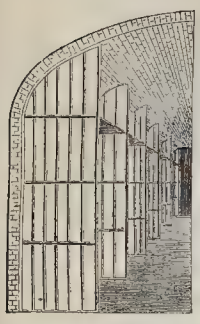
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,

MR. BARRETT,

19, YORK BUILDINGS, ADELPHI

CANNON IRON FOUNDRY 156, Goswell-street, St. Luke's.—JONES & BLAXTON, having made great additions to their STOCK OF PATTERNS, beg to inform the Trade that they can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Coping, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Panelling, Lamp and other Brackets, Cantilevers Newel Bars, Water-closet Work, Area Gratings, Fly and other Wheels Wheel Plates, &c.



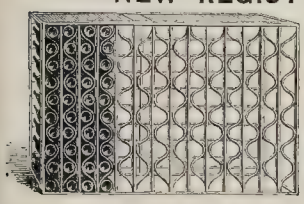
BAKERS' OVEN WORK, Forge Backs and Troughs, Rain-water Pipes and Gutters, Sash-Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT & CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show, every article marked in plain figures. Patentees, and Manufacturers of the Mercurial Gas Regulator. Complete Pattern-book and Price-lists, 12s.—Nos. 55 and 56 High Holborn.

WROUGHT IRON WINE BINS.



FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING THIRTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom. Also their

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with SEPARATE REST FOR EACH BOTTLE,

Peculiarly adapted for Private Cellars.

No laths are required, and all trouble of Binning is avoided.

FARROW & JACKSON,

18, 17, and 16, GREAT TOWER STREET; and 1, HARP LANE.

FACTORY, 57 and 58, MANSELL STREET.

SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.

THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

BOND & SCAMMELL (late Thomas Pugh & Co.)

WHOLESALE IRONMONGERS,

13, KING STREET, SNOW HILL, LONDON.

NUT

PLATE.

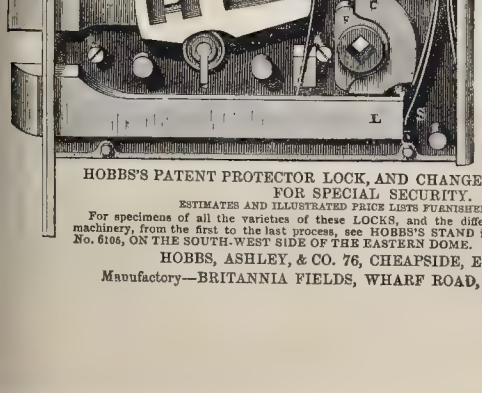
We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in public and private buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both rim and mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich designs in glass, china, brass, bronzed, gilt, carved woods, inlaid, &c. &c. or in any design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of locks, latches, brass foundry, and ironmongery, required for buildings, of the best quality manufactured, at the lowest wholesale prices.

*** Illustrations and particulars sent upon application.



INTERNATIONAL EXHIBITION, 1862.—CLASS 31, LOCKS, &c. No. 6105.

HOBBS'S CELEBRATED MACHINE-MADE LEVER LOCKS,

Suited for all purposes, at Prices that silence competition.

SUITES OF LOCKS FOR MANSIONS, WAREHOUSES, AND OTHER LARGE STRUCTURES, WITH OR WITHOUT MASTER KEYS.

PUBLIC BUILDINGS OF EVERY KIND FITTED.

The parts in the Plate marked F and C show the form of Hobbs's Patent Frictionless Follower and Crank, by which a rolling instead of a rubbing motion is produced, thereby preventing friction.

S, s, shows the double spring, by which means the Latch is allowed to work independent of the Crank in shutting the door, thereby avoiding the necessity of slamming, at the same time sufficient strength is given by the Follower Spring to throw the heaviest knobs or handles.

HOBBS' PATENT FRICTIONLESS FOLLOWER, & DOUBLE SPRING FOUR-LEVER MORTISE LOCK, Price 8s.

FIREPROOF SAFES, IRON DOORS, CASH BOXES, &c.

HOBBS'S PATENT PROTECTOR LOCK, AND CHANGEABLE KEY BANK LOCK FOR SPECIAL SECURITY.

ESTIMATES AND ILLUSTRATED PRICE LISTS FURNISHED ON APPLICATION.

For specimens of all the varieties of these LOCKS, and the different stages of manufacture by machinery, from the first to the last process, see HOBBS'S STAND in the EXHIBITION, CLASS 13, No. 6106, ON THE SOUTH-WEST SIDE OF THE EASTERN DOME.

BROWN & GREEN'S
PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.
These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and
CURE OF SMOKY CHIMNEYS,
these Ranges are unequalled. They are of all sizes and prices; and the large ones, fitted with Bath and Steam Apparatus, &c. form the most complete appointment for large establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,
81, BISHOPSGATE STREET WITHIN.
"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept 6, 1862.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.
The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.
It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.
Extracted from the "London Daily Telegraph," May 19th, 1862.
"INTERNATIONAL EXHIBITION, Class 31.
"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER one above the other instead of *side* by *side*; and the ROASTER is constantly replenished with fresh air."

IMOPRTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

BATH STONE OF THE BEST QUALITY.

PICTOR & SON, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

THE ENGINEER'S, ARCHITECT'S, and CONTRACTOR'S POCKET-BOOK (LOCKWOOD & CO.'S, formerly WEALE'S) for the Year 1863. With Woodcuts and Eight Steel Plates.

"The present publishers deserve great credit for the improvements which have been introduced into 'The Engineer's Pocket-Book' since it came into their hands. The present edition contains several additions and improvements, and a few well-selected scientific and practical papers, and some brief memoirs of the scientific and other men of note recently deceased. The tables for the reciprocal conversion of British measures of length, superficies, capacity, &c. into metric measures, and similar tables for the translation of measures of weight, which have been much wanted, will be found a valuable addition amongst many others introduced in 'The Engineer's Pocket-Book' for this year."—*Artizan*

"Another edition of this old acquaintance has just been issued, and fully merits the estimation in which it has been held for many years. There is much new matter introduced, and the work has been carefully corrected up to the day of publication. It is one of the most valuable books of its class. We strongly recommend it." *Gas Engineer and Architect's Journal.*

"Contains an immense variety of useful matter."—*Builder*

London: LOCKWOOD & CO 7, Stationers' Hall-court, E.C.

THE PRINCESS OF WALES.

THE ART-JOURNAL for JULY (price 2s. 6d.) contains a Steel Engraving of H.R.H. The PRINCESS of WALES, by W Roffe, from the bust by Mrs Thornycroft, in the POSSESSION of the QUEEN; "John Knox preaching before the Lords of the Congregation," by W. Greatbach, after Sir David Wilkie; "Line-fishing off Hastings," by W. Miller, after J. M. W. Turner. The literary contributions include—"The Porcelain Works at Lowestoft," with examples of Lowestoft China, by Llewellyn Jewitt, F.S.A. illustrated; "The Palace at Westminster;" "William Henry Knight," with examples of his works, by Jennie Ingleman, illustrated; "The Uniformity of the Memorial of 1851 in the Horticultural Gardens," illustrated; "Sculptures in Ivory;" "History of Caricature and of Grotesque in Art," by Thomas Wright, F.S.A. illustrated; "Exhibition of Old Masters at the British Institution;" "Guildhall in Court Costume;" "Exhibition at Painters' Hall;" "On Constructive Materials in the Exhibition," by Professor Attfield, &c. &c. Also engravings from Cabinets, Chimney pieces, Wall Decorations, Floorcloth, Iron Work, Picture-Frames, Brussels and Furniture, Chandelier, Glass, Forcelain, Jewellery, Silver Plate, &c. &c. which form the sixteenth portion of the Illustrated Catalogue of the International Exhibition.

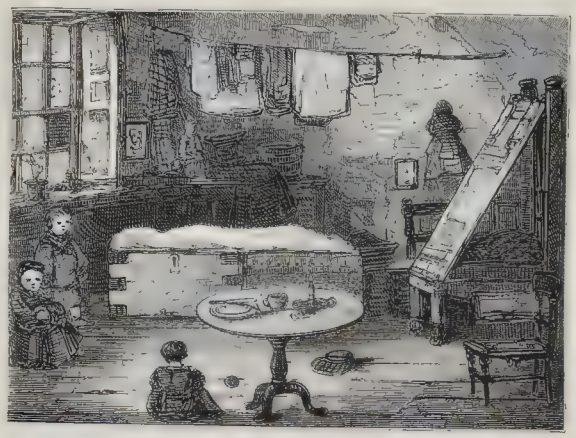
The Builder.

VOL. XXI.—No. 1066.

The Dead and the Living in Bloomsbury.



R. HADDEN PARKES and the Rector of Bloomsbury have been striving, by the offer of prizes for keeping clean and tidy rooms, to induce good habits and some attention to sanitary provisions amongst the inhabitants of Little Coram-street and the courts adjacent. The result of the experiment has more than answered their expectations. On Wednesday last the prizes were distributed in Russell-square, when Mrs. Duncan received 2*l.*, Mrs. Bailey 1*l.*, Mrs. Kean 1*l.*, and twenty-eight other persons smaller sums each, although only four prizes had been offered originally. These were given in connexion with the Flower Show for the Working Classes established in Bloomsbury, the good results of which we have before now commented on. The show was an improvement on any of its predecessors, and included, beyond the ordinary flowers of the month, some "exhibits" with a touch of poetry in them: for example, St. John's Bread or Locust-tree, from a seed; a small cherry-tree from a stone; and "Window Balm from the workhouse." Touching the "tidy-room" premiums, it is not very satisfactory to think that people must be bribed to keep their home decent; but we must take things as we find them, and act accordingly. The prizes are addressed to the very poor, and the weekly inspection consequent on competing affords an opportunity to Mr. Parkes (and is not neglected) to convey some little information on social and sanitary matters.

Let us see what evidence we can give of the need of sanitary knowledge in this neighbourhood, not merely on the part of the poor inhabitants, but on the part of those who have authority.

Leading westward from Brunswick-square, there is a long and curiously constructed row of houses, for the most part let in tenements, and occupied by a dense population. It is known as the Colonnade. The front of the houses is supported by pillars, on the ground-floor, and there is a covered way beneath, 5 feet or 6 feet in width, which is raised several feet from the ground. The general arrangement resembles that of the well-known rows at Chester. On a line with the pillars, and almost even with the ground, there are numerous windows of apartments which, for about half their height, are below the surface. Stretching from one end of the Colonnade to the other, there are small shops, several of which are occupied by shoemakers, tailors, furniture-makers, marine-store dealers, and others. There are also to be noted several chandlers' shops and bakers' shops; and at a first glance it surprises that they all manage to find customers, for the footpath is but little used as a thoroughfare, and the shopkeepers must depend mainly upon the local population for support. After examining the houses, however, the surprise is lessened, for we learn that in nearly all of them there are families in every room, and in most of these habitations there are six rooms, besides the front and back shops, and the underground apartments to which we have alluded. Some years since several of the last-named rooms were occupied by families, but now they seem to be chiefly used as washhouses and workshops by persons of different trades. In front of the Colonnade there is a paved carriageway, with stables, coachhouses, and other buildings opposite, which by their dwarfed proportions, form a contrast with the tall houses of the adjoining street. Three archways lead to this place, one from Brunswick-square, and the other two at the western end. In every other direction the Colonnade is enclosed by lofty houses.

Several years ago we gave some account of this settlement, and then the drainage was very deficient: we are told that this has since been improved. Even if this be so to a proper extent there is still in the overcrowding of these tenements, and the small size and imperfect ventilation of the rooms and staircases, a proximate cause of much preventible disease. Of late smallpox has been prevalent, and from time to time there has been a great number of fever cases. Smallpox, at the recent visitation, had not been very fatal here, but we were informed that at the time of our visit there was a young woman lying dead from the effects of this disease in the house No. 7, which is situate near the Brunswick-square end of the row. Great excitement seemed to prevail in consequence of the father of the girl being too poor to provide money to bury her. The death took place on the Wednesday; and in the middle of the following Saturday, notwithstanding that application had been made to the authorities of St. Pancras Workhouse, the body had not been removed. So great is the danger of leaving the remains of the dead in the midst of the living, and so great the necessity for obtaining change in this unwholesome and revolting custom, that we will endeavour to describe as plainly as possible what was found in this house of death.

No. 7 is a double house, including ten rooms upstairs above the shops; and we were informed that in these there lived twelve families; so that there were more than one family for each room. A small crowd of anxious women and children was assembled round the doorway: in a small yard at the back, and close to the door of the general staircase was an uncovered dustheap, which was evidently neglected by the scavengers: the closet was untrapped and without water-supply, and was most offensive—a certain consequence where many people live in the same house and the water is not properly arranged. In the cellar there was a lead cistern: the place, having been used for washing, was neglected and filthy. The dead girl lay in a room at the top of the house; and, as the writer ascended the narrow and inconvenient staircase, door after door opened, and the women and the children stood in groups, thinking that the stranger had, perhaps, come to make arrangements in connexion with the removal of the corpse. On reaching the room it was found to be of very small dimensions, and that it was occupied by six living persons besides the dead body. The width of the room might be almost spanned by stretching out the arms; and the length was not more than 9 feet. Lying partly in one box, which had no lid, and on another, was an object entirely wrapped in a half-dirty sheet. The sunlight gleamed upon the bundle through the little window; and, knowing this must be the remains of the girl, it arrested our attention. "That, sir," said the father, pointing towards it, "is my poor daughter. You see that six of us sleep and live in this room, and the body has for two days past been going to decay." We will spare our readers some further observations that followed. There was but one bedstead in the room for the whole of the living part of the family. This was one of the bedsteads which are much in use in apartments where space is limited. They can be turned up during the daytime, and at night they are let down. In the present instance, when the bed was made, it would cover the greater part of the floor, and be close against the boxes on which the decaying body was placed. We have sad memories of other London scenes, but not of many more shocking than this. The father, a decent-looking and civil man, mentioned his destitute condition. For the sake of his children and the neighbours he had a dread of allowing the body to remain uncoffined until another day. He was accordingly aided in an application to the neighbouring police magistrate, who kindly gave prompt orders for the immediate removal of the poor girl. It is, however, but right to state, that the entire blame of this matter did not altogether rest with the workhouse officials. Nor does it seem that the death

Bloomsbury.

of the girl, who was about seventeen years of age, was to be attributed to smallpox, although she died after an illness of about a week. The father says that his daughter died on the Wednesday: then he had to get a certificate of the cause of death from the surgeon who had attended the case; and then to obtain a certificate for the burial from the registrar, and that this latter was not received until Thursday. In the hope, as we believe, of getting the funeral arranged in some way without the aid of the parish, this certificate was not delivered at the workhouse until Friday. Such delay is to be regretted, and we particularly refer to it, for similar causes lead to a considerable amount of mischief in the crowded dwellings of the London poor. There was, however, sufficient time on the Friday to have had the body removed; and up to the middle of the day on Saturday no one seems to have been from the workhouse for the purpose of making the inquiry which is usual before a coffin is supplied to those who are so unfortunate as to need this kind of assistance.

There appears also to be some care required respecting the dating of the funeral certificate, if, as we are told, the certificate by the registrar, which permits a burial to take place, is dated on the day when the undertaker or relative applies, and does not bear upon it the exact day of the death as returned by the medical attendant.

In this case the father took the certificate, which did not state the true date of the death, to the workhouse, where he had no opportunity of giving much explanation of the need for immediate action, as a little grated opening in the door was the only means of passing the paper to the authorities. There is a great reform needed in the management of the workhouse door: here there should be persons of intelligence, civility, and humanity: instead, it seems to be the present plan to place persons in this important position who are unfitted for the duty.

We have spoken at some length of this case of the neglect of burial, with a view to obtaining the timely removal of the dead from the bed-side and the close neighbourhood of the humble table and scantily furnished cupboard of living people. It has been a painful task, but the story tends to show the crying necessity there is, in the immense and daily increasing population of the metropolis, for a change in funeral arrangements in the overcrowded dwellings in which so many thousands are forced to struggle for existence.

Many of the poor Irish are difficult to deal with in this respect; but even in that portion of the London population there is improvement to be noted; and amongst others the change is more marked. No doubt much of this good has been wrought by the example which has been set by the higher and middle classes of the community in the beneficial practice of the early interment of the dead. The great masses of the poor, however, require to be educated on this point: prejudices need to be removed; but, above all, we require facilities which are not now to be found, for the temporary reception of the dead, so that they may be removed with decency from the crowded rooms in which they lie. It is not only for the very poor that such accommodation is wanted, but there are thousands of respectable mechanics who do not need, and who would scorn to ask for, parochial assistance; who are obliged to wait for the payment of club-money, in case of a death in the family; and who, if they knew it was to be had at a convenient distance, and for a moderate payment, would be glad to have their dead taken away in proper time. There is now accommodation of this kind in connexion with the Great Northern Railway, and in the Borough in connexion with the Woking Cemetery. We believe, however, that the nature of the provision is not generally understood. There must be great changes made in these matters, and it would be well if clergymen, missionaries, medical officers, and others who move amongst the poor were to direct particular attention to this subject.

It is very disheartening to note the slow progress of necessary sanitary improvements, and how persistently arrangements which destroy health and life are continued. Years since, the wilful murder which was perpetrated in the establishments of several of the most fashionable of the West-end milliners and dress-makers was brought into notice; and, urged by the strong statements of the Press, and by the fierce expressions of public opinion, efforts were made to shorten the hours of female labour, and in other ways improve the condition of the young girls and women who were employed in preparing the adornments which fashion demands. Meetings of known ladies were held, and such resolutions were passed that some thought an end had been put to the disgrace of providing garments for display by the sacrifice of health and life. A ladies' league was formed, the members of which engaged to refuse to deal with any court dress-makers who kept the members of their establishments at work beyond a reasonable number of hours in each day. Some good was done by this movement: certain of the tradespeople reformed their plans; and a few have continued to adhere to their right and honest resolution.

But the wheel of fashion whirled round, and stopped at new places. Many ladies forgot their good determination: some, we believe, forgot the workpeople altogether; and, for the most part, matters now are nearly as bad, and in some instances worse than they have ever been. We have often directed attention to these evils; and from time to time there have been accounts of suffering in such establishments which have caused sensation for a short time, but all was soon again forgotten; and we have no hesitation in stating that during the four months or so which make a London season, hundreds of young girls are ruined in health, and many are laid in untimely graves. The public do not, however, hear of these cases; for when no longer able to work, those who are fortunate enough to have homes retire to them, and others find shelter in hospitals and workhouses. Coroners' inquests are not held on the bodies of those who have, nevertheless, been done to death.

The recent case of Mary Anne Walkley, in Regent-street, has again awakened attention to this subject. A female who has suffered—an orphan—who was obliged to seek employment in one of these establishments, says that a bell rang every morning at six, and in a quarter of an hour after all were expected to be at their posts. At eight o'clock the bell called all the workers into the kitchen, where coffee was already poured out, and two thick slices of bread and butter prepared for each: when these were swallowed the girls returned to work until one o'clock, when again the bell rang for dinner, which was ready on each plate to be eaten as rapidly as possible. This meal consisted of two thin slices of meat and two or three potatoes. Tea and two slices of bread and butter at five o'clock; at nine bread and cheese, and a small mug of table-beer; and then to work every night until after twelve, excepting Saturday night, when they left off, as twelve o'clock ushered in the Sabbath. After working all night, says this authority, "I have several times been carried fainting from the room from sheer exhaustion, and have seen as many as three of my companions drop from their seats in one evening." The food was good, but insufficient, and many complained of hunger: they "never saw the street-door but once a-week, so had no chance to get anything to eat out of doors." Another retired dress-maker says that she has worked from four o'clock a.m. till half-past ten o'clock p.m.—eighteen hours and a half—in a small hot room; and has seen the candles carried into the workroom, to be ready for the next morning's work, at half-past one a.m. Life in our workhouses and prisons is preferable to this terrible labour. No wonder sickness and death should come, and that on the Sunday's holiday young girls—tired, irritated, and ill fed—should be tempted into evil courses.

The law has thrown its protection over factory girls, and we are no longer disgraced by allowing the labour of women and girls in coal-pits and mines. It is quite time that some means should be used to prevent unnatural and killing labour in the metropolitan workrooms. In 1842, the Earl of Shaftesbury endeavoured to legislate on this subject, but his Bill was lost. It was too bad, said his lordship recently, without going into the question of the hours of labour, to find, as the inquest had proved, that young persons were kept at work from six o'clock in the morning until eleven at night. They found in many of those working-places cruelties were practised on young women that might gratify the heart of even General Butler in New Orleans. He asked if the Government would adopt the same legal regulations for ventilation and cleanliness in milliners' and dressmakers' workshops as they had already adopted in the case of the bakers? The numbers were about the same: the bakers, 12,000; milliners and dressmakers, about 15,000. Seemingly nothing could be more reasonable than this, but Earl de Grey and Ripon, on the part of the Government, made objection to it, and suggested difficulties. There always have been difficulties in the way of making improvement. It was said that a law for regulating employment in mines was impossible. It was the same in connexion with Lord Shaftesbury's Factory Act; the Smoke Prevention Act; the Common Lodging-house Act, and many other alterations which are now easily carried out, and which have proved of the greatest advantage to the community; and we see no reason why care should not be taken in connexion with the workrooms of the metropolis and other large towns in which more than a certain number of persons are employed; and it must not be forgotten that, not only the workrooms of the artificial flower makers,* but many of the other work-places in which there are large numbers of girls, women, and others pent up for long hours together, are dangerously overcrowded, and prejudicial to health and life. In connexion with the discussion as to Mary Anne Walkley, the Home Secretary was of opinion that the death of the poor girl was accelerated by long hours of work and insufficient ventilation, and that there could be no question it was very desirable, if possible, to establish by law regulations that might prevent the occurrence of such evils as this case brought to light; but he was not prepared to say that it would be possible to establish a general system of registration and inspection with respect to such employments, they being frequently carried on in private houses. We differ in our view of this subject from the Home Secretary; and this opinion is founded on long and careful inquiry. We have seen with our own eyes the extent to which overcrowding and bad ventilation exist in many parts of the metropolis, and feel sure that, if the greatness of the evil were made generally known, the present state of things would not be much longer allowed. As regards work-rooms, and the bed-rooms and eating-rooms connected with them, a proper allowance of space and good ventilation would be beneficial to the employers as well as to those who are employed.

The attempt in Bloomsbury to get "tidy rooms," and flowers in the windows, has our best wishes.

THE EXHIBITION GALLERIES.

EVERY one knows by this time that the House of Commons, on Thursday, July 2nd, refused the vote of 105,000*l.* asked for by the Chancellor of the Exchequer for the purchase of the Exhibition Building and preliminary adaptations, by 287 to 121, amidst excitement and uproar scarcely to be paralleled in the recollection of any in the House; excitement altogether uncalled for, most unseemly, and not easy of explanation.

The Government appear to have fallen upon the same course that we suggested; and proposed to perfect and appropriate the picture galleries, and to make use of the rest of the building for a time only and without any expenditure upon it.

> We propose, said the Chancellor of the Exchequer, to proceed on the presumption that the galleries are to be preserved, and the northern façade, towards the Horticultural Gardens, is in some manner or other to be preserved, subject to future consideration; and that we may proceed with the 2½ acres for the purposes of the British Museum. The effect of that will be that we give over to the future the domes: we give over to the future 19½ acres of ground. We ask authority to proceed on 4½ acres of ground. I need not refer again to those general statements made on a former night. They were statements we thought ourselves bound to submit with regard to the building as a whole. We could not then enter into details. You now understand within what limits we ask you to give us possession of the building. I will now state the finance of the case with something approaching perfect precision for the proposal I make. By this means we get rid of all matters of dispute. I make a debtor and creditor account. We have to pay 120,000*l.* for the land, and for buildings, on a portion of it, which cost 30,000*l.* We have to pay the contractors 80,000*l.*

However, as we have said, the House would not assent, and would have made strangers believe, in negativing the resolution, they were saving their country from some dreadful gunpowder-plot intended to destroy Queen, Lords, and Commons, and their little ones. Some voted against it because they wanted to embarrass the Government; some because they thought it "a Court job," whatever that may mean; some because they did not like the "Department of Art," which has managed just now to bring a good deal of abuse on its head; and many because the building is unquestionably unsatisfactory in many respects;—and thus came the overwhelming result.

The Council of the Institute of Architects made a report upon the structure, ending with the expression of their opinion that it was "the duty of the Institute to petition Parliament against the proposed scheme for the purchase and reparation of the building, as a transaction impracticable in itself (?) and fraught with unprecedented probabilities of discredit and disappointment;" and a petition was accordingly presented, and was, of course, and quite legitimately, well worked by those who

* See *Builder*, vol. xx. p. 457, for some illustrations.

opposed the vote. The block plan accompanying the report of the council shows the following figures:—

"*Notes of Estimate per Acre.*—The cost of a plain substantial public building in London is *per acre* about 100,000*l.* Estimates quoted by Lord Palmerston for an extension of the British Museum, 113,000*l.*, 103,000*l.*, 100,000*l.*; estimate quoted by his lordship for a patent museum (probably a substantial shed), 33,300*l.*; cost of the International Exhibition Building (as a temporary shed), 18,800*l.*; price now asked for it as dilapidated, 4,850*l.*; proposed outlay, chiefly in reconstruction, 17,200*l.* (being nearly equal to the full original cost); allow for convertible value, as an extreme, half-cost, 9,400*l.*:—value resulting for the building as converted, 26,600*l.*, representing a standard much below that even of a substantial shed."

These figures, as it seems to us, looking quietly at the matter without any of the "feeling" which has been imported into the inquiry, do not tell very strongly against the purchase, the reporters themselves putting down the value of the building as double what was asked for it. However, let that pass. There was no particular reason why they should not report against the purchase of the building if the majority so determined; nor why the House of Commons, under the same circumstances, should negative the vote; but the latter might have done this like men of business and not like a parcel of wild Indians over a coveted scalp.

Notwithstanding all this vehemence, the strongly expressed condemnation of some of our architectural brethren, and the vote of the House of Commons, we retain and reiterate our opinion that, if the structure can be purchased for the value of the old materials, to pull down the solid brick building comprising the picture-galleries would be an act of extravagant wastefulness,—a sin and a shame.

We sincerely trust some means may yet be found to obviate the necessity for such an unwise act. Steps, however, should be taken at once, for the contractors are already erecting a hoarding all round the building, and have announced their intention of beginning to pull down immediately.

Growing out of the discussion of this matter, Mr. C. B. Adderley addressed a singularly foolish letter to the *Times*, depreciatory of professional architects. Mr. Scott, writing in reply to it, says:—

"My profession is an unhappy one, and seldom more so than in the matter of the Exhibition building. It was convenient to the Commissioners to employ in its erection an 'official' rather than a professional architect: there was nothing either objectionable or unnatural in this; but it was thought by those who determined on it that a sort of moral massacre of the architects was necessary to its defence. Since the erection of the building it has been equally unsafe for an architect to criticize or to extenuate its imperfections; the one being attributed to jealousy, the other to obtuseness of perception; and now that the building is condemned it is thought necessary to imitate the King of Dahomey, and to offer up a holocaust of the entire profession to appease its *manes!*

Possibly, however, now that the recent excitement is somewhat abated, a little quiet reason may lead people to believe that the profession and the art of architecture are not so utterly severed as Mr. Adderley and his teachers would desire, and that Captain Fowke and his great work merit, perhaps, neither all the praise nor all the censure which their opponents and their defenders would claim for them." . . .

"The fact is that Mr. Adderley's views, whether in depreciation of architects in general or in exclusive praise of Captain Fowke, are simply ridiculous, and must be equally distasteful to that gentleman as to those at whose expense he is so ludicrously flattered: nor do I know on what ground Mr. Adderley assumes the right to sit in judgment on an entire profession, unless it be from his temporary connexion with that department of fine art the first axiom of whose artistic teaching is supposed to be the incompetence of all architects excepting such as are extemporized by themselves."

PRAISE AND CONDEMNATION.

WHILST the subject, "The Right Use of 'Models' in Architecture of our Time," is under the attention of readers of the *Builder*, we may add certain observations that seem, with those in a recent number, to be required in the present state of the art, and equally needed to be taken into consideration by persons who volunteer criticism of modern works. Our aim, now, is to offer something that may at least render more salutary, expressions of praise and dispraise; of which, criticism, as it is ordinarily, consists. Rightly uttered and received, comments upon a modern work should solely tend to the advancement of the art, and should neither have been meant to wound, nor have a similar effect from peculiar sensitiveness of the author of the work. This could be asserted as to all works, or not only those of art; or it could be said referring to any of the arts, and not exclusively to our art: but we perceive, at this juncture, reasons for dwelling upon the point of the right object of criticism in architecture. Our former article was aimed at a prevalent misconception on the part of the public, though one which many architects made themselves practically sharers in: our present attempt is directed against an error of which architects are generally guilty. There is in vogue, a damnatory style of giving opinions, which is weighing heavily upon the growth of the art itself, by inoculating the public with the same spirit,—or at least confirming a habit or conceit the least commendable in the practice, and substituting it in permanence for generous appreciation,—whilst sacrificing utterly the end and aim of art in works, namely the exciting of pleasurable emotion. To show what is the error into which the profession fall, we will examine the same error as it is made by the public. Let us suppose a case, and describe it—commenting as we go on.

One of the public, having in the ordinary way, or as member of a building-committee, employed an architect to make a design, takes, in the average of cases of the presentation of the design to him, the course of expression of opinion which may be stated thus. First, being a gentlemanly man, and really astonished at the neatness and elaboration of what he sees on paper,—albeit not quite satisfied that such labour was necessary,—he may proffer something intended to be courteous; or at least, he listens to what the architect has to say descriptively of the drawings. It may be noted, here in parenthesis, that the drawings are always, even as spoken of in the House of Commons, "the plan," or "the plans"; and the design of the general exterior is always "an elevation." Beyond the erroneous use of terms, there are in fact bad effects resulting in *art*, from this use; and misconception of the process, and nature, of architectural design, is involved. Preliminaries having been arranged or said, the employer next bethinks himself that the time has arrived for his stating his opinion, or giving his decision. Let us pause therefore to note what are his qualifications.

He has never sought to have any taste for architecture,—or if otherwise, it is not the *art* that he has given attention to, but only something which may be antiquarian or ecclesiological;—generally, he at once announces that he knows nothing of the subject. Lord Granville, lately, in the House of Lords, declared that "with regard to the question of taste" (which most persons would say was to *some* extent concerned in that of the policy of buying, or of keeping up and stuccoing, the Exhibition Building), he had "no pretentions to taste;" that is, he confessed ignorance of one of the premises of the question then before him. And he added, as to such pretentions, that he was "sometimes glad" that he had them not, seeing that "those who do pretend to have taste certainly squabble among themselves most uncommonly as to what it ought to be." As to the squabbling, indeed, Lord Granville touched one of the points which may deserve notice farther on.

Our employer not merely feels that he is the man to decide,—the house being for his habitation, and to be built at his expense,—but, though he had just before proclaimed his ignorance of architecture, he has a curious notion that he must execute a judgment; and that, to have a right opinion, or the credit of having one, the sentence must be condemnatory, and the execution death.

With the evidence which there is of growth of appreciation for paintings,—of all but works of the highest class at least,—we should not contend that all works of art are at present inoperative on the sense of pleasurable emotion, with the multitude; but that the force of the mistaken-critical conceit largely reduces the appreciatory spirit, those who visit an exhibition of the Royal Academy need but to open their ears to become aware of. The position which sculpture holds in comparison with painting, and the analogous position of architecture, the art, show that the representative element to which colour so powerfully aids, has much to do with the public appreciation of painting. There is an art, indeed, which is well appreciated, and in which, representation, properly, of incident or scene, has no place; we mean music, instrumental or non-operatic. The reason why in this portion of Europe, one sense can be charmed, whilst another sense hardly can, has been talked of, so far as saying that it deserves to be searched for and investigated. It still so deserves to be, and most thoroughly. There are races whose position in the art of music would be lower than is that of the British people in the art of architecture; and, though the "charms" of music are said to have an effect on men and beasts in the savage state, we are inclined to believe that both the ear and the eye can be more or less in the condition of susceptibility or appreciation, just as the means of cultivation may happen to have been hit upon. The remarks recently quoted, referring to French architects, tend to show even that the appreciation of *art* is somewhat less than it ought to be in France; and what we know of the decorative arts there, which are characterized by prevalence at the same time of many different styles, though all skilfully reproduced, tends the same way. But, there is a liveliness, or aptitude, or what we generally call fancy, which not all the misapplication of the properties of materials, found in French decoration, can entirely prevent from standing out as existent; whilst it is an essential, and perhaps *the* essential, of art. There are gradations of appreciation of art amongst nations, during the progress of time; and there are differences between contemporary nations. What occasions these differences we have not found out, any more than we have what causes those of the appreciations of poetry by individuals, that are as common as the differences of appreciation of music.

Our patron or employer, though disclaiming knowledge of architecture, has a notion that some decoration is desirable for his house: at least, he sees that in other houses, something of the kind has been attempted. He may proclaim himself to be indifferent to ornament; but in every object, a brick-front in Harley-street, or a deal-box, there is evidence of a concession to that taste for decoration which is one of nature's gifts. The brick-front may be not so bad a thing as the front with a profusion of ornaments in a material which is imitative of another material: but the value which there is in decoration is shown in each; though there is evidence that ornament can be spoiled by the use of it. Having a notion, then, that architecture is required, or at least usual, our employer does not positively object to features of decoration. Worse, in our view of the case, than that, he may even demand a particular style, or conjure up a certain character, say Gothic or Italian, before the requisites of convenience, and the circumstances of site and available materials, which would conduce to a special character of the building and art, have been thought of; or he will require his architect to be fortified as to the propriety of the design by being able to rank it of a style, and to justify it by approved examples. We have adverted to this fear of being out of the fashion before. The fear, it must be admitted, has operated greatly in church-architecture, and has tended to the result of our land being covered with structures, erected in the last twenty years, which cannot be distinguished from those of the Middle Ages,—structures wherein the key-note of the planning has not been the provision for a certain number of worshippers and hearers, in a building adapted to the Protestant ritual, but the reproduction of certain forms that were deemed to carry with them old associations. Dissatisfied with similar reproduction where there was no excuse of association, many architects holding in favour the Gothic styles, some few years since betook themselves to a fresh course in their designs for public and private buildings. Here, however, by again following, and this time the tastes of one writer, they again reproduced Mediæval works,—and not our Gothic, but a foreign style, whilst architecture inferior to English Mediæval. The fear we have spoken of, is one of the causes tending to repress the flight of art from the existing level. This is so; although there are two essentially different influences at work. Both of them are unfavourable to art. One man *will* be conspicuous, and have something quite different from what belongs to his neighbours: another is afraid of being marked for and by difference, even though it may spring from the exercise of taste. It must be confessed that there are a sufficient number of architects ready to minister to the error of the first kind. That of the second kind, however, is common. Many a man who commissions a house to be built for himself, and who finds houses right and left of his, with stuccoed fronts, will stucco his house also; and we have known the architect of a very tasteful structure, utterly fail to please his employer, simply through the circumstance that, as the effect of the design was good, and different on that account solely, to everything near to it, every one stopped in face of the house to look at it.

If, however, the character of architecture should have penetrated the district, the mind of such an occupant of a house, is easy on all points. In many districts, the variety of styles is considerable: therefore the choice, of old styles at least, is extended,—whether advantageously, we should, perhaps, doubt. Indeed, we could point to a common practice of the architects who prepare designs for the laying-out of building-ground, and who

exhibit views showing the houses differing in their styles as well as in their materials, as one which is not favourable to the public appreciation of the most important part of architecture. On several estates in London,—take the Bedford estate for example,—there is another influence apparently at work, that of value of the property for letting; which it seems is found to be greater when a concession to the vicious taste for stucco is made. Here the imitative material is being rapidly substituted for the brick; and sham mouldings are being added to windows and doorways. Whatever the deficiencies architecturally of the old material and the plain apertures, the following the fashion of London is not a gain in effect, whatever it may be otherwise.

The employer then, in the majority of cases, recognizes that something decorative is wanted in the exterior of his house; and the present tendency is to multiply the cases of this recognition. He admits it thoroughly as regards the interior, a portion of the building which he deems to be the business of some one who is not an architect; but he considers the being in the fashion, certainly of not less importance here than for the exterior. Altogether, the tendency of this condition of things is towards the prevalence of *styles*, rather than the prevalence of *art*, whilst it is not favourable to either style in particular; and so, is not to the general appreciation of art that exists in any one of them, or that might and would be imported into such one.

From either of the two causes,—the fear of departing from the old or the fashionable track, or the conceit which substitutes condemnation for appreciation, or for sound criticism at least,—the design that is the one first made by an architect commissioned to erect a building, is often, or rather is generally, objected to, in the whole, or in its details. Of useful criticism, indeed, of the works of architects, by one another, there is too little. The art would be much invigorated by comparisons, and interchange of ideas, such as, when speaking of exhibitions of competition drawings, we have always allowed that those occasions might afford the opportunity of. But the case is quite different with the criticism of an average "patron" or employer, or even with that of an architect who has not followed the gestation of a design from its commencement. The author of the design ought to have already accomplished what seemed to him his best under the conditions that he set out with; and there ought to be danger in any one else modifying any features, the result of later stages of the process, without having had the preparatory course to them from the conditions. There should be danger, alike in cutting down work to reduce an estimate, or in adding work and decoration. But, to be obliged to alter a design to satisfy the simple *ipse dixit* of an employer,—the architect feeling that he has made the nearest approach to a solution of the original problem, and that every alteration must be a step away from the solution,—is the most difficult of the positions in which one, having to reconcile the aims of the art with the business of the profession, can be placed.

Now, it is painful to witness amongst architects, the prevalence of a condemnatory style of criticism, which if not due to the same causes as the condemnation by patron or employer, may be readily mistaken. If this sort of criticism be not killing the art, it is, as we have said, repressing the growth and the appreciation of it. When it is heard, and seen, that architects, artists, who "pretend to have taste," "squabble among themselves," and are so very far from agreeing what taste "ought to be" as to be incapable of deriving enjoyment from the contemplation of the works of one another: when it is perceived that there is a contest,—one that should have been never possible,—about styles,—a contest which leaves art and the perception and enjoyment of it, almost out of consideration,—the public may well come to think that neither, indeed, is there any accounting for taste, nor are there definitions of the course and principles of architectural design, in rules that are written, or in those which can be felt. The only glimpse of hope that we have, of a better state of things, is derived from a knowledge of the state of our art in France, already adverted to, and from perusal of French commendation (to which we may have to refer in another article) of our decorative arts as progressed since 1851. The French manufacturers of furniture may be followers of a multitude of systems of ornamentation. We saw this, last year. But in architecture, the French architects have been able to achieve great part of the "battle of the styles,"—which has been fought in France as with us; and they are now utilizing all styles, and models of every class, as the recent street architecture of Paris will show, in works that are sufficiently in harmony with one central style,—a style of the day. The time has surely arrived for the statement of some principles to be universally accepted, not as saying how designs should be made, which ought never to be expected, but as showing what all should agree in condemning. And let it not be supposed that a great step would not be made thus, though it would be one stopping short of saying how things should be done. The *matériel* of art is really vast as the field of nature; and the recognition of what should not be used, is a removal of embarrassment. Sooner, or later, however, the misunderstandings about styles must be made to give way for the recognition of art generally, and for the consistent utilization of the materials that all styles present. It concerns the welfare of the profession to hasten the advent of such period. Architecture, the art, is being starved out by the condemnation and abuse of works, by architects themselves; by condemnation uttered from prejudice in favour of something which may belong to style, but does not generally pertain to art; by abuse, of which the characteristic propelling force is a combination of self-conceit and want of conscientiousness. He who states his opinions with humility, and after the disposition felt, and still preserved, to consider fairly the views of others, is the sort of man whose opinions are of the most value. It has been said by certain writers, that the time is one for the ruthless extirpation of all, what they deem to be, heresies. But the spirit in which this extirpation is preached, distorts conclusions; and art itself passes out from the field of contention. In place of such spirit, we should be disposed to recommend rather a readiness to be pleased, as less fraught with evil consequences, and less tending to ultimate loss of the art, and of the business and mission of architects. At least, let it be the endeavour of all, not merely by the examination of their own principles, but by the substitution of real criticism for condemnation and "squabbling," to bring about a condition of our art in which works generally may be appreciated and admired, and be the sources of gratification that works of art should be; and yet may, when differences of opinion are raised by them, be suggestive themselves of reasons which the designer had for what he did, and productive of the admission from the critic, that whilst his opinion might have differed, there was a case made out and a result to be admired on the other side. Again and again, we say, and be it never forgotten: the great mission of the art beyond the provision of a building, is the production of pleasurable emotions; and this mission, which architects should always hold in the public recollection, they are now setting the example of leaving out of consideration altogether.

THE 1851 EXHIBITION COMMISSION.

ON the 6th, Mr. Ayrton, in a speech wherein he mixed up the '51 Commission, the '62 Commission, and the Department of Art, showing he had not a very clear knowledge of his subject, moved,—

"That in the opinion of this House the purchase-money of the land at Kensington should be applied by the Commissioners of the Great Exhibition of 1851 towards discharging the liabilities of the Commission; and that the Commission should be determined and the property now held by the Commission be vested in the Crown, subject to any interests now existing therein, and to any charges thereon."

He failed, however, to show that the House had any right to hand over this money to general purposes, and the motion was very properly negatived by 165 to 42.

Whether or not the Commissioners have done or are doing all they might with their resources for the advancement of the fine arts and practical science, is another question, and might be usefully considered.

Mr. Lowe, in explaining the position occupied at this moment by the 1851 Commissioners, showed how wisely they had managed their affairs in a commercial point of view. He said one ground of offence was that their property amounted to more than 300,000*l.* when all encumbrances were paid off. He believed the Commissioners must plead guilty to having started with 180,000*l.*, and having so managed that they had sold land to the Government, on which the South Kensington Museum was built, for 60,000*l.*, which was worth 100,000*l.* at the time, and was now worth 120,000*l.*; that they had also sold land to the Government for 120,000*l.* which was worth 260,000*l.* or 270,000*l.*; and that they were still in possession of property worth, after all encumbrances were met, about 300,000*l.*, over and above a reversionary interest in the Horticultural Gardens, which might, if the gardens failed, place them in possession of 22 acres of valuable land, and if the gardens succeeded would yield 2,000*l.* a year and a contingent share of the profits. Such is the balance-sheet; and the Commissioners may certainly point to it as an instance of financial success in a short time hardly to be paralleled in commercial undertakings.

ON GEOMETRICAL AND OTHER SYMBOLS.*

THE PSYCHOLOGICAL KEY.

IT appears, then, that Freemasonic symbols, such as the hexalpha; the square and compasses crossed; the cross itself, and the symbolical N, in all their varied modifications; with many others, relate, or at least must have originally related, to "the architecture of the heart," or "the inward man," as "the temple" of the illuminative "Spirit" of God; which Spirit, when it shines as "the Light" in its temple, "crucifies the flesh," or so transfigures and entrances the man as to make him "dead in the flesh [by "the shadow," or "semblance, of a voluntary death," as the coffin symbolises]; but quickened by the Spirit,"† as is denoted by other emblematical formulæ, such as by the sudden relief from blindfolding, "in the Light" of "holy night" and of the "new birth;" and by the refreshment and recreation of the "free and accepted masons" with wine or spirits. And as Freemasonry and ancient religious mysteries in general,—on both of which the consideration of Masons' marks has obliged me to enlarge much more than I intended at the outset,—are believed to have been identical in their nature and purpose; and as the invocation of the oracular and divine Spirit in high and ecstatic entrancement, or in "the semblance of a voluntary death," appears to have been a leading feature in these mysteries; we thus have indicated to us something still more definite as to *those precise regions* of "the inward man" to which Freemasonry and its coffin; its blindfolding; its ultranatural "Light" and "Spirit" of the "high noon" of night; and its Jachin and Boaz—its work-life and its *rest*-life and *refreshment* in the *Spirit*; as also its geometrical symbols of the inward church or temple, engraven on so many outward churches,—all explicitly point our attention; and not *merely* to *moral* perfection therefore, but *to the very roots and foundations of life itself*; as involving a mystery to be yet revealed; and as being the source of *a new and higher development of human life, to be yet evolved into physical and divine perfection, as well as into moral and intellectual.*‡ The tenets of the Freemasons, in fact, as indicated in their initiations and their symbols, agree with those of the hierophants of the ancient mysteries, as well as with mystical Christian doctrine, in regard to physical as well as to mental and moral development, maturization, or perfectment, and immortalization, by the efficacious means of that entrancing and illuminative Spirit, or inward "Light," which,—till evoked, or invoked, by (true and not merely by figurative or emblematical) initiation,—smoulders or slumbers in the human "temple" of the Divinity, as "the sleeping God in the waking man" (according to the Brahminical doctrine), ready for sudden transfiguration, by entrancement, into "the waking God in the sleeping man;" as I have shown in the papers on wing and other symbols, already more than once referred to.§

We *must* now, therefore, look a little more closely, if we can, into the particular *style* of that "architecture of the heart" of man of

* See pp. 273, 345, and 402, *ante*.

† Here, once for all, I would wish to note, that it is with a perfect knowledge of the ordinary or orthodox meanings of Scriptural passages, and not from ignorance, but advisedly, that, in many instances, I entirely disregard these meanings. As for those which I do attribute to them, the quotations are in general so made use of as, by themselves and the context, to indicate these meanings clearly enough without any verbal explanation. A concordance will readily show the book, chapter, and verse, where not specially given.

‡ On the subject of a new development of human life in connexion with these views, see article "On the Nature and Destiny of Man," in the *Builder* of 14th March, 1863.

§ It is said of an oracle, among the Montanists, according to Neander, that in it "God alone is awake, and man sleeps." The idea of God awaking is certainly Scriptural, as well as Brahmanical. Thus. "Awake! Why sleepest thou, O Lord! Arise . . . for our help" (Psalm xliv. 23). "Then the Lord awaked, as one out of sleep, and like a mighty Man, that shouteth by reason of wine" (Psalm lxxviii. 65). "Awake! Up my Glory! I myself will awake early" (Psalm lvii. 8). "I shall be satisfied when I awake with thy likeness."—"Shining Image," or "Glory" (Psalm xvii. 15). "Awake! Awake! put on strength, O Arm of the Lord. Awake, as in ancient days, in the generations of old" (Isaiah li. 9).

which the Freemasons mystically speak; and of which the ancients treat, in their temple mysteries of self-knowledge,—"the inward man,"—or the *nosce teipsum*; since it is here we must seek for a thorough and satisfactory solution of the symbolical riddle.

What! a psychological disquisition in the *Builder*? Perhaps even a metaphysical one! Well! if any of those professional and other readers of the *Builder* who take an interest in such subjects as the hexalpha on Prince Albert's Manchester monument, and the masons' marks (including the hexalpha) on so many churches, *want*, or would *wish to have*, an explanation of the true meaning and origin of such symbols; and if that explanation plainly, and relevantly, involve at least a passing glance into the "architecture" of the "inward man," and cannot be got at without such an introvertive glance; what *would* they have? An explanation without the explanation? Hamlet without Hamlet? If they do not prefer to remain in professional ignorance of any such explanation of the symbols used, or which have been used, by architects and builders, as well as by Freemasons and magicians, and also by Christian religionists, they must rouse up their own "inward man,"—look "within" their own anatomical or architectural outlines for a moment,—where, alone, the true church, or temple, stands; and whence, alone, the paradisical "kingdom of heaven *within*" *them*, and "the lord *for the body*," can "come;"—and so they may judge for themselves in this great question of the *nosce teipsum*: for *this*, in truth, *is* the question on which all such symbols directly bear: *the tenets and the symbols cannot otherwise be harmonized*;—and he who restively and inconsequently expects to be made to comprehend the original meaning and purpose of these symbols of the inward man without the necessity of taking a passing glance into his own wonderful nature, as "the *House* of God,"—"the *Temple* of the Holy Ghost,"—the *Church* of which *Christ* is the Arch Keystone, or "Headstone of the Corner,"—must be an unreasoning mortal, with a soul awanting in depth, however expanded in circumference; and had better rest satisfied without the explanation sought for, and pass on to some other subject.

At the same time, I am quite sensible of the impropriety of anything really like "a psychological disquisition in the *Builder*," even were it on the mere score of limits alone: and, although such an attempt as the present, in a publication like this, is surrounded with many other difficulties; I am well aware that,—however crippling to the argument,—I *must* confine myself, with the utmost and most restrictive abstinence, to the merest psychological indications in its support. Nevertheless, if, as I have already hinted, an explanation of such symbols as those treated of be desirable, whatever is relevant to that explanation ought to be admissible, as far as limits will allow; and the present inquiry is only one of *many* instances which go to show that it is hard to say what subject it may *not* be relevant or requisite for a thorough architect, professionally, or as such, to deal with or consider; or for the *Builder* to treat of, as one not beyond its province, even as a strictly professional paper; far less as a publication of miscellaneous and popular interest, adapted to spread abroad architectural and other art-ideas among the public generally.

In my first series of letters on Symbols and the ancient doctrines involved in them, and more especially at the close of these letters, it may be remembered,* I had worked out, from such doctrines (by help, however, of the psychological key to be now given), one general conclusion; that the mental nature of man was evidently regarded in these doctrines as being twofold, and antithetical, or reversible and alternative, as life-principles, human and divine, or Soul and Spirit, in conjunction; and—by sciential induction from the mythological and mystical doctrines,—Concentro-radiative, or Radio-concentrative, in potential form.

This conclusion was based upon such modifications of ancient doctrines as that of the Rosicrucians,—their *Compound* or human life, and their *Elementary* or spirit life, in the ideal conjunction of "a Rosicrucian marriage," being equivalent to a Concentro-radiative nature, in which the Compound or human life was the Concentrative and the Elementary or spirit life the Radiative;—and that of the Buddhists, in which the *concretive* state of pravritti was the Concentrative or human state, or "this life" of the Passé Buddha, and the *dissolvative* state of Nirvritti or Nirvana the Radiative or divine state of "the Buddha" himself;—that of the Brahmins, in which the *plastic* state of prakriti was equivalent to the pravritti or concretive state of the Buddhists and the compound life of the Rosicrucians, or the concentrative, concretive, and human life; and the state of "Brahm" or divine absorption, to the Nirvritti of the Buddhists and the elementary life of the Rosicrucians, or the Radiative, dissolvative, and spirit life;—and also that of the primitive Greeks and Druids, in which the twofold Apollo, comprising a *creative* and *destructive* principle in one human form, indicated the same concentro-radiative nature in the noblest and most fully developed form of the God-man or man-God,—human, or concentrative, and yet radiative or divine, in alternative reversal;—the normal and undeveloped type and precursor of which twofold and alternative nature, in the present state, or duality of states, of man's imperfect form,—whether regarded as fallen from a past, or as not yet matured into a future, state of perfect development,—is the alternative reversal of the two states of waking and sleep,—waking as the concentrative, and sleep as the radiative; although the pure and exalted radiative, like the fairy queen, Titania, "strikes *more dead* than common sleep," as Oberon has it in "Midsummer Night's Dream;" and is hence more able to

> "——— *Dissolve* me into *ecstacies*,
> And bring all *heaven* before mine eyes,"

as Milton sings in "Il Penseroso."

I shall now endeavour to show that the very same concentro-radiative principles, thus deduced from mythological and other religious doctrines, are scientially and readily deducible from a consideration of the nature of human life itself, *apart altogether from any such doctrines*; and that these psychological and pneumatological principles involve a *reason* for precisely such symbolical forms as those of which I have just been treating.

Before attempting to do so, however, I must here note the corroborative and somewhat remarkable circumstance that a coincident mythological and *symbolical* conclusion closely analogous to my own *psychological* and guiding one, has been drawn from an exclusive consideration of "Symbolism as a Science," by Dr. Barlow; who, in the *Builder* of 17th March, 1860, says;—

"In the remarks which I hope to have the honour of reading on Monday evening before the Institute of British Architects, I have endeavoured to give a scientific character to symbolism in art by tracing it up to its first principles in the theologies of ancient nations, the Chinese, the Indians, the Egyptians, and others.

In this way, I have arrived at *two principles or agents in nature* which do not admit of further analysis,—LIFE and LIGHT: these, I find, will furnish, or rather explain, the most recondite symbolism with which we are acquainted."

The coincidence and corroboration here occurring, I say, are remarkable; inasmuch as the "Life and Light" deduced by Dr. Barlow from a consideration of symbolism *per se*, as a science, are clearly identical with those two principles, the Concentrative, (or Life,) and the Radiative, (or Light,) psychologically considered, of which I am about to offer a few indicative hints;—principles which have guided me, as by a sciential and *extrinsic* as well as *a priori* light, to kindred symbolical and religious conclusions, without any pretension, on my part, to that legitimate and exclusive induction, based solely on a consideration of symbolism itself as a science, to which Dr. Barlow alone can fairly lay claim. And if I have been enabled to develop these common principles further than Dr. Barlow has yet done, it is to psychology and not to mythology that I am chiefly indebted; my mythological, or at least symbolical, knowledge being very limited by comparison with his.

The mind of man may be regarded as *threefold* in more aspects and senses than one. It has three phases or aspects,—potential, sentient, and sciential; and each of these is also threefold,—the potential comprising the propensities, the desires, and the will; the sentient comprising the corporeal feelings or senses, the affections, and the conscience, convictions, beliefs, or faiths; and the sciential, comprising the concretive, constructive, or compositive; the connective, relative, or comparative; and the identitive or contemplative faculties. By the concretive, constructive, or compositive, so far as regards the mental phenomena, I would wish to denote that faculty, power, or force, by which the *elements* of the senses are concreted, constructed, or composed into mental objects of comparison, identification, &c. A kind of microcosmic world is thus concentrated, as it were, around the circumference of the mental sphere. This microcosm, however, is not so much a world of mere *images* as it is one of *estimations*. *The mind of man is an estimater of forces, and a measuring rule, as it were, for all creation.* Light and colours, for example, are subtle *radiative* forces, whose intensity is estimated by the seeing force or power, or the *concentrative* agent, in the eye and the brain.* So is it with all the senses; and *all we actually know of the nature of the outer world is, that it is a congeries of forces, concentrative and radiative.* By the mind; or in the mind, rather, and by the *soul and spirit*, —or, as I shall endeavour to show, the *concentrative and radiative*,—as the estimating forces; the infinitude without is converted into relative units in the concentrative faculty of conception; and these relative units are collected, by the further concentrative operations of the faculty of comparison, into classes, kinds, or species, whose similitudes approximate, more or less, towards *identity*; but the identitive faculty is the central or superlative one, as the conceptive, concretive, or compositive is the superficial or circumferential: indeed I have been in the habit of ranking these three mental regions as the positive, the comparative, and the superlative; and I consider (with Coleridge and others, it may here be incidentally remarked) that the faculty of Learning is one relating more especially to the positive; that of Talent to the comparative; and that of Genius to the superlative.

Now, from the multiplicities,—the infinities—*without*, to the identities and unities within; through the compositive, or conceptive, and the comparative, connective, or relative, *we can trace the manifest operation of a concentrative principle*, whose tendencies are from the circumference, as it were, of a sphere of force or action to its centre. The very terms conception, comparison, contemplation, and such like, imply the operation of a concentrative principle. It manifests itself in the ocular field, as we may call it, of the comparative faculty, or the understanding; as well as in the microscopic field of the conceptive or concretive faculty; and in the telescopic eye of the contemplative or identitive centre. In the comparative, for example, we find relations reared upon subjective terms; two or more conceptive elements ever being reduced to one relative element, in a way which may be thus symbolized;—

FIG. 1

the two extremities of the angle denoting the subjective terms, and the apex, or point, the one common relation reared upon these two as its bases. The same concentrative process, in its threefold and completive form, is still more clearly indicated in the lower or concentrative moiety of the following symbol;—

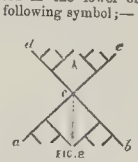


FIG. 2

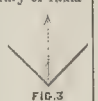
the base, *a b*, indicating a series of subjective terms, or relational elements, of the lowest order; and *c* the one common principle of identity deducible from them all. The arrow in either case is intended to indicate here the concentrative line of direction.†

This concentrative process, as I have hinted, seems to extend from the circumference to the centre of the mental organization, as is implied by *a*, *b*, *c*, fig. 2; and it can be shown to be as distinctly operative in the positive or lowest region as in the comparative or intermediate, and in the superlative, or highest. In short, there is a concentrative power or principle operative *in and throughout all* the mental actions and acquisitions, from circumference to centre.

---

* See *Builder* of 15th January, 1859.



* Some farther ideas of the relationship of these principles to the brain, great and small, and the nervous systems at large, will be found in an article on Christian Idealism in the *Builder* of 16th August, 1862; and in one on The Ancient Architecture of Ceylon in the *Builder* of 28th January, 1860.

† Considering that these symbols were invented by me without the slightest reference to mythology, and many years before I had ever thought of their relationship to religious symbols already in use, their similitude to the following—

which is sculptured on the entrance to the "transe" or passage leading into the "Sorcery hall" at New Grange, in Ireland, is notable; as, indeed, is their relationship to the Λ or masculine symbol of the Egyptians itself.

But a little further consideration shows also that there is a principle of the contrary or radiative description, represented simply as in fig. 3; or, in a sort of anatomized and outspread or separated but more completive form, as in fig. 2, *c, d, e*;—a radiative principle, operative—in fact, co-operative—along with the concentrative; especially in all re-presentations, re-member-ances, re-identifications, &c.

FIG. 3

Thus, nothing can be *remembered* unless what has before been *identified*, as an object of *attention*: that is, an object must be identified by and in the *concentrative* ere it can be re-presented in the *radiative*, and re-membered and re-identified in the *concentrative* again. And, on the whole, it appears that as subjective terms can be concentrated into relations; so relations can be re-radiated into subjective terms; and here we find the operation of what Dr. Thomas Brown calls the *relative* suggestion, on the one hand, and the simple suggestion—which may perhaps be more properly resolved into the *subjective* suggestion, in co-operative alternation with the relative suggestion—on the other hand.

The mind thus displays itself as *a concentrating and radiating sphere, circle, or cone;* and its phenomena are sustained or conserved under the mutual and conjoint action of these two distinct though co-operative principles, powers, or forces, —the concentrative and the radiative; and the latter of these,—*the Radiative,—is as it were a Light shining into and illuminating the dark Concentrative;* bringing within the range of the conscious or identitive principle, in the concentrative sphere, according to certain laws of relationship or association and suggestion, all the varied and heterogeneous acquisitions of the conscious mind; in new forms and combinations as well as in old; but being in itself, as a radiative sphere, *beyond*, as it were, or extrinsic to, the conscious principle, which is in and of the Concentrative enlightened by it, but not of or in the enlightening Radiative, *who is* ANOTHER *besides the* EGO *or* IDENTITIVE, and is not only "the true Light which lighteneth every man that cometh into the world," and which "teacheth all things, and bringeth all things to remembrance," whether in the comparatively dark moonlight of this life—the life of the concentrative; or in the glorious sunlight and open day of the radiative life, or life "to come;" but is also the true Lord and Grand Master of the human soul itself, who is his servant; and of the human body, which is his temple.

The concentrative principle, therefore, is the conscious principle or Soul and Life of man himself; while the radiative principle is a Spirit of Light to the Soul, with which it co-operates in the maintenance of that circle of alternate action,—concentrative and radiative, aggregative and segregative, synthetical and analytical, identitive and antithetitive, relative and subjective,—by means of which the mental phenomena are ever circulated, organized, and conserved.

Although the radiative may be said to send back from the one common centre to the one common circumference of the mental sphere what has been concentrated from that circumference to the centre; this venous and arterial system, as it were, of the mental circulation may be symbolically or figuratively laid open, or anatomized, as in fig. 2; the lower moiety or venous "Root" of the system denoting the Concentrative, and the upper or arterial "Branch" the Radiative; or they may be symbolized more elementarily and simply thus,

 ; or thus,  ; or thus,  , to

denote the suppression of the radiative in the concentrative life: it is also evident, indeed, that the same two principles, Λ and V, or the concentrative and the radiative, may be thus symbolized N; as well as by a variety of other geometrical forms, such as many of those in Mr. Godwin's collection in the *Archæologia* of 1813, the following inclusive;—

the conversion of angles into triangles in the hexalpha being regarded as indicative of the creaturely *limitation* of *universal* principles into the human and angelic form; the angelic being a *ray* of the radiative universal Spirit, and the human a *spark* of the unitive and creative Soul or universal Father of all, in whom we live, move, and have our being.

And here, though to a certain extent anticipatively, I may remark that the Unitive power, whence the Concentrative throughout creation emanates, being the Father of all, is of course masculine in principle; and the Infinitive power of the Universal Spirit, whence the Radiative emanates, is feminine. These are the two first and paternal principles; and the Son of the Unitive and Infinitive powers is also a universal and eternal principle, partaking of both; while the three are one, though this one is threefold,—a trinity in unity. And this is so even in the creaturely *Images* of the universal Godhead. The Concentrative is the masculine principle, and the Radiative the feminine, in human life; and the man or woman results, as an outbirth, from the union of these two. In the man, or masculine, the concentrative is more powerful, both in mind and in body, than in the woman or feminine, who is more radiative or spiritual and angelic in her nature than the man: hence the Radiative life, or *light* rather, in woman, will develop itself more highly than in man; and will, in fact, be as superior, comparatively, to that in man, as is the Concentrative life in man to that in woman. The Concentrative, therefore, is essentially masculine in principle, and the Radiative feminine; although, in *this* life, or the Concentrative life, *in both men and women*, the *concentrative*, or masculine principle, is of course *predominant;* as in the other or Radiative life, the Radiative, in both, is predominant, while the concentrative or masculine rests in the glorious arms, as it were, of the exalted Radiative, who shines as "a crown of glory" on the "Head" of this "man-child," and is herself "the woman, clothed with the sun,"—the "woman" who was "put away,"—the "woman" who, as "a new thing," shall "compass a man" (Jer. xxxi. 22): "she shall compass thee with a crown of glory."

The operation of these two principles, the concentrative and the radiative, can be traced in the compositions and decompositions, the concretions and solutions, of the body, and its conservation, as well as in those of the mind: indeed, the body may much more properly be said to subsist by *and in* these two principles, the Soul and the Spirit,—the Concentrative and the Radiative,—than these in it.

The question of the *relative intensity*, or power, of the Concentrative and the Radiative, in the mental and corporeal operations, was an interesting one which early attracted my attention. It appeared evident that *in concentrated, vigilant, connected, and collected thought, the concentrative was predominant or exalted;* and I soon came to be convinced that the very state of ordinary vigilance, or waking, itself implied the exaltation or predominance of the Concentrative, and the suppression and subserviency or humiliation of the Radiative as "a servant unto all." And as the Concentrative was thus clearly *plus*, and the Radiative *minus*, in the waking state; and as it seemed equally evident that the state of sleep, ordinarily or normally speaking, is more or less nearly an approximation to a perfectly *neutral, equilibriate*, and *passive* state; I soon saw that in sleep, as such, the Concentrative is reduced in intensity, and the Radiative increased in intensity, till the one becomes more or less nearly equal to the other.

Supposing, then, the Concentrative, in the waking state, to be, in general, as 3 (say), to the Radiative as 1; in perfectly passive and equilibriate leep the Concentrative will be as 2 to the Radiative as also 2;—these figures, however, in truth denoting algebraical and unknown powers or quantities, absolutely and strictly speaking. But if Con. 3—Rad. 1 be a representation of the state of vigilance or waking; and Con. 2—Rad. 2 that of passive or neutral sleep; what could Rad. 3—Con. 1 be? This was plainly and inevitably a possible, if not a practicable, state of existence or life, though normally dormant and unknown;—a state bearing certain special and peculiar relationships both to sleep and to waking; *but it could be neither the one nor the other:* in fact, it was *another state* of waking, watching, or vigilant life, of as perfect and complete a character, as such, as its relative antithesis, the state of Con. 3—Rad. 1: it *must*, as I then saw, be a strange state of Radiative, *Spiritual*, or inspired and illuminated life or Vigilance, or a waking Spirit or Pneuma, just as its antithesis is a state of Concentrative or *animated* Vigilance or life, or a waking anima, psyche, or Soul. The one might be called Spirit-waking, and the other Soul-waking; and Sleep a passive, impotent, state of equilibriation, or a beclouded state of misrule and mad confusion, in the midst of life, between these two extremes and counterparts; dividing them, as it were, asunder; as clouds may be said to divide heaven and earth; an ocean or a river two lands; or a veil two apartments. Sleep, in fine, was thus found to be a state in which neither the Concentrative nor the Radiative power,—neither the Soul nor the Spirit, is in full exaltation, and in cool and sober ruling power, with its fellow in subservient and orderly humiliation.

Though "the praise of all the earth," and "below'd from pole to pole,"
Sleep is life's Babel-waste of confusion;
Its simulative subtle sprite of lies and misrule,
And mother of devils and delusion.

The whole of this process of reasoning I had gone through quite independently of any knowledge or consideration either of the Spirit waking of the Hindus, the God possession of the Egyptians, Druids, Greeks, and others, or the lucidity of entrancement. I also soon saw that other and intermediate states of existence, such as those of dreaming, delirium, and vivid imagination, could now be ranged in their proper places, *between* sleep and ordinary or concentrative waking; and that they constituted possible states or currents of *continuous* existence at one time; and, at another, were merely *crossed*, as more or less *momentary* existences, during the change from waking to sleep, or from sleep to waking.

Next, too, it became evident that there must even be equivalent states *beyond* sleep, or on the spiritual side of the scale,—a spiritual delirium and dreaming, in short, as well as an animate or soul's delirium and dreaming state.

Further, and especially with reference to the respective influences of the Concentrative and the Radiative, or the Soul and the Spirit, on the bodily state, whether in sleep or in waking; or as a resultant from the alternative and reversed operation of both; it soon became manifest that, in the *diurnal pendulation of life* between its two states of waking and sleep, the radiative influence of mere sleep could not be a *complete* or *sufficient* counteractive *and* REST to the concentrative influence of the ordinary waking state; and that Rad. 3—Con. 1 *alone* could be an adequate and proper, full, entire, and perfect reversal, counteractive, equivalent, restorative, and REST, to such a state as that of Con. 3—Rad. 1, or the ordinary waking state. In other words, it became evident that spirit-waking was the only true and perfect "rest" and "reversal" of the soul-waking state; and that so long as mankind oscillated or pendulated, alternately, between soul-waking *and sleep*, they could not be either perfected or fully developed or evolved, in their designed, created, nature; or be fulfilling the great law of their manifestly twofold or hermaphroditic species of existence. Sleep, in short, and its wide margins of dreaming and delirious confusion both of soul and spirit, plainly constituted a vast and *obstructive waste* of wild misrule which *must have no place in matured or fully developed humanity*, or cannot exist in man's perfected twofold nature, human and divine.

On well considering the symbolical diagram, fig. 2, as a "tree of life," with Radiative "Branch" and Concentrative "Root;"* the central or superlative—contemplative, creditive, volitive†—soul appeared to be "the way,"—the "straitened" or "the strait and narrow way, that leadeth to life,"—Spiritual and eternal or nontemporal; or the concentrative, fixed, and rigid "living stone" or "rock," as it were, whence "the living water" of "the Spirit" flowed in upon the soul: and, ultimately, I came to perceive that this superlative and *fixitive, contemplative* soul, and central source of identity, and faith, and moral will power, was not only the grand agent recognised by the Gentiles in general, and by Christian and other mystics as well, to this very end; but that this centre of every soul was, indeed, "the Head of every man," which Head is "Christ *in us*, the *Hope* of *Glory*;" as "the Head of Christ is God," the Lord, the Holy Spirit (for "the Lord is that Spirit") whose Temple the Body is, and Christ its Keystone, or its "Headstone of the corner."

Fénélon, Coleridge, and others, in maintaining that Christ is the Unitive power in the human Soul, were almost precisely of this same opinion;

* The words "Root" and "Branch" are here quoted with reference to the Scriptural "Root out of a dry ground" (Isa. liii. 2) and "Branch of the Lord" (Isa. iv. 2) the "Glorious Branch," both of them of "the tree of life," or "trees of Righteousness," which, in their twofold nature, fully developed, shall "take root downwards [in Earth], and bear fruit upwards [in Heaven]," thus *inheriting*, in *one* twofold nature, human and divine, both "the life that now is *and* that which is to come."

† For doctrinal reasons I would wish to include in the word indicating will-power a meaning or sense of flight, as well as of fixed will.

although they could not see clearly *whither* such a doctrine tended, or ought to lead them; or what was the great and transcendental function, or office, in the Soul, of that Unitive or Identitive power with which they doctrinally dealt.

The Buddhists, in describing "Om" as "the bent bow of the soul" which plunges it, like an arrow, into the divine abyss of Nirvana or ecstatic and divine entrancement, hold the very same doctrine; which, however, they probably do not now understand. So did the ancient Egyptians, Greeks, &c., in the form of the Messenger-God and Soul-translater, Mercury, with his "entrancing rod," whereby he "translated souls to the Gods, and returned them thence."

> Pray the Bridegroom in your Soul in virility to rise;—
> Of Bliss the fix'd Desire agonistic;—
> The Heavenly Bride within you to embrace as the prize
> Of the veil lifting, sleep-piercing, mystic.

Physiologists tell us that the very forces—concentrative forces in fact—which, by adding composite particle to composite particle, build up the body, or *concrete*, construct, or rear it to maturity,—next go on to *consolidate* the frame; and finally *constrict*, and ossify, and wither it away. The inevitable progress of life from infancy to old age, under the uncounteracted, or the *only partially counteracted*, influence of the concentrative forces of the soul, then, can only be perfectly or fully counteracted, so as ever to replace it *in statu quo*, by *equivalent* Radiative or dissolving forces, such as those of the Radiative or Spirit life, now dormant, when it shall be fully manifested or called forth, resurrected, awakened, or exalted, from its state of dormancy, humiliation, or death, in the depths of the Spirit—the false Spirit—of Slumber; and it is easy to see that as the inevitable progression of the Concentrative, or Soul, through its concretive, consolidative, and constrictive operations on the body, is a progression from infancy onwards to old age; so the inevitable, but not one whit *more* wonderful *retro*gression of the Radiative, or Spirit, must actually be *from old age back towards infancy*; and thus in truth, of such as "little children" is "the kingdom of Heaven" within us. Sleep, in one view, is merely and simply the imperfect or not yet fully developed Radiative life; and hence *it does* nightly retrograde us, but only as it were half a step backward, for every full step taken forward, towards old age, in the waking Concentrative life, or state of ordinary waking; but the *awakened* Spirit-life is the only full, complete, and perfect Restorer, Redeemer, Deliverer, or Ransom from the bondage of otherwise inevitable death, corruption, and the grave; and "the Living Water" of the only true "Fountain of perpetual Youth" and rejuvenescence; so that "a just balance" between Soul and Spirit—between "this life" and "the next," or "the life *to* COME," with "judgment laid to the line and righteousness to the plummet,"—but without being "righteous overmuch," even "in the Lord" who "is our righteousness,"—is all that is necessary to "the adoption, to wit the redemption of the body," or its "deliverance from the bondage of corruption into the glorious liberty of the children of God;" and that is the "salvation" of the body by "the Saviour of the body," and of the Soul in the body by the ray-crowning Saviour of the Soul; so long as this great law of our creation and redemption, as "holy temples" of "the Lord for the body," is upheld; and our "Soul is bound in the bundle of life together with the Lord our God," and guarded against death and corruption, the grave and all evil, by the Guardian Angel of the Lord the Irradiater within us.

I fear, Mr. Editor, that I have already more than exhausted not only your space but your patience; and now, although there was much more that I wished to have said, and especially in further allusion to the connexion of symbolism with the principles just indicated, I cannot intrude much further on your limited space; but, having handed over to the more reflective portion of your readers this psychological key to many symbolical and other religious mysteries, must leave such readers to judge for themselves as to its merits, curt and imperfect as it here after all is; requesting them, however, in the first place, if possible, to reperuse what I have already said, in the *Builder*, on such subjects; now guided, as they would themselves be, by the sciential and *de*mysticizing light of the explanative principles here presented.

And finally, should any one suppose that in these letters I have given a deeper or more extraordinary meaning to the mysteries or secrets and symbols of Freemasonry than Freemasons themselves give, or are at all aware of; I must remind him that the more highly initiated Freemasons do themselves identify the most profound mysteries of ancient religion and philosophy with their own;—mysteries which I am confident that the psychological key, applied, from time to time, in the *Builder*, to the locks and wards of these and other ancient repositories, have enabled me satisfactorily to open up and demysticize. Moreover, that some Freemasons, at all events, do regard their secrets with deep veneration, as involving the elements of a strange revelation of profound mysteries, revolutionarily affecting human life and its farther development, natural and spiritual, towards a state of perfection, cannot for a moment be doubted. Thus, for instance, a writer in *Fraser's Magazine* for November, 1833, who is evidently himself a highly-initiated Freemason, expresses his belief,—in a curious paper on "The Arcana of Freemasonry,"—that by Freemasonry man is yet to be "*regenerated* into healthfulness, and the grief-worn earth *reparadised*;" there being "a magnificent economy of Providence for the gradual *perfectionizing* of all lapsed intelligences;" for "the *building up* of the lapsed soul for *immortality*." There are, he continues, "glimmerings of a brighter dawning emanent over all the horizon; and the hearts of young enthusiasts pant fervently and fast for the vision of *the God of* DAY: but they forget that these glimmerings are the aurorae of *the awfullest metamorphosis in nature*; and that the expected God of Day is the God of Consuming Fire, who cometh to judge the earth;"—so that the purposes of Freemasonry are here identified with the great Day of Judgment, or with the second coming of the Lord, the coming of the Kingdom of Heaven, or of the Millennial Day, when *the Day-star shall arise*, in merciful and beneficent judgment, upon men's hearts:* it is as if Freemasonry, casting behind it the merely *retrospective* phase of Christianity, possessed some secret and practical doctrine in regard to the *hastening* of the second coming of the Lord and Master "for the body," who is "the *Desire* of *all* nations,"—and in regard to the final accomplishment of the *prospective* phase not only of Christianity but of the religions of "all nations." He hints that "*to true* masons is entrusted the hazardous charge of piloting the vessel athwart the boiling whirlpools: they will save, if they can, earth's latest age from indecent strife and confusion." That Freemasonry has not already done what (nominal) Christianity also has failed as yet to do, must, I suppose, be understood to arise from the circumstance that "the fulness of time" has not yet arrived for the reparadisement of the earth. Nevertheless, *there is a way* for all living to "haste unto the coming of the Lord;" "entering boldly to the Holiest," through the veil, by the daily death,—"dead in the flesh, but quickened by the Spirit;" for "the Kingdom of Heaven *suffereth* violence; and the violent *take it* BY FORCE," as militant soldiers of the Cross, who wrestle with the Angel of the Lord for the blessing, or "fight the good fight of Faith," *headed* by Christ, "the Captain of Salvation." "Ask and it shall be given you: seek and ye shall find: knock and it shall be opened unto you."

JOHN E. DOVE.

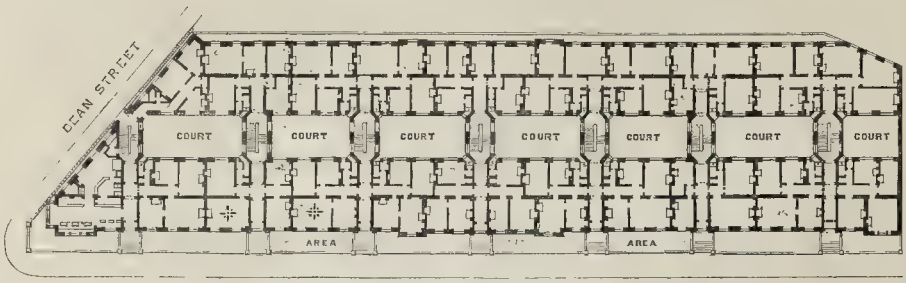
* "*The Day* of the Lord *cometh*, like a thief, *in the Night*." "A Day with the Lord *is as a thousand years, and as a* WATCH *in the* NIGHT." The great Day of the Lord then is in itself *a Millennium*: in fact it is a day not in time at all, but in eternity, the antithesis of time: and this, too, is the Great Day of Judgment. The Millennium—Lord's Day—Day of Judgment—Kingdom of Heaven—Second Advent—all are thus one,—a Day of holy Light into which night and darkness shall be turned.

A SANITARY STRIKE BY THE JUDGES.

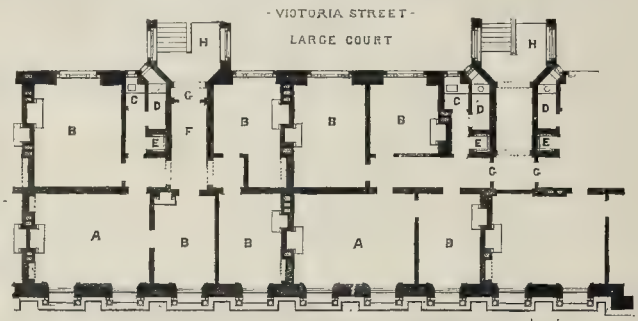
THE patience with which the judges, magistrates, counsel, reporters, and others who are obliged to be in long attendance in our courts of law, have borne the poisoning process which is daily going on in some of those ill-constructed interiors, is to be wondered at. There is, however, a limit to human endurance; and from time to time faint murmurings of complaint have come from the Bench, and have in some degree corroborated the accounts we have given of these places. So at length Lord Chief Baron Cockburn has spoken out very plainly respecting the state of the ventilation of the Court of Queen's Bench in the Guildhall. On Saturday last, his lordship, upon taking his seat, observed to Mr. Serjeant Shee, that he had just received a letter from Mr. Justice Mellor, informing him that he would be unable to sit in the second court again during those sittings, in consequence of being obliged to proceed on circuit. His lordship went on to say, that his brother Mellor had also added, that he could not conscientiously ask any of the other learned judges to sit in his place, inasmuch as during the summer months the court was so badly ventilated that it was positively injurious to health to sit there. Again, during the winter months, the heating apparatus was placed in such close proximity to the court as to render the atmosphere almost intolerable. Under these circumstances, the Lord Chief Justice said that the learned judges had unanimously resolved not to hold any sittings in the second court until some substantial alterations should be made. Now that the judges have struck there will no doubt be something effective done: and not only in the metropolitan, but also in the magisterial and higher courts of justice throughout the provinces a great deal of good might be effected, and comfort and health promoted, if the gentlemen who fill places on the bench were to direct attention to sanitary defects and use their powerful influence in promoting improvements. In the metropolis a reform in court ventilation and other arrangements might be usefully started at the Mansion House, which is at times dangerous to persons of delicate health. The lighting there is very deficient, and the entire system of the basement part and the rooms above requires to be thoroughly revised. At the Courts of Exchequer at the Guildhall there seems often to be a difficulty in getting a sufficient number of persons to form a jury; nor can we wonder at reasonable men rather submitting to be fined than to be present in a bad atmosphere for many hours during the dog-days.

MONUMENTAL.

A BUST of the late Sir George Cornewall Lewis is to be placed in Westminster Abbey. It is also intended to erect a more conspicuous monument to his memory in his native county of Radnor. The form and character of the monument will necessarily depend on the amount of the subscription; but it is determined that it is to be a suitable structure in the open air, and in the immediate neighbourhood of Sir George Lewis's residence at Harpton. Subscriptions are received at Messrs. Robarts & Lubbock's, and the honorary secretary is Mr. R. D. Green Price, of 20, Whitehall-place.



The Hampden monument at Chalgrove, erected in 1843, on the spot where Hampden, in 1643, received "the wound from which he died," has for years exhibited signs of decay, and was fast going to ruin. It has just been thoroughly repaired, however, and much improved in appearance by an addition of nearly 12 feet to its height. The obelisk may now therefore be seen at a much greater distance than before. The improvements have been made at the joint expense of Mr. G. Hampden Cameron, who now holds the Hampden estates, in Bucks, as lineal descendant; and Sir Henry Austen, who, in the female line, is sixth in direct descent from the great patriot. Captain Austen, of Brightwell Park, one of his sons, has had the care of the restoration, and the improved design submitted by him has been carried out.



A monument has recently been erected in Leicester Cemetery to the memory of the late Mr. John Flower, of Southfields, artist. It is of Ketton stone, and Early English in character. It consists of three deeply sunk panels, divided, and bordered by clustered circular shafts, surmounted by carved capitals, after a model from York Minster, with deep sunk moulded jambs and Pointed arches above; the latter being carved with a running four-leaved ornament. The whole is supported by a moulded Matlock Moor stone base, the grave being surmounted by a moulded stone kerb supporting a ledger of white Mansfield stone. The design was by Mr. Goddard, jun., of Leicester, architect. The carvings were executed by Mr. John Barratt. While the inscription placed in the centre panel is modestly receding in simple lead-coloured paint, being barely legible at a short distance, the name of the mason stands very prominent in large black characters.

For the Oastler monument for Bradford, twelve designs were sent in, and the unanimous choice of the committee fell upon a design by Mr. Philip, of London, sculptor. The design is simple, and consists of a full-length figure of the late Mr. Oastler, with his right arm slightly extended, as if pleading the cause of the factory children, two of whom—a boy and a girl—are standing, with upturned gaze, on his left, while his left hand rests upon the shoulders of the boy. Mr. Philip has received a commission to produce a colossal statue in bronze after the model, the price of which will be 1,000*l*. The size will be 10 feet, and it will be placed upon a pedestal of 11 feet in height, the additional cost of which will be 200*l*.

ENLARGED PLAN OF TWO SUITES OF CHAMBERS AT

WESTMINSTER CHAMBERS.

AMONG the numerous buildings of magnitude which are everywhere rising into notice in London is the structure called the Westminster Chambers, at the south-east corner of Victoria-street. We give a ground-plan, and a view of it as seen from the Broad Sanctuary, near Westminster Hospital. It occupies the frontage to Victoria-street, immediately opposite the Westminster Palace Hotel, and with it will form a striking entrance to this great street, and redeem it from the waste and desolate character which it has presented for so many years. Already a strong impetus has been given to building along its frontages by the formation of the Victoria Station, connected as that station is with the system of four of the great railway companies.

The Westminster Chambers have a frontage to Victoria-street of 450 feet (or about half the length of the new Houses of Parliament), and extend back to Orchard-street, now about to be widened and improved by the Westminster Improvement Commissioners: the building also fronts on Dean-street; and the site thus having thoroughfares on nearly all sides, and being above two acres in extent, affords facilities for light and air to the offices and residential chambers which the building is to contain.

The demand for offices for Parliamentary solicitors, agents, professional men, and others engaged in or connected with the business of Parliament and the Courts of Law at Westminster, has of late years been far beyond the limited accommodation that could be found in existing houses; and rents have been increasing in Westminster for such accommodation to a great extent, while the nature of the accommodation has been very inconvenient from the unsuitability of rooms originally intended for domestic accommodation being applied to the purposes of professional offices. In addition to this, the improvements and clearances which have occurred, and are likely to continue to occur for some years, in Westminster, in connexion with the Westminster Bridge approaches, Thames Embankment, new Government Offices, &c., have reduced the already scanty office accommodation still further.

To remedy this state of things an association was formed under the Joint Stock Companies Act, with limited liability, with the name of "The Mutual Tontine Association," one of the objects of which was to introduce the tontine principle in connexion with a solid investment, by the purchase of the freehold of the ground in question, and the erection thereon of a substantial building, handsomely, but not extravagantly treated architecturally, and arranged with care, so as to give the most convenient office accommodation, with separate access to each suite of offices, good light and ventilation, fireproof staircases and passages, lifts, washing-closets, and W.Cs. to every set of chambers; while, at the same time, the plans were to be so arranged as to readily permit one, two, or more suites, or even the whole building, to be thrown together and made one; and it was felt that no more certain or safe investment could easily be obtained, and that a high rate of interest might be anticipated.

The shareholders have the option of subscribing to the undertaking in the way of *ordinary shares* bearing a dividend in proportion to the net profits in the usual way, or on the *tontine principle*, by which subscribers of similar, or nearly similar age, are arranged in classes, and a rateable proportion of the net profits is allotted to each class. As any of the class die off, the income of the survivors, therefore, steadily increases; and it has been arranged that when any class is reduced to one-tenth of its original numbers, the property belonging to that class is to be then absolutely divided among and vested in such remaining one-tenth.

The building, which is now rapidly rising, will contain about 530 rooms, disposed on the basement, ground, first, second, third, and fourth floors. It will consist of two parallel ranges of building, each about 430 feet in length, and 39 feet in depth, separated by court-yards about 50 feet by 22 feet, access to the whole being obtained by seven stone staircases of easy gradients and from seven arched entrances from Victoria-street. Each suite of rooms will be approached from a separate entrance-door on the landings of these staircases, and will consist (as the enlarged plan shows) of four or five rooms, as the case may be, with a few sets of two rooms each. There are 120 of these suites in the entire building. Party walls separate the building into fourteen compartments; making, as it were, fourteen separate self-contained houses; and thus, in case of fire, limiting the damage to the division or compartment in which it might occur, and diminishing thereby the expenses of insurance.

The contract for the entire works has been taken by the well-known contractors, Messrs. Lucas, Brothers, for 130,000*l.*; while the purchase of the freehold, Parliamentary and other necessary expenses, will probably require a total sum of about 200,000*l.* Four-fifths of this have been already subscribed. It is expected that the remainder will be taken up before the building is opened.

The scale of rents of the chambers is said to be only slightly higher than those now paid in Westminster for very inferior accommodation, and about 25 per cent. lower than those obtained in Gresham House, City, which is, to some extent, a similar sort of building. Already numerous applications for chambers are being made to the directors.

Messrs. Lucas undertake to complete and deliver over the building to the directors by or before Michaelmas, 1864. The architects to the Association are Messrs. Banks & Barry, of Sackville-street.

WOOD CARVING.

SOCIETY OF ARTS.

WE are glad to hear that the council of the Society of Arts have agreed (on the representations of the Society of Wood Carvers), to institute next year another competitive exhibition of wood carvings with medal and money prizes. This early notice will afford workmen a better chance of showing what they can really do than they have on the present occasion. Endeavours are to be made also to bring together a good collection of wood carvings of different periods to afford modern workers the means of comparison.

At the first meeting of the present council since their election, Mr. William Hawes, vice-president, was elected chairman for the current year. With reference to the offered prizes to art-workmen for art-workmanship, to which we have before referred, we would remind those who propose to be competitors that they should make known their intention before the 15th of July, and as much earlier as possible. This information is necessary to enable the council to make suitable arrangements for the distribution of the awards.

VIEW OF THE WESTMINSTER CHAMBERS LOOKING WEST

ARCHÆOLOGY IN THE NORTH.

WE have before us two new publications touching architecture and archæology in the north.* The first of these is a volume containing the transactions of the New Architectural and Archæological Society of Durham and Northumberland, in the past year. The meetings of the Society were held at Darlington, at Hexham, and Bishop Auckland. At Darlington there were three papers read, the most curious of which was by Mr. Longstaffe. It consisted of documentary evidence concerning the buildings erected by Bishop Pudsey in the twelfth century. In his search among old writings, Mr. Longstaffe discovered mention of the name of the architect employed by this prelate to build Norham Castle. He was a laymau called Richard the Engineer (*ingeniator*). On the completion of these works (*castellaria*), he returned to Durham, where he lived in great repute among his fellow citizens. Another architect employed by the same prelate, probably after Richard's death, was William the Engineer, whose name appears on the pipe roll of 1197. In the "Boldon Buke" there is mention of two other persons connected with the building arts, Christian, *cementarius*, and Lambert, a marble-cutter. Reginald, the Durham monk, to whose records northern antiquaries are so much beholden, writes of an accident to a workman employed in building a chapel in Durham cathedral, which is, probably, the earliest report of a building casualty that we have. The man in question was employed in carrying up stones to the top of a lofty wall: in the midst of this occupation a large stone fell upon him and hurt him severely: for months he was prostrate, and for a year and a half went about Durham upon crutches. At the end of this long convalescence, interweaves the monk, true to his cloth, he was miraculously cured by St. Godric. The works imputed to Bishop Pudsey, besides Norham Castle, are improvements in Durham Castle, a new wall from the north gate to the south one, the gateway, the decorations of the north and south doorways, the cathedral, the erection of the Galilee, the commencement of the cloister, the erection of the hospital at Sherbourne, the construction of the church at Grindon, the building of a bridge at Elvete, with (on the authority of Davies) two chapels upon it; the church of St. Cuthbert, Darlington, and renovations of episcopal houses wherever they were required. The Society have testified their grateful appreciation of the vigorous aid extended to architecture by this prelate by a circular woodcut on the cover of their volume, showing him in consultation with William the Engineer in a cloister. Around the cut runs the legend, "I will build as in the days of old." The second paper is a digest of the remarks of Mr. Scott on St. Cuthbert's Church, Darlington, made on the occasion of the Society's visit there. This gentleman also alluded to the early architects; more especially bestowing encomiums upon William the Englishman, who, he believed, was the first to introduce the round capital. A paper on Hexham Abbey Church endorses our strictures upon the spoliations made there under the name of restorations. The concluding paper gives a history of Auckland Castle, and its long line of resident bishops, from the days of Hugh Pudsey, the magnificent bishop whose works we have just enumerated, to the days of Wyatt, whom the author, Mr. W. S. Gibson, calls "the prince of sham and stucco." The "Boldon Buke," in its mention of the services rendered to the early bishops by their tenants, gives a word-painting of the manners and customs of the times. The oxen of the tenants ploughed the episcopal land, carted the episcopal wine, and carried the episcopal wood: their husbandmen sowed the bishop's seed, made his hay, reaped his crops, brought him eggs and poultry; and the miller ground his corn. As a set-off to this list of favours received, the bishops were called upon to exercise a regal hospitality. King John paid two visits to Auckland Castle: Edward III. was entertained there by Bishop Bury; and John of Gaunt, Duke of Lancaster, caused Bishop Fordham considerable expenditure, as his roll, showing payments for wine and wax for candles, shows to those curious in such matters. A plan accompanies this paper, indicating that the ancient strongholds of the early bishops was surrounded by a wall fortified with towers, in precisely the same mode as the castles of the nobles. There are illustrations, too, of the rich ornamental works attributed to the architects of Bishop Pudsey; and plans showing the alterations at Hexham. The contents of the volume, generally, will be deemed acceptable contributions to our stores of archæological lore.

The *Border Magazine* is offered, the preface says, as the current medium of reciprocal communications to the antiquary, naturalist, and literary aspirant, whether resident on the English or on the Scottish border. The opening paper is a monograph upon Warkcastle,—an edifice built at Carham, on the Tweed, by Walter D'Espec; but being, like the French palace, the Louvre, spoken of at first among the people as "the work," has retained that name, provincialised to "wark." It was frequently reduced by the Scots; and all that is now to be seen to mark the site on which it stood, is a huge mound of ruin covered with green turf. A second paper, by G. Tate, F.G.S., tells of St. Cuthbert's beads,—a natural curiosity found on the shore in the neighbourhood of Lindisfarne Priory. An interesting account of Hawick Cross follows. Near the centre of the weighhouse, under the town-hall, is a circular piece of pavement, about 4 feet in diameter, marked with a St. Andrew's Cross. This indicates the site of the ancient Market Cross, of which there was no other local remembrance. In 1860 the plinth was recovered. The oldest inhabitants identified it as the stone to which offenders were fastened by staple and ring in the days of the pillory, and to which, also, bulls were tied when *bated*. (We spell this word with another vowel south of the Tweed.) When a pillory of the platform-cage kind was provided by the town council, the old one was presented to a tanner, who used it for many years for the purposes of his trade, but at last allowed it to get submerged in water. This stone had thus fulfilled a varied career of usefulness; at first a plinth of the market cross; then, turned upside down, the base of a pillory; and, lastly, an implement of trade. There are entries in the burgh records relating to the cross. The first, dated 1638, concerned a woman who was charged with stealing peat. She pleaded Guilty; whereupon she was ordered "to lie 48 hours in the stockes, and yrafter to come to the mercat crosse of Hawick upon the mercat-day, and to stand thereupon with the peittis upon her shoulder, with one paper upon her breaste or forehead declaring the fault." In May, 1715, there is an entry to show that the council agreed "that the common mercat-crosse with its appendages, be helped, mended, and repaired at the expense of the burgh;" and another to prove that further repairs were made in 1724, "given ye masons for lead and aile, when they mended ye crosse, 15s." Curiously, the recovered stone authenticates these expenditures. There are five holes upon it, showing where iron stays were inserted. In a paper on Ednam, the birthplace of the Poet of the Seasons, a few new facts are brought forward. An old volume, bound in parchment, containing several entries relating to the Thomson family, was found built up in a recess in one of the walls of the manse in which his father resided as incumbent of the parish. This documentary evidence shows that the biographers of the poet have known but very little about him. The new materials for a life of Thomson are these:—The Rev. Thomas Thomson's incumbency of the parish of Ednam lasted from July, 1692, to November, 1700; and in 1693 he married Beatrix Trotter, of Kelso. Four out of his nine children were born at Ednam. James, the poet, was baptized September 15th, 1700; and was born, not at the manse, but at a small cottage close by to which the family had temporarily removed during the progress of some necessary repairs. This cottage is now used as a sort of "out-house convenience" by a farmer. There are also notes on birds and border flowers; and Mr. Jeffreys brings up the rear with a notice of the "British period" in which he represents the aboriginal inhabitants of our island home as possessing a wider knowledge of the arts than is generally attributed to them. He even hints that they accustomed themselves to an indigestible luxury known in the nineteenth century (on this side of the Tweed) as hot rolls. Mr. Jeffrey says:—"In this country the baking of bread was left to the women. It was baked on stones called gredíols or gredles. From the name of the oven, *odyn*, being British, it is thought there were public bake-houses in each village, and that it is probable the ancient Britons followed the example set them by the Romans, and had *warm rolls to their breakfast*." There are plenty of local idioms like this to be found scattered among the pages of this maiden number: nor would we wish them expunged. The *Border Magazine* will be fraught with all the more memories of home to the Borderers who may read it on distant shores; and to ordinary readers it will be all the more indicative of the peculiarities of the romantic Border land.

* Transactions of the Architectural and Archæological Society of Durham and Northumberland. Joseph Masters, Aldersgate-street, and New Bond-street, London. Jan. 1863.

The Border Magazine. Edinburgh: William P. Nimmo. London: Simpkin, Marshall, & Co. July, 1863.

THE HEREFORD CATHEDRAL RESTORATIONS.

THE re-opening of Hereford Cathedral took place last week.

The work done since 1857, under the superintendence of Mr. Scott, comprises many improvements. First, there were the taking out and rebuilding of the entire jamb and walling of one side of the west window of the north transept. The whole of the tracery and mullions of these windows were taken out, repaired, and refixed. The remains of the groining shafts which had been destroyed were cut out, and new stones inserted. The bases of the pillars and the seats around the transept had been so mutilated as to necessitate their entire renewal. The walls, also, where decayed, were repaired by cutting out and inserting new stones. The monuments in this part have been restored as far as the Chapter's means will allow. The greater portion of one bay of the vaulting was taken out and refixed in cement. The floors throughout have been laid with Godwin's encaustic and enamelled tiles, laid to various designs, intermixed with coloured stone bands.

The whole of the external buttress caps were removed from the north transept, its eastern aisle, the north-east transept, the choir, and the Ladye Chapel, and in each case the original form was restored. The embattled gable coping of the north transept and an erection intended for a cross were removed, and new coping and a cross of a fit design were erected instead. The stairs, too, were surmounted with a spiral top as of old, which gave the whole transept its proper proportions.

The windows on the north and west sides were restored, as were also the different buttresses, and other weatherings, string courses, bases, and plinths.

The three windows of the room over the eastern aisle of the north transept, used as a library, have been restored.

The foundations of this portion of the transept were in a wretched condition, and the whole wall was gradually giving way. The old foundation was taken out and a new one inserted. The parapet of the choir, which had been raised by Wyatt, was lowered 3 feet to its original position. To execute this the roof of the choir had to be reformed and entirely releaded. In the windows, parapets, buttresses, weatherings, strings, plinths, and bases of the whole east transept, decayed or defaced stones were taken out and new stones were inserted instead.

The porch leading to the crypt on the north side of the Ladye Chapel, has been rebuilt, and the whole arcading of the north and south sides of the Ladye Chapel has been removed.

The little chapel, built by Bishop Audley, about 1475, has been entirely rebuilt,—at least, as regards the exterior.

The eastern windows of the south-east transept have had all the old mullions and tracery taken out and reset, with the addition of several new pieces of tracery and mullions. Entire new foundations were built to this transept at a great depth, by means of underpinning, and the buttresses and plinths were taken down and rebuilt.

The roof of this transept as well as the roof of the south aisle of the choir was strengthened with the addition of a large quantity of new oak, and iron work, the whole afterwards covered with new boardings and lead. The ancient portion of the roof of the Vicar's Cloister has been destroyed, giving place to a flat plastered ceiling. This has been removed, and the old roof again restored.

The woodwork of the windows of the building used for the present as a chapter-room has been removed, and the stone jambs and arches have been restored to their ancient form. The brick wall in the interior, as well as the wood floor (which was raised 3 feet above the original level), has also been removed, and the whole restored to its ancient form. The roofs of the western or Bishop's Cloisters have been entirely renewed, and covered with lead. The sunk-panelled and embattled parapet, with the crocketed pinnacles of each buttress, had been totally destroyed. These have been entirely rebuilt from an old fragment. The centre tower of the cloister over the entrance to the ancient chapter-house was taken down and re-constructed.

At the north side of the cathedral the Booth Porch has been restored, as also the Stanbury Chapel.

The foundations of the whole fabric have been thoroughly repaired, and underpinned where that was necessary.

Mr. Ruddle, of Peterborough, is the contractor for the fitting up of the choir-stalls and other joiner's work; Mr. Thompson, of the same place, for the mason and marble work; and all the tiles are from Mr. Godwin, of Lugwardine.

In the interior, the various monuments have been replaced. The models of seven electro-statues were executed for the cathedral by Mr. R. L. Boulton, of Worcester, sculptor. The altar screen was executed by his brother and him, under the late Mr. Cottingham, architect.

The ceiling of the north transept has been decorated by Mr. Hudson, the decorator of Salisbury Chapter-house and Chester Cathedral.

The choir-screen and corona are the prominent features of the interior view. The screen (or gateway to the choir) is placed under the eastern arch of the tower, and is a work rich in colour and decoration. The screen (which is by Skidmore, of Coventry, and was fully described in our pages), will be remembered by every visitor to the International Exhibition. It consists of an arcade of five main arches, each of them being divided to form two sub-arches: the central arch is of both larger and loftier proportions than the others, and above it rises a lofty pedimental canopy. Iron is the principal constructive material, copper and brass taking the principal parts in the more strictly decorative construction. There is yet much which is needed in order to make the restoration really complete.

We quote the following from the "Statement of the Restoration Fund":—

WORKS COMPLETED.

1858, May, to 1861, December 14th.

To payments to Mr. John Thompson, contractor for the following works, viz.:—

	£. s. d.	£. s. d.
First contract for interior and exterior works	7,464 10 0	
Second contract for ditto	2,094 12 0	
Sundry lead work and day account on the above works	116 10 3	
Third contract for works to roof of choir, turrets, north transept, south transept, and Stanbury chapel	937 11 8	
Sundry additional works to interior and exterior, including north porch as per estimate	918 0 8	
Restoration of monuments, crypt steps, pinnacles, and part of stonework to flooring, &c.	913 9 6	
		12,484 14 1
To Mr. O. Hudson, for decorating ceiling of north transept		189 0 0
To payment to architect and clerk of the works, on account, up to November, 1861		1,291 2 9
To cost of obtaining Act of Parliament for raising 13,000*l.* on mortgage of fabric estates		548 17 1
To costs of mortgages for 13,000*l.*		47 10 6
To costs of preparing contracts for works		15 19 1
		£14,567 3 6
Per contra.		
By amount raised on mortgage £13,000 0 0		
By amount provided by the Dean and Chapter out of surplus income of fabric estate	1,567 3 6	
		14,567 3 6

WORKS COMMENCED AND IN PROGRESS.

Floors of Ladye Chapel, eastern transepts, south transept, vestibules, under tower, chapter-house, south aisle of choir, portion of north transept, north aisle of choir, chapels, and of choir, including steps and base of screen, laying and fixing gas fittings, &c.	2,464 0 0	
Woodwork to choir stalls, new oak floor, and fittings, including carving	2,220 0 0	
Gas standards, coronas, and interior pipes and mains	993 8 0	
Exterior gas mains and meters	150 0 0	
Sundry works, including rain-water pipes, iron gates to cloisters, and sundries	200 0 0	
Choir screen, as per contract	1,500 0 0	
	£7,527 8 0	
Architect and clerk of works from November, 1861, until completion, say	685 0 0	
	£8,212 8 0	
Deficit	£562 14 3	

Unless liberal contributions are forthcoming, some of the works essential to a complete and effective restoration must be omitted altogether, or only carried out incompletely; and the Dean and Chapter make an urgent appeal to the public.

ARCHITECTURAL ALLIANCE.

AT the meeting held on the 2nd, as briefly mentioned in our last, delegates attended from the London Architectural Association, Architectural Institute of Scotland, the Bristol Society of Architects, the Birmingham Architectural Society, the Manchester Architectural Association, and the Northern Architectural Association.

Mr. C. Underwood took the chair; and, after some formal business, the hon. secretary, Mr. Pritchett, read a report rehearsing proceedings to which reference has been already made in our pages.

The meeting then proceeded to prepare a scale of charges which, when completed, is to be sent to the various allied societies, with the request that they will consider the same, and return it, with any alterations they propose, to the secretary. The scales published by the Institute and by the Northern Architectural Association, were taken as the basis.

On the motion of Mr. Austin, seconded by Mr. Roger Smith, it was resolved that the subject of competitions be brought before the allied societies by their delegates.

On the motion of Mr. Bunker, seconded by Mr. Rickman, it was resolved "that the delegates lay before their respective societies the question as to the desirability of establishing a uniform system of measuring artificers' work, and do bring to the next meeting such information as may be accessible."

The ballot for the officers of the ensuing year then took place, when the following were elected:—President, Mr. Roger Smith; vice-president, Mr. Chamberlain; treasurer and secretary, Mr. S. P. Pritchett.

THE BUILDING TRADES.

MANY important works are in progress at the present time. Although the chief lines of railway have been completed, there are still in course of construction branches and extensions which give employment to a large army of work-people: besides, there are the metropolitan lines, the Thames bridges and embankment, and the gigantic main drainage works. In the centre of the City an almost entire rebuilding is going forward: in places which are noticed by few wayfarers, important buildings are being raised, at an immense cost; such as the new banking premises of the Rothschilds. In the suburbs acres of ground are, in these summer months, being built upon; and in all directions spacious and substantial churches, chapels, and schools are being erected. Nor are these great operations confined to the metropolis, for in nearly all the chief towns a wonderful extension is going on.

The rapid growth of many English towns is marvellous. In 1668, when Pepys visited Bristol, it stood second to London in importance and population. It contained 29,000 inhabitants. At the same period the population of Leeds was about 7,000; of Sheffield, Birmingham, and Liverpool, about 4,000 each; and of Manchester about 6,000. Three of these towns have greatly outstripped Bristol; and yet, so far from having decreased, the latter town has quadrupled the number of its inhabitants. To provide for this increase of the population, thousands of persons engaged in the building trades are kept busy. Even more rapid than the increase of population is that of British commerce and manufactures; and this at present calls for the construction of warehouses, factories, and docks, which require a large amount of labour. There are also harbour and other public works in progress. These, then, should be prosperous times for masons, bricklayers, navigators, and many others. In evidence of this, it may be mentioned that at a recent meeting of the Metropolitan Board of Works, Mr. Carpmael asked how it was that the estimates of the main drainage had been so much exceeded by the cost? In reply, Mr. Bazalgette entered into a statement which showed that during the last few years materials have risen from 25 to 93 per cent., and labour from 30 to 40 per cent. He accounted for it by the great number of such large works, several of which he mentioned, being in progress at the same time; added to which, some of the main drainage works had to be driven through difficult ground, traversed by water.

Throughout the country sanitary improvements are absorbing a large amount of labour; for, in many places water-works, drainage, suburban cemeteries, &c., are in progress.

When reviewing the present activity, some ask what is to become of the thousands of workmen now employed when the great works in hand are completed, and fear that after the years of plenty there may come a time of scarcity in connexion with this kind of labour. We remember similar doubts when the great lines of railway were being made; but, notwithstanding that these works are finished, the demand for labour is greater than ever. Supposing that all now in progress are completed, there will be continued demands for this kind of work, for much remains to be done in both town and country. In Lancashire the great necessity for sanitary improvements has been shown. The pavement is deficient in long lines of streets. So rapid has been the growth of some towns that it has been impossible to find persons to complete the drainage and other matters necessary for health. We fear, however, that this neglect has been in some instances caused by carelessness on the part of the authorities, or is in consequence of the want of a sufficient supply of money for these purposes. In some towns large sums have been expended on improvements, which will save many lives and add to the health and comfort of the inhabitants: in others nothing has been done. There will come times of depression—the result of temporary and peculiar causes; but, as years roll on, the advanced condition of the country will require increased numbers of hands to execute public and private works.

OFFICE OF PUBLIC WORKS.

IN the Commons, on the 7th instant, Mr. B. Cochrane moved the following resolution:—"That the large sums annually voted for public buildings and improvements in the metropolis are not expended in a satisfactory manner; and that, with a view to the efficiency of the Office of Works, it should be constituted on a different basis." He urged that the House should pass a resolution indicating strongly their opinion with respect to the manner in which these works were conducted, and entered into much detail in support of his motion. The HON. W. Cowper said the Office of Works was in no way responsible for those works which his hon. friend had complained of, and which he appeared to attribute to the shortcomings of that office. After a review of Mr. Cochrane's speech, Mr. Cowper asked, Why was it that so many public offices had remained so long in abeyance? It was that there had been so many committees, the members of which had conflicting views, and every one was obstinate in upholding his own opinion. The arrangements of the Foreign Office had been hung up ever since 1839; and that delay was attributable to the fact that three committees had successively sat on the question. Four had sat on the National Gallery and two commissions; and as to the British Museum, he could not tell how many commissions and committees had been appointed. Even if it were possible, he thought there would be great hazard in turning the Office of Works into a Board not having any person in that House to represent it. He thought the better way would be to give more power to the Office of Works than it had at present, no matter who might hold the office of chief commissioner. The motion was rejected by a majority of 116 to 24.

CHURCH-BUILDING NEWS.

Partney (*Lincolnshire*).—The church of St. Nicholas, Partney, was re-opened, after extensive restoration, on June 25th, by the Bishop of the diocese. The works have been carried out by Mr. C. White, builder, Alford, under the direction of Mr. C. E. Giles, architect, London. Except the tower and chancel, it has been found necessary to rebuild the whole fabric. The only new features are the roofs, two windows in the north aisle, the porch, and the internal fittings. The new nave roof follows the line of the old weather mould on the tower which marked the height of the original roof. The old porch had hardly any remains of the original work, but the few there were have been made as far as possible the groundwork of style to the new porch.

Ipswich.—It has been decided to restore the church of Stoke, near Ipswich, and to build a new north transept in accordance with plans which have been prepared by Mr. R. M. Phipson. The total cost of the work will amount to between 1,100*l.* and 1,200*l.* The new north transept, together with the rebenching of the church, will, it is estimated, afford accommodation to from 80 to 100 additional persons. The west gallery is to be removed, and the tower arch opened. A new organ has been purchased, and will stand at this end, with an open screen before it; filling up, for about 8 feet in height, the aperture of the west arch. The benching will be open, and of a simple character. That for the chancel will be oak, and for the nave and new transept pine. The roof of the new transept will be precisely similar in detail to the old roof of the nave, and a moulded stone arch partly springing from corbels will connect it with the nave. The outside cement work will be cut away, and the old rubble walling restored. The porch it is proposed to case with hammered flint.

Great Waltham.—The church of Great Waltham has been restored and re-opened. Nearly the whole fabric has been restored. A new five-light east window, of a size corresponding with the building, has been inserted. Oak benches, with poppy-heads and carved panelled fronts, have been fixed. Externally considerable alteration has taken place in the appearance of the church, as the whole of the plastering has been stripped off, exposing the flint rubble work. The whole of the work has been carried out under the direction of Mr. F. Chancellor, architect, Chelmsford, by Mr. James Brown, of Bocking, builder; the wood carving having been executed by Mr. Polly, of Coggleshall.

Leighton Buzzard (Beds.).—There is a prospect of additional church accommodation being provided in this town, which is very much needed. Permission has been granted to erect a church and schools on a piece of ground at the north end of the town.

Exeter.—Silverton church, near Exeter, was re-opened after re-consecration, on June 27th. The works just completed from plans by Mr. Ashworth, architect, have been executed by Messrs. Moass & Sons, builders, Exeter. They consist in the rebuilding the chancel with enlargement; removing a classic reredos and transparency, some imitated drapery, and a gallery at the east end of the south aisle; also a post and rail screen of classic character, which surmounted some small mutilated remains of a perpendicular rood-screen, extending originally across the church. The whole area of the nave and aisles has been re-seated with red deal stained fittings, and there is a new flat formed, and covered with lead to the north aisle. Repairs have been made in the external stonework generally, and pinnacles and new windows supplied to the tower. The churchyard has been enlarged, and walls and gates built. The cost of the works is nearly 1,500*l.*

Mark (Somerset).—Progress has been made within the last month towards the restoration of the church at Mark. Most of the pews have been lowered, and the stone pillars and arches scraped.

Aberdare.—The principal stone of a new church for the especial accommodation of the Welsh population of Aberdare, has been laid. The church, of which a portion of the principal walls are already erected, will consist of nave, north and south aisles, chancel, and chancel aisles, and a vestry on the south side of the chancel, over which will be a gabled tower of the height of 70 feet. The extreme internal dimensions are—length, 97 feet; width, 51 feet 8 inches; providing accommodation for about 680 adult sittings. The columns of the church will be of iron. The cost of the building will be about 2 800*l.* The style will be Middle pointed, with bold details. The architect is Mr. A. W. Blomfield, of London; and the clerk of the work, Mr. G. M. Bates, from Stevenage, Herts. Mr. P. Rees, of Aberdare, is the contractor.

Llanystumdwy.—The new church of the rural village of Llanystumdwy, midway between Pwllheli and Portmadoc, has been opened by the Bishop of Bangor. The edifice is cruciform in plan, and has been rebuilt on the same site as the former, with the exception of the northern transept, which has now been added. The internal dimensions of the building, as now completed, are;—the nave, 57 feet 6 inches long, up to the steps outside the altar rails, and 31 feet 6 inches wide; the north and south transept, 14 feet 6 inches by 12 feet; the chancel, 18 feet 6 inches longitudinally, from the east wall to the edge of the steps outside the altar rails, by 15 feet wide. The general height of the building is 14 feet 6 inches to the eaves. The style is third pointed. The chancel is lighted by an arch-headed window, in three lights, with traceried head, the whole filled in with stained glass, by Messrs. T. Baillie & Co., of London, and the gift of Mrs. Howel Morgan, of Hengwrt-ucha. The window is in the Decorated style, and is divided into three lower or principal lights, and seven ornamented compartments. The tracery above is about 12½ feet in height, and 6 feet 6 inches in width. In the centre principal light is an illustration of Our Lord's Sermon on the Mount. In the dexter or north side is shown St. Paul preaching at Athens; and in the sinister or south side is St. Peter preaching, as described in the second chapter of Acts of the Apostles, wherein is stated that about 3,000 souls are converted. Each of these groups is in an elongated medallion shape, the remainder of the openings being occupied with mosaic design, in colours. Across the lower part of the window, under the groups, is a memorial legend, written in the Welsh language, in Lombardic characters. In the tracery lights are represented the Dove, the Pelican, the Cross, Holy Bible, and Cherubim. The church will accommodate about 300. The old seats have been stained and varnished, to match the new seats; and a platform raised at the west end for the singers. The cost of the whole of these works will, we are informed, be between 950*l.* and 1,000*l.*, a large portion of which the Rev. Henry Richards, the rector, has still to realize. The designs for the works were furnished by Messrs. Kennedy & Rogers, of Bangor and London, architects; and were carried into execution by Mr. Wm. Thomas, Menai Bridge, builder.

Long Compton (Warwickshire).—The village church here has been re-opened after renovation, at a cost of 2,000*l.*, raised by private subscription The nave has been renovated, a new floor has been laid down, and by new open seats the accommodation has been considerably increased. The chancel has been newly roofed, and paved with Minton's encaustic tiles, while a painted window has been executed by Messrs. Hardman. The architect was Mr. H. Woodyer; and the contractor, Mr. C. Denner.

Nottingham. — The foundation-stone of All Saints' Church has been laid. The expense of the erection of the edifice and its endowment is defrayed by Mr. William Windley, of Nottingham. The site selected is at the corner of Raleigh-street, on an elevated plot of ground overlooking the Arboretum. The church, which is from a design by Messrs. Hine & Evans, architects, will consist of a nave and apsidal chancel, with north and south aisle to both; a tower and spire at the west end, and north and south porches; the vestry and organ-chamber occupying the south aisle of chancel. The nave is 75 feet, by 25½ feet wide in the clear; the aisles 13 feet wide; the chancel 37½ feet by 21½ feet. The extreme length of the church without is 150 feet, and the width 63 feet. The height from floor to apex of nave to roof is 57 feet. The height of tower and spire to the summit of the cross will be upwards of 160 feet. The walls are to be wholly of stone; the inner face to be dressed, and the outer rock faced. The arches will be relieved by the introduction of red Alton stone, and those in the chancel will be enriched with alabaster and Devonshire marble. The roofs are to be open timberwork, and covered with Staffordshire tiles. The church will provide accommodation for 800, in open benches arranged on the ground-floor. The style is an approximation to the Early Decorated.

SCHOOL-BUILDING NEWS.

Glastonbury.—The foundation stone of the new St. John's schools has been laid. These schools are situate at the north side of St. John's church, and are to be built in the old Gothic Perpendicular style, in character with the church. They are to contain two school-rooms, one for boys and one for girls; each 58 feet long by 20 feet; two class-rooms, each 18 feet by 11 feet; play-grounds, and offices. The cost of them, together with the purchase of the land, is estimated to be about 1,500*l.*, of which Government has granted 500*l.* Mr. H. Danby Seymour, M.P., has contributed 100*l.* The schools are from the design of Mr. Scott, and they will be built under the superintendence of Mr. Merrick.

Elmley Lovett. — The new schools recently erected at Cutnal-green, in this parish, have been opened. The building consists of a room capable of accommodating 100 children of both sexes, with the usual out-offices attached. At the northern end is a residence for the master and mistress. The building is of red and black brick, and is covered with Broseley tiles of the same colour, worked in design. The total cost of the school and residence is estimated at about 750*l.* Mr. T. Baker, of Kidderminster, was the architect; and Mr. Fisher, of the same town, the builder.

Swinton (Yorkshire).—The first stone of a new school in connexion with St. Peter's church, Swinton, has been laid. The building will be of red brick, with bands of blue and white beading courses at intervals. The roofs will be flat pitched and hipped, covered with green and blue slates, and the monotony of outline will be relieved by the introduction of lunettes. The structure will be divided into boys' and girls' schools, each 50 feet by 30 feet, with two class-rooms 21 feet by 13 feet 6 inches, and separate porch entrances. Under the boys' school, rooms will be provided for heating apparatus, coals, and storage. The interior of the schools will be unplastered, and the roof-timbers, to the line of ceiling (20 feet from the floor), will be stained and varnished. The entire cost, including fences, gates, and fixtures, is estimated at 1,530*l.*, towards which about 1,150*l.* have been subscribed. The building is designed by, and its erection is under the management of, Messrs. Whyatt & Redford, Manchester; and the builder is Mr. D. Barlow, of Pendleton. The ground on which the schools will stand was given to the building committee by the late Earl of Ellesmere. The building will be used for teaching the children of St. Peter's church, in conjunction with the schools already in use.

ACCIDENTS.

MR. THOMAS WAKEFIELD MOON, of No. 4, Church-street, Kentish-town, while visiting the abbey of St. Alban's, fell from the tower upon the roof, 75 feet below, and was killed on the spot. From the evidence taken at the inquest it appears that the deceased was twenty-four years of age, and had only been married a few weeks. He, in company with his father and two elder brothers, had come down to St. Alban's from London in an open carriage. They were supplied with tickets to view the abbey. The three brothers had arrived at the top: they were not accompanied by the verger. The deceased attempted to sit down between the embrasures; but, being deceived as to the height and width of the wall, overbalanced himself and fell over.——An accident has occurred in London-street, Norwich, owing to the falling of a cornice about being erected on the top of some new houses, now building. It appears that the overhanging cornice had not been properly weighted and secured; and while a labourer was engaged on the upper platform of the scaffolding, the overhanging stonework of one of the houses gave way, carrying with it the scaffolding, and precipitating the man to the ground, portions of the *débris* falling upon him. The man, however, was not killed.——A painter has been killed by a fall while painting a staircase in a house in Waterloo-street, Hove, near Brighton. Deceased was standing upon some steps, which were partially resting on a board and partially against the wall. The board on which the steps were partially resting was placed at one end on a stair of the staircase, and on trestles at the other end. The trestles stood wide open on the landing. Whilst deceased was standing upon the steps the trestles gave way from him right into the back drawing-room door, which was open. He fell about 10 feet on to the wooden landing below, and in falling probably knocked his head against the architrave of the door. He had himself arranged the trestles and plank.

LIGHT AND AIR CASE.

ISENBERG *v.* THE EAST INDIA HOUSE ESTATE COMPANY.

THIS case arose out of the new buildings being erected on the site of the old East-India House, from the increased height of the new buildings thereby decreasing the light and air to the plaintiff's premises, in Lime-street. The case was argued before the Master of the Rolls, on the 24th of June last, and, after a long and patient investigation, the Master decided on a view of the premises, as that was considered a satisfactory course by all parties concerned. The Master of the Rolls appointed Saturday, the 27th of June, for this purpose. Meanwhile the defendants put up what was represented by them to be a model of the old premises. His Honour attended on the day named, in company with another gentleman, and viewed the *locus in quo*. Judgment was given on the following Monday, by the court granting an injunction in the terms of the plaintiff's bill, viz.—to remove the obstructions caused by the said new buildings being higher than the former India House; but execution would be stayed until the second week in Michaelmas term, to give time for the parties to make some arrangement. The Solicitor-General, Mr. Hawkins, Q.C., and Mr. Wicken, were counsel for the defendant. Mr. Selwyn, Q.C., and Mr. Dundas Gardiner, were counsel for the plaintiff.

CASES UNDER METROPOLITAN BUILDING ACT.

Wooden Buildings.—At the Clerkenwell Police-court, on the 30th ult., Daniel Marriage, of Ward's-place, Lower-road, Islington, was summoned by Mr. Godwin, the district surveyor of South Islington, for having erected a building contrary to the provisions of the Building Act: also for not giving proper notice to the district surveyor.

Mr. Layton, jun., of Islington, said that the defendant had erected a wooden building in the forecourt of his house. The building was enclosed, had a door hung on hinges, and the roof was of wood. The district surveyor gave notice to the defendant to pull down the building, as the

erection was not in accordance with the Building Act, which states that the building shall be constructed of incombustible materials. And this building being in the close confined neighbourhood of Ward's-place, Lower-road, a colony of costermongers, it was likely not only to be a nuisance by impeding light and air, but also, in case of fire, it might convey the flames from one side of the place to the other. The complainant had no wish to deal harshly with the defendant, but desired him to know that he was not to infringe the law; as, by allowing this building to pass by unnoticed, it would be a tacit consent to the erection of other buildings of a like character. A question might be raised as to whether this was a "building." There could be no doubt about it, and there were plenty of decisions upon that point.

The district surveyor having proved the statement,

The defendant said he was not aware that he had done wrong. It was not a building, for it was only a few pieces of wood nailed to some posts

Mr. Barker: It is quite clear you have done wrong; and if Mr. Layton asks for it, I shall fine you.

Mr. Layton: We do not ask for that. If he pulls it down in a fortnight it will do.

Mr. Barker: Very well. I will allow the summons to stand adjourned for a fortnight. In the meantime the defendant must pull down the structure. If it is not pulled down I shall inflict a heavy penalty. Buildings of this kind must be stopped; and it is only by the kindness of the district surveyor that you are saved a great deal of expense and the costs.

BLIND BUILDERS IN EXETER.

SIR,—Knowing that your widely circulated paper is at all times open for the advocacy of what is right, and the condemnation of that which is wrong, I send you another instance of how work is tendered for, and how builders jump at conclusions. In a recent competition for the erection of four cottages in this city, for Mr. Sclater, Mr. Cross, architect, the highest competitor was 1,114*l.*, and the lowest 576*l.*: surely there must be something radically wrong somewhere. SEMPER FIDELIS.

PATENTS CONNECTED WITH BUILDING.*

MACHINERY FOR MOULDING AND COMPRESSING ARTIFICIAL FUEL, PEAT, BRICKS, TILES, &c.—*R. A. Brooman.* A communication. Dated 3rd November, 1862.—Upon a bed the inventor erects a pillar for carrying the axis of an oscillating beam. To this beam, in front of the pillar, two pistons are connected, one at the end of the beam and the other near the pillar. One piston is used to compress and mould the substances in moulds carried on a revolving platform, and the other for driving the moulded or compressed substances out from the moulds. Where the shape of the moulds will not admit of the moulded articles being driven down through them, then he employs a piston from below to force them up through the moulds. This latter piston is made to move up and down by levers connected to the beam behind the pillar through a connecting rod. The revolving platform carries several moulds and is made to revolve to present the articles, first to the moulding piston, and then to the piston for driving out the moulded articles. Motion is communicated to the outer edge of the platform, which is toothed for the purpose, through a pawl and lever worked from the same prime-mover, which, through a connecting rod, drives the oscillating beam. The moulded articles are carried away upon an endless belt.

COMPRESSING OR DRESSING BRICKS AND TILES. *C. Hadfield* and *W. A. Atkins.* Dated 21st November, 1862.—This invention consists in the construction and employment of a revolving table or frame, upon or in which any convenient number of moulds, open at the top, and each fitted with rising bottom dies and pistons, are placed, fixed, formed, or fitted, and a rising and falling main piston, actuated by a crank, and also working radially into and out of each succeding travelling mould, passing respectively under the said piston as the table revolves. The revolving table and rising and falling pistons of the machine are actuated by a suitable gearing driven by a steam-engine or otherwise; and the bricks, tiles, clay, or other materials, having been thereby subjected to the required compressing forces, and having received the desired form, are lifted out of the moulds by the continued rising of the bottom piston along the circular incline, until it arrives at the highest point thereof, when the compressed articles are removed, and their place supplied by other materials.

MANUFACTURE OF TILES OR MOULDED BLOCKS. *J. Taylor, jun.* Dated 21st November, 1862.—In manufacturing moulded, bent, or angular tiles or lumps, each having two outer surfaces at right angles to each other, a die or moulding orifice is so formed that several of such bent or angular tiles or blocks shall be moulded together in one block, and so connected to each other that they may be dried and burned and transported to any distance before they are separated for use. And the construction of the die or moulding orifice is such that some of the bent tiles (which are all of the same section and dimensions), are within, while the others form the outside of the block. The die or moulding orifice is of a rectangular figure, and produces four bent tiles, one at each angle of the die, and two similar bent tiles on the inside of the mass, moulded or formed by expressing brick-earth or clay through the die.

IMPROVEMENTS IN TOPS, CAPS, AND WIND-GUARDS FOR CHIMNEYS, AND IN APPARATUS FOR CLEANING THE SAME. *S. Deacon* and *C. Deacon.* Dated 21st November, 1862.—This invention consists in constructing the covers of chimney-tops, caps, or windguards in such manner that the said covers shall open and close; that is to say, they shall be opened by the brush or ordinary cleaning instrument when it moves upward, so as to allow such brush or instrument to pass up through the top, and shall close or return to their previous position when the said brush or instrument is lowered or withdrawn. The invention next relates to an improved cleaning apparatus, the object of which is to clean the inside surfaces of the guards, shields, or plates fixed outside the openings or slots of windguards, chimneys, or caps.

APPARATUS FOR PREPARING CLAY FOR BRICK-MAKING, &c.—*G. Ransome.* Dated 25th November, 1862.—This invention consists in improved sieves and the mode of agitating them. The patentee takes an ordinary sieve of the rectangular form, and suspends it horizontally in a suitable framework by four leather straps, one at each corner, from beams above it; one end, however, being about three inches higher than the other. He then fixes into the bottom of it, about 6 inches apart, several slack thin iron chains of one-eighth inch iron, the ends of which are fastened to the opposite ends of the longer length of the sieve. These chains are to be about 2 inches in length longer than the sieve, so that when the sieve is in motion, the slack parts shake about among the clay under operation without coming in actual contact with each other. To the sieve so suspended and constructed he attaches a crank-shaft, descending perpendicularly upon it from above, the crank being at the lower end, and fitted into a socket inserted into a cross-bar extending from side to side over the centre of and firmly secured to the sieve. The shaft is made to revolve by any of the ordinary methods in general use; and when in motion, and charged either by hand or from a shoot above, the sieve is agitated in a circular horizontal manner, whereby the clay is sifted or screened, the fine being collected for use, and the rough or lumpy parts passing away as in ordinary methods.

MACHINERY FOR MAKING BRICKS.—*W. Longley.* Dated 25th November, 1862.—This invention cannot be described without reference to the drawings.

* Selected from the lists in the *Engineer*.

Books Received.

Results of an Experimental Inquiry into the Tensile Strength and other Properties of various Kinds of Wrought Iron and Steel. By DAVID KIRKALDY. Second edition. Glasgow: Printed and sold by the author, 4, Corunna-street. 1863.

So recently as the 4th of October last we had occasion to notice favourably the first edition of this work, and to give a series of the more important of the results arrived at, especially as regards steel, and also as to the modifications of fibrous and crystalline fracture, or the substitution of the one for the other, according to the slowness or rapidity of the breakage. The issue of a second edition of such a work so soon after its first issue affords the best comment on its value, and on the accuracy of our estimate of its merits, although the author, as we have before said, scarcely does justice to others.

VARIORUM.

No. 2 of "Art Life in the West of England" (a monthly magazine emanating from Bristol), contains some clever writing, and shows that there is an art-spirit awakening in the west. Let us hope it may take large views and show kindly sympathies. The present number contains the second portion of an interesting story, "Charles Overend's Portrait;" essays on "Architects and Architecture," "Ancient and Modern Towns;" some poetry, reviews, and so on. That the expression of the hope we have ventured to throw out above is not wholly unnecessary, a quotation may show. The writer of "Architects and Architecture" is speaking of "art quacks," who, having made the grand tour, "become self-constituted critics;" and he says,—

"S metimes they leave Egypt and the Archipelago, and in a fit of temporary insanity begin to talk of England and France, and then in a moment they are out of their depth. They 'do' the poetical showman to Sir Christopher Wren, and stir up, with the ladle of eloquence, all his wretched abortions, until they stink again in the nostrils of every true disciple of art. They write high flown language in honour of the Bank of England and the Royal Exchange, and are sometimes idiotic enough to praise the National Gallery; forgetting that the leaders of their own classical army have erased these examples from their banners, and substituted the club-houses of Pall-mall, with the names of Sansovino and Palladio for Phidias and Vitruvius. It is just *possible*, however, that they do *not* forget. It may be that they suppose the Carlton Club, the Reform Club, the British Museum, and the Royal Exchange, to be all one and the same style, just as they evidently do with regard to the various architectures which arose in Europe between the eleventh and sixteenth centuries.

On the other hand, when men neglecting the Chapter House at Westminster, or the Palace at Wells, become enraptured and enthusiastic about such buildings as King's College Chapel, Cambridge; Windsor Castle; Henry VII.'s Chapel; or the Houses of Parliament; or, in our own locality, such buildings as Thornbury Abbey, Bath Abbey, and the body of Redcliff church; we may be sure that whatever their literary attainments may be, whatever their classical learning or historical reading may amount to, they are dead to art, and blind to all its purpose; lacking the discriminating power to separate the corruption from the loveliness, or choose between the evil and the good.

For such—whether they are weak creatures attracted by the acres of repeated panelling which, in the aggregate, is styled the Houses of Parliament; or whether they are imbecile dreamers who, because they have seen a pediment and dome somewhere, love all pediments and domes thenceforward;—there is only one course; to sit patiently, humbly, and reverentially in the outer courts of architecture, inquiring diligently and watching earnestly; for there is nothing noble or good that can be learnt without humility, nothing gained without diligence and zeal."

We repeat the writer's words,—"There is nothing noble or good that can be learnt without humility." —— *The Gentleman's Magazine* for July (Parker, Strand) is of more than average interest. It contains, among other curious matter, a paper on the pre-Christian Cross, illustrated by a page of cruciform and other symbols, from Egypt, India, Assyria, Greece, Asia Minor, Etruria, Latium, Scandinavia, and Central America. Yet, strange to say, the author, Mr. H. M. Westropp, of Cork, attempts to show that all the heathen and pre-Christian cruciform symbols were virtually or really symbolical of—nothing in particular! or at the best were merely symbolical of symbols! Thus "in Persia and Assyria the cross is the abridged form of the ferocher, or emblem of the Deity, the outline of which gives the form of a cross." But how did it come to pass that the Persian and Assyrian emblem of the Deity *was* in the form of a cross? There is little depth in such a way of treating one of the most universal and ancient of all pre-Christian symbols: it reminds one of the Indian's idea that the earth stands on an elephant and the elephant on a tortoise; but what the tortoise stands upon was a question quite beyond the depth of the poor Hindoo. As to "the sign of the cross," as the author has it, used by the African, "the cross making the thing tabboo, private property of the party making it" [yes, and *sacred*, which is something more than mere "private property"], he thinks—

"This is only what any person ignorant of writing would do at the present day, when, called on to sign a paper, and to show that it is his act and deed, he gives his mark thus —

his
John + Smith,
mark.

Human nature is the same all over the world; and man under similar circumstances, must of necessity have recourse to similar expedients."

Doubtless, there is truth enough in all this; but is it because bishops are "ignorant of writing" that *they* put the very same mark before their official signatures? The cross and other geometrical symbols have been so largely treated of in the *Builder* of late, that we need not now go any further into this subject. The plate of symbols given in the *Gentleman's Magazine* contains many curious forms, such as various modifications of the St. Andrew's cross, and the double and cruciform N symbol, including a four-legged Isle-of-Man-looking one; the Ϯ and phallus in various forms; and two of the mirror-like symbols, with cruciform handles.——The *Popular Science Review* (quarterly) for July (Hardwicke, Piccadilly) is also an excellent number, and contains much matter of scientific interest, including papers on the Antiquity of Man; on Colour Blindness, with a coloured plate; a valuable Scientific Summary, &c.

STAINED GLASS FOR ST. PAUL'S.—Mr. Brown, who some time since retired from the firm of Messrs. Longman & Co., of Paternoster-row, has given 1,000*l.* for a stained-glass window in St. Paul's Cathedral.

Miscellanea.

GAS.—The prosperous condition of the Wisbech Gas Company, it is reported, has enabled the directors to increase the rate of dividend to the shareholders, and to lower the price of gas to 4s. 6d. per 1,000 cubic feet.——The Kelso Gas Company have declared a dividend of 10 per cent.

DESTRUCTION OF A THEATRE IN FLORENCE.—The Politrama Theatre has been accidentally burnt. A fold of drapery above the proscenium first took fire, about the time of opening, from a taper on a long pole carried by a workman for lighting the gas-burners. The fire burnt all night, and several lives were lost.

FALL OF CHRIST CHURCH TOWER, EAST SHEEN.—As justifying the observations we made at the time of this occurrence, and freeing the architect from blame, we gladly insert the following note addressed to Mr. Blomfield by the Rev. J. S. Manley, chairman of the Committee:—

"In reply to your letter, I have much pleasure in stating on behalf of the Building Committee, that while they do not think it desirable to publish in full the report of the surveyor as to the cause of the fall of the tower of Christ Church, East Sheen, in March last, they think it only due to you to state that in that report, the surveyor (Mr. Parson) has made the following reference to yourself as architect:—'I feel it right to add . . . . that the drawings and specifications are perfectly satisfactory and sufficient to ensure a perfectly sound and substantial fabric.' In this opinion I may add, the Committee altogether concur."

PROPOSED CENTRAL RAILWAY THROUGH EGYPT. An influential deputation has waited upon Earl Russell, at the Foreign Office, for the purpose of urging the support of Government to a proposed central railway through Egypt. The deputation was headed by Sir Herbert Maddock, late M.P. for Rochester, and President of the Council in India; Rear-Admiral Sir Edward Belcher, C.B.; and others. Mr. Oliveira, who introduced the deputation, said that the railway as proposed would leave Cairo, pass along the valley of the Nile to Kenneh (near ancient Thebes), thence due east to Cossier, on the coast of the Red Sea, and thence to Ras Benas (ancient Berenice), along the coast, where there is a large, commodious, and deep harbour—the whole distance being about 600 miles. Earl Russell said he understood the Pasha was averse to it, and would not like to spend his money on it. Mr. Walne said that it was not intended to ask the Pasha for any money. The requisite funds would readily be found in this country.

THE FUNDS OF THE CITY OF LONDON.—The *City Press* gives the following particulars:—The total produce in 1862 of rents reserved by leases within the city of London was 51,764*l.*; of premises within the counties of Middlesex and Surrey, 9,522*l.*; other rents, 39*l.*; the Finsbury estate, 54,764*l.* The proportion out of the last total deducted for property-tax and other rates and expenses is 2,758*l.*; and another deduction of one-sixth from the Finsbury rents is made for the Ecclesiastical Commissioners, amounting to 8,607*l.* These deductions reduce the total of the Finsbury estate rents to 43,338*l.*; and this, added to the rents just enumerated, gives a general title under this head of 104,693*l.*; Irish quit-rents produced 192*l.*, proportion of profits of an estate in Ireland (the name might have been added), 235*l.*; aqueducts, 80*l.*; fines for renewal of leases, 5,350*l.*; markets, including Leadenhall, 2,919*l.*; Newgate, 4,535*l.*; Farringdon, 896*l.*; Smithfield hay-market, 262*l.*; Billingsgate, 5,682*l.*; making in the whole 14,113*l.* The metage of corn produced 14,627*l.*; metage of fruit, 2,331*l.*; stamping weights, 102*l.*; water baillage, 479*l.* There is a curious entry of bequests, 135*l.*; proving that, though corporations have no souls, they have a share in some people's tender affections. Brokers' rents produced 4,733*l.*; justiciary fees, 1,109*l.*; reimbursements on account of prisons, 4,784*l.*; the like on account of criminal prosecutions, 1,526*l.*; officers' surplus fees, 7,287*l.*; sundries, 4,435*l.*: various dividends on moneys realized by sale of properties and invested in annuities amounted to 645*l.*: two small properties sold, in one case to the Braziers' Company, and in the other to Mr. Robert Brett, realized 1,006*l.* Lastly, there was a loan raised by application to the Bank of England, for the purpose of erecting a pauper lunatic asylum, amounting to 43,500*l.*, and a loan repaid from the Gresham Fund, in reimbursement of moneys advanced to pay interest on bonds, the reimbursement amounting to 5,472*l.* The whole charge of the controller against the chamberlain amounted to 216,844*l.* 13*s.* 0½*d.* In enumerating the various items we have omitted odd shillings and pence, so that if the reader casts up our totals the result will be somewhat less than the actual total now just cited.

INAUGURATION OF THE HERBERT STATUE AT SALISBURY.—The statue of Lord Herbert of Lea, erected in front of the Council House in Salisbury, has been inaugurated by Earl de Grey and Ripon, acting on behalf of Lord Palmerston. The statue, which is by Baron Marochetti, is in bronze, 9 feet high, and stands on a grey granite pedestal, from the works of Mr. Freeman, of Penryn, Cornwall. The pedestal itself is nearly 10 feet high. Lord Herbert is represented as in the act of delivering a speech. His left hand rests, as was usual, on his side, whilst in his right he holds a plan of the Herbert Hospital,—his favourite scheme for the well-being of the soldier. "Sidney Herbert" is the only inscription on the pedestal. The cost of the statue was 2,000*l.*

SALES OF PROPERTY.—At the Mart. By Messrs. Newton & Sexton.—Freehold, the Bradley Estate, in the parishes of Great and Little Bradley, Thurlow, and Cowlinge, Suffolk, comprising family residence, agricultural buildings, the manor of Little Bradley, and 1,092a. 2r. 25p. arable, pasture, and woodland; also the advowson of Little Bradley, the Royal Oak Inn, and several labourers' cottages—41,000*l.* By Messrs. Tebb, Brothers.—Leasehold ground-rent of 19*l.* 17*s.*, secured on ten houses, Nos. 5 to 14, Clifton-road, Newcross — 300*l.* Leasehold, three dwelling-houses, Nos. 8 to 10, Railway-grove, Newcross; term, ninety-nine years from March, 1855; ground-rent, 10*l.* 10*s.*; let for 54*l.* 12*s.*—310*l.* Leasehold, five houses, Nos. 1 to 5, Pump-court, White Horse-alley, Cow-cross; term, ninety years from Midsummer, 1856; ground-rent, 30*l.* per annum; let for 86*l.* 9*s.* per annum—190*l.*

SCOTTISH NATIONAL ALBERT MEMORIAL.—We understand that Her Majesty the Queen has signified her approval of a design prepared by Mr. Noel Paton for the Scottish National Memorial to the late Prince Consort, and that the committee who have the charge of its erection are at present engaged in ascertaining the probable expense of the design. According to the *Scotsman*, it may be said to present the appearance of a rich Gothic cross surmounted by a moulded cope and plinth, bearing a full-length statue of the Prince in the robes of the Order of the Garter. Under the trefoil arch on each of the four sides of the cross is a seated figure emblematic of science and the arts, which the Prince loved so well. The whole is supported on a moulded pedestal and flight of steps taking the form of a cross. The front of the pedestal under each of the figures bears an elaborate bas-relief. The height of the whole erection is, we believe, about 50 feet, and it is designed to be placed on the terrace in West Princes-street-gardens, opposite Frederick-street.

LONDON LABOURERS' DWELLING SOCIETY. THE PEABODY SCHEME, AND SANITARY REFORM OF EXISTING TENEMENTS.—In a printed letter, titled "Suggestions to be submitted to the Consideration of the Trustees of the Peabody Fund; by C. Girdlestone, M.A., Rector of Kingswinford," the author, after starting several objections especially to the erection of any more model buildings in London, says:—"With these serious objections against all other plans proposed, the writer is able to state, that the principle advocated in the subjoined letter; viz.—*the sanitary reforms of existing tenements*, has been tried, and has proved eminently successful." The Hastings Cottage Improvement Society, on this principle has, during the five years of its existence, paid nine half-yearly dividends of 6 per cent., and one of 5 per cent.; and its shares are readily saleable at a small premium. During 1861, some of its members commenced operations on the same principle, in the eastern part of London, as "The London Labourers' Dwellings Society," with every prospect of similar success. This latter society has now been in operation for more than two years, and has, it appears, even from its commencement, paid the shareholders a half-yearly dividend at the rate of 4 per cent. per annum. The present capital of the society consists of 3,700*l.*, divided into thirty-seven shares of 100*l.* each, all fully paid up, and a temporary loan of 262*l.* 7*s.* 1*d.* The expenditure has been as follows:—

Purchase of property	£3,300	0	0
Expenses of conveyance	118	19	7
Repairs and improvements	502	13	6
Surveyor's charges	38	4	0
Preliminary expenses and sundries	10	10	0
Total payments	£3,962	7	1

The success of the experiment has prompted the directors to purchase a large block of freehold houses in St. George's East, adjoining the London Docks. This property and the cost of putting it into suitable repair will require about 7,000*l.* additional capital. Dr. Greenhill, of Hastings, is the secretary.

ROYAL ITALIAN OPERA.—M. Gounod's "Faust" has been produced here with splendid completeness and commensurate success; Mdme. Miolan-Carvalho, Mdme. Didiée, M. Faure, Sig. Graziani, and Sig. Tamberlik presenting the chief parts. We must give a more particular notice on another occasion.

THE LINCOLN MODEL IN CORK.—Most of our readers will recollect the cork model of Lincoln Cathedral exhibited by Mr. Anderton in the International Exhibition last year. The *Reader* says,—That model led to many presents being made to Mr. Anderton, who, with the proceeds, has erected several houses in Lincoln, with inscription in front, "Perseverance, Cork, and Glue—1862."

MEMORIAL BELLS FOR BRAMLEY.—The village of Bramley was all astir lately in consequence of the arrival of six new bells for the new church. They were removed from the railway station on a wherry drawn by two powerful horses gaily decorated. The Bramley brass band, accompanied by hundreds of the inhabitants, paraded the principal streets. On arriving at the church, the Rev. Samuel Joy, incumbent, mounted the wherry, and, assisted by the numerous company, gave three hearty cheers for Mr. John Musgrave Sagar Musgrave, who has given five of the bells in memory of his uncle, Mr. Abraham Musgrave, the millionnaire, recently deceased. Cheers were also given for Mr. Richard Nickols, of Hill-top, who presents the other bell, along with a clock with four dials.

OPENING OF A CAIRN AT OLD DEER, IN SCOTLAND.—An untouched part of a large cairn, from which farmers have long supplied themselves with stones for drains, was lately explored, and a small cist, full of a black fatty substance, but without any vestige of bones, was discovered. The cist was only 13 inches long, 10 inches broad, and 9 inches deep. Several similar cists had been before found, all containing the same black substance, which differs much from the yellowish soil of the neighbourhood. It is almost as if it had been a practice, while such cairns were raised, to bury the hearts, or some such portion of the human body, in these cists, whatever became of the body itself, which may have fallen in battle at a distance from home. Consumption of the body by fire will not explain the fatty deposit. A great many similar cairns existed within six miles of the same spot, but few now remain.

THE PEABODY DWELLINGS.—At the last weekly meeting of the Metropolitan Board of Works, amongst the building and street applications was one from the trustees of Mr. Peabody's fund, stating that they proposed to erect a block of buildings for the poor upon a large plot of land in Shadwell, in accordance with a plan forwarded to the Board. The superficial contents of the building were 3,807 feet, and therefore 207 feet in excess of the area prescribed by the second rule of the 27th section of the Metropolitan Building Act. In reference to the application, Mr. Vulliamy, the superintending architect, reported to the following effect, viz.:—"The superficial area of the building will be 3,807 feet, and therefore 207 square feet in excess of the limit prescribed in the second rule of section 27 of the Building Act for buildings of this description; viz, separate sets of rooms or chambers tenanted by different persons. The rule deems such separate rooms, if contained within a building of more than 3,600 square feet in area, 'separate buildings,' and requires that they be divided, so far as they adjoin vertically, by party walls; and so far as they adjoin horizontally, by party arches or fireproof floors. . . . . A dispensation is sought under the powers of the 56th section; and for these reasons, that the insurance company regard the erection as virtually fireproof, the staircases and corridors being of stone; the whole of the partition walls of brick, without wall plates or bond timbers in any portion of the walls; the floors of the laundries and bath-rooms constructed with iron girders and brick arches; and the construction generally being of the most substantial and incombustible nature. All the rules of the Act, except that to which the present application refers, have been strictly adhered to: indeed, the thickness of the walls of the topmost story is 4½ inches more than the Act requires." Mr. Vulliamy, however, recommended that the application be not entertained. Mr. Le Breton moved that the matter should be referred to the Building Committee for further consideration. The chairman said the Board had no power to relax the provisions of the Act. After some discussion, the recommendation contained in Mr. Vulliamy's report was agreed to.

ANOTHER HOTEL FOR LONDON.—A prospectus has been issued of the City of London Hotel Company, with a capital of 50,000*l.* in shares of 10*l.* The object is to construct a hotel, with a large room for public meetings, on a site in Leadenhall-street, opposite the old East India House.

THE GLASGOW PRINCE CONSORT MEMORIAL.—The secretary, at a late meeting of the committee, read a minute of previous meeting, which stated that with the view of obtaining the best possible likeness of the late Prince Consort, it had been resolved that her Majesty should be requested to select the artist. A letter from the Lord Provost to Sir Charles Phipps, in terms of that minute, was also read, and the reply thereto, intimating the Queen's wish that the statue should be executed by Baron Marochetti, and that it should be of an equestrian character. The committee resolved accordingly.

PROPOSED RESTORATION OF ST. BARTHOLOMEW'S.—We are asked to mention that an Archæological Meeting will be held in St. Bartholomew's Church on Monday next, the 13th inst., at two p.m., when Mr. Beresford Hope, Mr. W. Tite, M.P., Professor Willis, Mr. J. H. Parker, and other gentlemen will attend, and give an archæological description of the church and the buildings of the priory connected with it, and some account of the proposed restoration of this interesting Norman church. The rector and churchwardens invite all archæological friends to inspect the church on this occasion.

MATERIALS USED IN THE 1862 EXHIBITION BUILDING.—"Bricks, 17,250,000; lime, 5,611 cubic yards; sand, 18,352 cubic yards; ballast, 8,632 cubic yards; cement and plaster, 47,105 bushels; cast iron, 4,953 tons; wrought iron, 2,269 tons; timber, 439,178 cubic feet, 2,238,722 lineal feet 9 inch by 3 inch battens, deals, and planks; stone, 62,831 superficial feet 6 inches thick and under; ditto, 6,877 cubic feet; zinc, 225,864 superficial feet; lead, 74 tons, 14 cwt.; felt, 623,000 superficial feet; slating, 71,260 superficial feet; glass, 216,808 panes, containing 667,542 superficial feet; putty, 95 tons 16 cwt.; nails, 193 tons 12 cwt.; cash paid in labour, 138,348*l.*"

A NEW HOTEL ON RICHMOND HILL.—The prospectus of the Richmond Hill Hotel Company has been put forward. The capital will be 100,000*l.*, in 10,000 shares of 10*l.* each, the first issue to be 5,000 shares only. The deposit is 10s. per share on application, and 1*l.* 10s. on allotment. The object is to erect on Richmond Hill an hotel possessing every modern luxury and convenience, whether for visitor or equipage. A site close to the Star and Garter has been secured, commanding a view of the Thames and surrounding country, at a cost of 7,500*l.* The property, which is known as Ashburnham Lodge, contains about three acres.

THE EDINBURGH SCHOOL OF ART.—The exhibition of drawings by the students of this school has been opened, within the Royal Institution, Mound. In its general character it is considered to be greatly in advance even of last year's exhibition. Ten prizes or national medallions have been awarded to the school, while to the head school at Kensington, which stood next in merit, only seven prizes were awarded. A prize of five guineas having been offered by Mr. Thomas Scott, of the firm of J. & T. Scott, cabinet-makers, George-street, for the best design of a book-case, four drawings were prepared, all, according to the *Scotsman*, very meritorious; but one in the Renaissance style, by Mr. Alexander C. Beattie, obtained the prize. The ornamental drawings by Charles Jockel, Alexander Kemp, George M. Paterson, W. D. Dobson, John Thomas Reid, &c., are noticed.

THE DUBLIN WATERWORKS.—TURNING THE COURSE OF THE RIVER VARTRY.—The ceremony of diverting the course of the River Vartry, for the purpose of constructing a water-tight dam at the principal storage reservoir of the intended Dublin Waterworks, near the village of Roundwood, in the county of Wicklow, was made the occasion of a festivity. About 300 ladies and gentlemen, including many persons of distinction, were invited by the contractor, Mr. M'Cormick, M.P., to meet the Lord Lieutenant, who turned the water into its new channel, and on the occasion knighted Dr. Gray, the chairman of the Waterworks Committee. The engineering work includes a tunnel, which extends under a hill for two miles and a half. As the tunnel is made through the rock, no pipes will be required there for the conveyance of the water. Calladry Moor is the catchment on which the reservoir is being constructed. It will cover an area of 409 acres, and will yield 12,000,000 gallons daily.

LONDON CHURCH BUILDING.—The Bishop of London has got about 40,000*l.* towards his great scheme of raising 1,000,000*l.* within the next ten years for building and endowing churches within his diocese. The bishop himself has contributed the sum of 20,000*l.*, while the Marquis of Westminster has promised 10,000*l.*

ARCHITECTURAL ASSOCIATION.—VOLUNTARY EXAMINATION CLASS.—Members of the Class will meet on Saturday, the 11th inst., at London Bridge Station, at two p.m., and proceed to the new Woolwich Hospital, &c. Mr. C. Fowler will talk on the subject of Foundations on Friday, the 17th inst.

ABERYSTWITH CEMETERY CHAPELS COMPETITION.—A competitor asks us to complain that three months have elapsed since he sent in his designs, and that he can get no information. Architects who submit designs in competition for an offered premium of 5*l.* 5s. have not a very strong hold on our sympathies.

THE "CROMWELL FOUNTAIN" AT THE CRYSTAL PALACE.—Since the incongruity of Cromwell, with fish-tailed figures of War, &c., in the centre of the upper terrace, and right before the great entrance, was pointed out in the *Builder*, we are glad to observe that the force of the protest against it has been well considered by the directors; and the result is, that, last time we visited the Crystal Palace, although the statue had been placed and the work had been almost completed, Cromwell was again displaced, and lay in his winding-sheet of sailcloth down below.

THE TRIAL OF STEAM LAND FIRE ENGINES—AWARD OF PRIZES.—The patent steam fire-engine by Messrs. Merryweather & Sons, of Long-acre (large size), was awarded the first prize of 250*l.* The 100*l.* prize was awarded to Messrs. Shand, Mason, & Co., of Blackfriars-road, for the next large engine. It should be stated that this engine was over 30 cwt. and under 60 cwt., and that a quantity of shavings got by some means into the suction-pipe of the engine at her trial. Amongst the small land steamers, the prize of 250*l.* was awarded to Messrs. Shand, Mason, & Co. The 100*l.* prize was awarded to Lee's small engine.

CYLINDRICAL ROTARY PRINTING PRESS.—Wilkinson's machine prints 22,000 papers on both sides in an hour, and dispenses with manual labour, it is said, to an extent never before contemplated. Its principle, nevertheless, is simple, consisting merely of the passage of the paper, not cut into sheets, but made in an immense web, between cylinders on which the types are set; while a folding and cutting machine, self-acting, is ready to separate each paper as it is printed from the web, and pass it out of the machine ready for publication. Those who have seen this machine at work in London agree that it is as much superior to Hoe's as Hoe's is to Middleton's.

EXPENSE OF NEW STREETS.—A return presented to Parliament shows that the expense of New Oxford-street (made between 1842 and 1847), was 330,074*l.*; Cranbourne-street (between 1841 and 1845), 206,093*l.*; and Victoria-street, Westminster (between 1845 and 1851), 215,000*l.* The first two streets were paid for out of the London Bridge Approaches Fund, and rents and sales of property purchased, and were constructed under the charge of the Woods and Forests. Victoria-street was constructed by the Westminster Improvement Commissioners, subject to limited control by the Woods and Forests, and the expense was defrayed by coal duties and improved rates, amounting to about 100,000*l.*, the balance being raised on mortgages and bonds.

FAIRFORD.—On the 21th ult., the new Congregational Chapel erected here was opened. This edifice has been erected by Messrs. Mitchell, of Fairford, and is in the Gothic style, according to a design prepared by Mr. T. R. Smith, of London. The chapel, which has an end gallery, measures internally 41 feet by 29 feet, has a school-room behind (the pulpit communicating with the chapel by folding doors), and measures 29 feet 11 inches by 21 feet. The woodwork is stained and varnished, and the dressings are of Bath stone. The building, including extras, architect's fee, &c., has cost over 900*l.*, and the sum of 300*l.* is still needed to finish paying for it.

THE *Daily News*, July 1st, speaking of Benson's watches in the Exhibition, says:—"Here are arranged a fine selection of watches manufactured by him on the latest and most approved principles of horological science. When we compare them with the specimens of ancient watch-work which are placed beside them, or even with those worn by our grandfathers, the immense advance in this branch of the mechanical arts is at once apparent." Chronometer, duplex, lever, horizontal, repeaters, centre seconds, keyless, split seconds, and every description of watch, from the plainest to the highest quality of which the art is at present capable, and adapted to all climates. Benson's Illustrated Pamphlet on watches (free for two stamps) contains a short history of watchmaking, with descriptions and prices. It acts as a guide in the purchase of a watch, and enables those who live in Scotland, Ireland, Wales, the Colonies, India, or any part of the world, to select a watch, and have it sent free and safe by post.—J. W. BENSON, Prize Medallist, 33 and 34, Ludgate-hill, London. Established 1749.—[Advt.]

EDMONTON.—Materials of the Vicarage.

MR. A. RICHARDS will SELL by AUCTION, on the PREMISES, near Edmonton Church, on MONDAY, JULY 13th, in lots, to be taken down by the purchasers, the MATERIALS, comprising about 80,000 bricks, forty squares of 3-in. boarding and joists, fittings, about two tons of lead, coppers, lift-pumps, cisterns, square plain tiles, stone, &c.—Catalogues obtainable on the Premises, and of the Auctioneer, Tottenham.

LOMBARD STREET.—Valuable Building Materials.

MR. PHILIP D. TUCKETT will SELL by AUCTION, on the PREMISES, on TUESDAY, JULY 28th, 1863, at TWELVE, all the valuable MATERIALS of the TWO HOUSES Nos. 30 and 31, Lombard-street: comprising a quantity of excellent STOCK BRICKS, lead flat, gutters, cisterns, and pipes; tiling, useful lumbers, door boards, sashes, doors, interior fittings, stoves, cb ney-pots, water closets, &c.—May be viewed the day previous. Catalogues of Mr PHILIP D. TUCKETT, Land Agent, Surveyor, &c. 76, Old Broad street, E.C.

WOOD LANE, BUSHEY HEATH—FINE FELLED TIMBER TREES.

MR. A. RICHARDS will SELL by AUCTION, on the GROUND at the top of Brockley hill, on WEDNESDAY, JULY 15th, at ONE without reserve, about 257 OAK TREES, some of large dimensions; Ash, Chestnut, Birch, Beech, Cherry, Hornbeam, and per ditto 250 Faggots, and a quantity of Hedgewood.—May be viewed, and catalogues obtained at the Abercorn Arms, Harmuer; and of the Auctioneer, Tottenham.

GEORGE MITCHELL'S MARBLE and STONE WORKS, WALTON STREET, BROMPTON, S.W.

Notice of PRIVATE SALE of about 200 MARBLE CHIMNEY-PIECES, to be sold at very reduced prices (to save the expense of removal to the Brompton-road), in the following Marbles, viz.:—Statuary, Rouge Royal, Black and Gold, Black, Sienna, Bardilla, Dove, California, St. Anu's, Rouge Jasper, Jeune Fleure, Brocatella, Genoa Green, Irish Green, Blue Belge, Emperor's Red, Irish Fossil, Compaine Melange, Vein, Sicilian, and various excellent specimens of British Marbles, varying in price from 1l. 10s. to 50l.; and for elegancy of design, workmanship, and quality, not to be surpassed in England. Purchases to the extent of 30l. and 50l. approved bills of three and four months will be taken, less 25 per cent. cash. Purchasers from the country will be supplied with packing-cases, and the same packed and delivered to any of the metropolitan stations for 1 per cent. on the amount purchased.

NORTH LONDON RAILWAY.—CITY EXTENSION.—MATERIALS OF MODERN HOUSES.

MESSRS. KENNEDY & BONNY will SELL by AUCTION, on the PREMISES, on THURSDAY, JULY 23rd, 1863, at TWELVE for ONE o'clock, the MATERIALS of about FORTY HOUSES in Bloomfield-street (and other streets near), Kingsland-road. For further particulars see future advertisements.

Camden Town, July 9, 1863.

HIGHLY IMPORTANT TO SLATE QUARRY PROPRIETORS AND BUILDERS.

Extensive unreserved Sale of Machinery, Steam Engine, 100,000 of Manufactured Slates, as well as the Interest in the Lease of the Bwich Slate Quarries, situate at Dolwyddelen, near Llanrwst, in the county of Carnarvon.

MR. W. DEW has been favoured with positive instructions to SELL by PUBLIC AUCTION on WEDNESDAY, 29th JULY, 1863, commencing at ELEVEN o'clock a.m. precisely, at the above-named Quarry, distant 9 miles from the Railway terminus at Llanrwst, 9 miles from Bettws y Coed, and about 4 miles from the Festiniog Quarries. The whole of the VERY VALUABLE MACHINERY and WORKING PLANT, in Lots, all of which will be found to be of a superior description, and in excellent working order. They consist of 4 Sand Saws—frames 12 ft. by 8 ft., 2 Sawing Tables, 3 Planing Machines, valuable Shafting; a fine Water-wheel, 30 feet diameter, 2 feet breast, with iron Buckets; a splendid horizontal High Pressure Steam Engine, about 15 horse power; 11 Tram Waggons; 6 iron Skips; 1,300 yards Lineal Tram Rails; Turn Tables; Iron Pipes, 8in. diameter; a quantity of Wrought and Cast Iron; Balk and other Timber; and about 28 Tons Mess Slates.

At the commencement of the Sale the present company's Interest in the Lease in the said Bwich Quarry will be disposed of, which will give the purchaser the advantage of buying such of the Machinery and Plant as he may require. These Quarries have now been worked for some years, and considering the limited capital that has been employed, the annual yield of Slate has been unusually large. A further small outlay is only required to render this one of the most productive and profitable quarries in the country. On THURSDAY, the 30th JULY, 1863, the whole of the STOCK of MANUFACTURED SLATES and SLABS lying on the Trefriw Wharf, will be SOLD by AUCTION, without reserve, at ELEVEN a.m.: consisting of 3,000 Princesses, 40,000 Duchesses, 30,000 Countesses, 8,000 Viscountesses, 30,000 Ladies, 12,000 Doubles, 45 Tons Rags, and about 74 tons of Planed Slabs of various dimensions and thicknesses. Descriptive Catalogues of the whole of which may be had at the principal hotels in North Wales; of GEORGE HADLEY, Esq. 20, St. Helen's Place, Bishopsgate Street, London; Mr. BROTHERHOOD, Llanrwst; and from the Auctioneer, British Hotel, Bangor. The whole on view any day up to the day of Sale.

MR. J. H. LEONARD,
ARCHITECTURAL DRAUGHTSMAN,
ARTISTIC COLORIST, AND LITHOGRAPHER,
Removed from 21, Montague-street, Russell square, to 58, TORRINGTON SQUARE, W.C.

Immediate income required, three guineas and a half per week. Could undertake the management of an office, and introduce further business.—Apply by letter in the first place, to CORONA, 37, Arundel street, Strand, W.C.

TO ARCHITECTS AND SURVEYORS

THE Advertiser is open to a RE-ENGAGEMENT as JUNIOR ASSISTANT. Is 22 years of age, and has had four years' experience. Salary moderate Address, P. Q. No 2, Bolton terrace, Oakfield-road, Penge, S E.

TO ARCHITECTS AND SURVEYORS

THE Advertiser is desirous of obtaining a permanent SITUATION, having had several years' experience in surveying, levelling, plotting surveys, laying out ground for building purposes, finishing working and other drawings, and who is also conversant with taking out quantities, and the general routine of an Architect's and Surveyor's Office. First-rate references.—Address, T. J. E. 4, Bath-terrace, Forest-gate, Essex.

TO ARCHITECTS.

THE Advertiser, of great experience, will be obliged to any Gentleman who may engage him as CLERK of WORKS, town or country.—Address, B. N. Office of "The Builder."

TWO respectable Young Men (brothers), one a PAINTER, the other a GRAINER, and who thoroughly understand their trades, are in WANT of an ENGAGEMENT for three or six months, or more, town or country. Wages moderate.—Address, R. Y. 9, Paddington-street, St. Marylebone, W.

THE Guardians of a Youth, aged 17 years, are desirous of placing him with a Builder as IN-DOOR APPRENTICE. He has been in the office of a Civil Engineer and Surveyor for 18 months, where he has had practice in copying, drawing, &c.—Address C. BREAM, 24, Humberstone gate, Leicester.

BUILDER'S CLERK.—WANTED, by a Young Man, a RE-ENGAGEMENT as above. Has a good practical knowledge of the Building trade, and is well acquainted with the routine of an office. Salary, 45s. per week.—Address, R. S. 18, Portland-place, Clapham, S.

AN experienced Land and Railway Surveyor is open to an ENGAGEMENT for a few months, with the assistance of a pupil. The highest references given.—Address, E. J. G. Post-office, Parliament street, S.W.

AN ENGINEERING and ARCHITECTURAL ASSISTANT, engaged for the past sixteen years on plans, &c. for public works of water supply, gas, and town sewerage, and in designing and superintending the erection of private and other buildings, is now open to a permanent ENGAGEMENT. First-class testimonials.—Address, A. C. E. 9, Trellick-terrace, Vauxhall-road, Pimlico.

A THOROUGHLY PRACTICAL CLERK of WORKS, with first-rate testimonials, having just completed a large job, is open to an ENGAGEMENT.—Address, with terms, T. H. C. Post-office, Peckham, S.E.

TO SURVEYORS, LAND AGENTS, &c.

A GENTLEMAN, of middle age, who has been for twenty years in the employment of an eminent surveyor, from whom he has excellent testimonials, wishes to be ENGAGED in a SURVEYOR'S OFFICE, as OFFICE-KEEPER. Would assist with the office duties generally, or make small surveys. Is a first-class judge of the nature, formation, and value of land, and would be invaluable to a beginner. Has an income which enables him to accept of a small salary at the commencement. Has surveyed and valued about half a million of acres.—Address, F. G. 24, Cunatsworth-street, Edgehill, Liverpool.

TO JOURNEYMEN PLUMBERS

A GOOD PRACTICAL PLUMBER, one who thoroughly understands country work, and who has no objection to fill up his time with plain painting and glazing, may have liberal wages and constant employment by applying (prepaid) to EDWARD THORNTON, Plumber, &c. Ainesbury, near Salisbury.

A THOROUGHLY PRACTICAL CLERK of WORKS, who has just completed some extensive works, is desirous of a RE-ENGAGEMENT. Is well versed in measuring, estimating, and taking out quantities.—Address, J. H. T. Office of "The Builder."

A MECHANICAL DRAUGHTSMAN of considerable practical experience is open to an ENGAGEMENT in or near London.—Address, H. E. 6, Cottage-place, Greenwich, S.E

TO NOBLEMEN AND GENTLEMEN.

AN Experienced BELL-HANGER and SMITH, well conversant with light ironfencework, wishes for a SITUATION on an Estate, as above. First-class references.—Address, J. W. 48, Leader-street, Chelsea, Middlesex.

TO BUILDERS AND OTHERS.

AN active Man, between 50 and 60 years of age, is in WANT of EMPLOYMENT in a capacity not very laborious. References as to character, and, if needful, security given. Wages a secondary object.—Address, J. B. Mrs. Smith, Stationer, 12, Gower-street North, N.W.

A YOUNG MAN wants EMPLOYMENT in the Gas-fitting, Bell-hanging, and Hot-water Work. Has served two years in the trade, and wishes for improvement.—Address, H. E. 13, Hanover-street, Sydenham, Kent.

TO BUILDERS AND OTHERS

A THOROUGHLY PRACTICAL MAN, well up in construction and the details thereof, can make working drawings, set out, take out quantities, estimate and measure up work, and could conduct a business, wishes for a permanent SITUATION. Good testimonials; salary moderate.—Address, O. F. Office of "The Builder."

TO CONTRACTORS, BUILDERS, GAS ENGINEERS, AND OTHERS.

A STEADY, middle-aged, well-experienced FITTER, with good reference; would be a great assistance to a builder; used to new buildings and heavy work.—Address, A. B. 21, Percy-street, Bedford square, W.

A S PLUMBER, GLAZIER, and PAINTER. The Advertiser is desirous of a SITUATION as WORKING FOREMAN. Unexceptionable references as to ability and integrity Address, J. W. care of Mr. Bates, News Agent, High street, Camberwell.

ASSISTANT.—A good Draughtsman, having a fair knowledge of quantities (has acted as clerk of works), desires an ENGAGEMENT with a provincial Architect. Good references. Salary moderate.—Address, B. B. Post-office, Bermondsey-street, S.E.

TO PLUMBERS, BUILDERS, &c.

A STEADY, respectable Young Man (from the country), aged 26, wants a CONSTANCY, as PLUMBER or THREE-BRANCH HAND Reference, if required.—Address, B. P. 2, Denmark-grove, Islington.

TO BUILDERS, SURVEYORS, &c.

A GENTLEMAN, of middle age and considerable experience, desires EMPLOYMENT, either by salary or commission. Thoroughly understands taking out builders' prices, measuring, and quantities. Has been in practice and theory many years, and acquainted with the routine of respectable builders' offices.—Address, D. C. R. 5, Trinity terrace, Trinity square, Southwark.

A YOUNG MAN, aged 20, Son of a respectable Builder, is desirous of obtaining a SITUATION as CLERK in a Builder's office. Writes a good hand, quick at mensuration, and has a slight knowledge of drawing. Salary 50l. per annum. Good recommendation can be given. Apply, Postmaster, Chilbolton, Winchester, Hants

PARTNERSHIP.

AN ARCHITECT and SURVEYOR, of experience, is open to negotiate for a SHARE in a well-established PRACTICE, where, from ill health or other causes, the principal is desirous of meeting with a young and energetic man.—Address, with full particulars and terms, which must be moderate, to H. G. T. Office of "The Builder."

A Stock of 500 always to choose from at

J. W. BIRD & CO.'S,
THE EMPORIUM,
145 & 143½, EUSTON ROAD,
N.W.

A Marble Box Chimney, with 6-inch piers, as Illustrated, for 28s. and fitted to any opening up to 3 feet square.

STONE DITTO, WITH BEAUTIFUL MOULDED CAPS, FOR SEVEN SHILLINGS.

Monuments and Tablets in great variety, equally low in price
Masons' Work of all kinds contracted for and executed with despatch, in Town or Country.
A VACANCY FOR AN OUT-DOOR APPRENTICE.

NOTICE OF REMOVAL.

MESSRS. COLLINS & GREEN

Beg to advise their Friends and the Profession that as the London, Chatham, and Dover Railway have taken their late premises at Albion-place, for the new Blackfriars Station, they have Removed their extensive Stock of

MARBLE CHIMNEY-PIECES, STOVES, RANGES, &c.

TO THE ROTUNDA, No. 3, BLACKFRIARS ROAD.

C. & G. have now, as heretofore, the best and most varied assortment of first-class Goods in their trade, of every description and at every range in price.

They respectfully invite a visit from Architects and Builders to their present Show Rooms, which include an area of upwards of 12,000 super. feet, and replete with every Architectural requirement in Marble or Iron.

ROTUNDA GALLERIES, 3, BLACKFRIARS ROAD.

CITY WAREHOUSE, 38, NEW BRIDGE STREET, BLACKFRIARS.

MANUFACTORY, LETT'S WHARF, and OLD SHOT TOWER WHARF, LAMBETH.

Estimates given for every description of Marble or Iron Work.

GENERAL IRONMONGERY, AND BATH-WORK, &c.

Hot Water and Range Work, all requisites being kept in Stock.

CITY of LONDON.—BARBERS' HALL. TO BE LET, on a Building Lease, Nos. 33, 34, and 35, Monkwell street, Wood-street, and a portion of the Court-yard Hall and Offices in the rear.—For particulars and plans, apply to the Beadle, at the Hall; or to the Clerk, HENLEY GROSE SMITH, Esq. 4, Warnford-court, Throgmorton street, E.C.; or to Mr. C. J. SHOPPEE, Architect, 61, Doughty-street, W.C.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land tax redeemed, conveyance free. Also, PLOTS TO BE LET, on a Building Lease, for ninety nine years.—For plans, &c apply by post, pre-paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

LAND, situate on Bromley-hill, Kent, TO BE LET on Building Lease, suitable for the erection of villas for residence or investment, they being in great demand in that locality. The Land is within ten minutes' walk of the Shortlands Station, and in a beautifully wooded district. The site is elevated, it has a sub-soil of white sand and dry gravel, and a supply of very fine spring water.—Apply to JOHN WIMBLE, Esq. 2, Walbrook, E.C.

ELIGIBLE BUILDING LAND TO BE LET, on 99 years' Lease, in the best part of Stoke Newington, where houses are in great demand. Bricks on the estate, and supplied at a low price.—Apply to Mr. RODDA, Bouverie-road, Church-street, Stoke Newington.

TO BE LET, a capital WHARF and DRAWDOCK, known as "Searle's Wharf," most eligibly situated at the foot of New Westminster Bridge, and opposite the Houses of Parliament.

The drawdock has been closed for some years, and is now re-opened.

From its excellent situation and the probability of the Scotland-yard Wharfs being closed at an early date by the Thames Embankment, a very valuable business may no doubt be depended on.

A residence is attached, which may or may not be taken with the wharf or drawdock

Apply to Mr. W. HEWETT, 84, York-road, Lambeth.

WOODFORD RAILWAY.—The GROVE WANSTEAD—Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Snaresbrook Station is 400 yards only from the Estate, and the City is reached in twenty-five minutes. The Leases will contain a clause entitling the Lessee to purchase the Freehold with a specified time. LAND also TO LET at Blackheath, Tottenham, Kingston; some very eligible SITES in the Grove road, Mile-end, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 25, Cannon-street.

TO BUILDERS.—TO BE SOLD (a genuine concern) a small HOUSE and SHED, with lead flat. H... been for many years the residence of a builder. The yard has been used as a commission yard. The whole, with the goodwill, builder's plant, a quantity of building materials, and lease, of which three... four years are unexpire... at the small ground rent of 2... per annum, to be sold for 325... in consequence of the death of the occupier. Apply to Mr. CHRISTIAN, House Agent, 4, Commercial-place (opposite Jamaica-street), Commercial-road, E. between the hours of Six and Nine p.m.

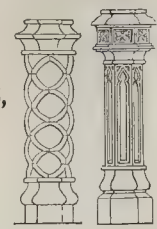
NEW KENT ROAD, DOVER PLACE Saint Bartholomew's Hospital.—TO BE LET, from LADY DAY next, on Repairing Leases for twenty-one years, the HOUSES numbered 17 to 27, inclusive.—For further particulars, apply at Mr. HARDWICK'S Office, No. 1, Henrietta-street, Cavendish-square. Tenders are to be sealed up and delivered at the Clerk's Office, within the Hospital, on TUESDAY, the 14th day of JULY next, at a Quarter before ELEVEN precisely. WILLIAM WILBY, Clerk.

St Bartholomew's Hospital, June, 1863.

FREEHOLD BUILDING LAND SURREY, on the High Road from Kingston to Dorking, two miles and a half from Leatherhead, and three miles and a half from Surbiton Stations, and one mile and a half from Epsom. Frontage 1,005 feet, and 478 feet; contents, seven acres and a half. Charming country. TO BE SOLD or LET on LEASE.—For terms apply to Mr. BULLOCK, Land Agent and Auctioneer, 211, High Holborn.

AUSTIN, SEELEY, & CO.

Beg to remind the Profession that they have the largest number of



VASES AND CHIMNEY-TOPS,

of any manufacturer. They can offer a pair of handsome Architectural Vases, 4 or 5 feet high, at about half the price of carved stone.

Their Stock of

CHIMNEY-TOPS

comprises about eighty varieties.

Nos. 369 to 375, EUSTON ROAD, REGENT'S PARK.

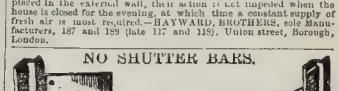
STANLEY'S IMPROVED DRAWING PEN

VENTILATION—PURE AIR.



Sherlogham's Day and Night Ventilator for the admission of Pure Air.

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the House is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union street, Borough, London.

NO SHUTTER BARS.

JENNINGS'S SHOP-SHUTTER SHOE.

SHOP SHUTTERS are SHOD and SECURED by the above, at HALF THE COST OF THE UNSIGHTLY AND DESTRUCTIVE SHUTTER BAR. Shops referred to in every public street in London.

When ordering the above, send FINISHED THICKNESS of Shutters, and the way they go up.

Sold by all Ironmongers, and the Inventor,

GEORGE JENNINGS,

Sanitary and Engineering Depôt, Palace Wharf, Stangate, Lambeth, S.

LARCH PORR and RAIL FENCING required, about sixteen miles.—For particulars apply to SMITH & KNIGHT, 1, Great George street, Westminster.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS. Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT"

THOMAS HUBBUCK & SON,

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard stone has been an obstruction to Art, but since the Fluo-Silicic process can be applied so readily to soft stone after it is carved, that obstruction ex sts no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information, apply to the Manager of the Company, Mr DUDLEY, Architect, as above

BARTLETT, BROTHERS, & CO.

HAY'S PATENT WATERPROOF GLUE

and INDIA-RUBBER VARNISH.—To ARCHITECTS, BUILDERS, PAPER-HANGERS, &c. &c.—The WATER-PROOF GLUE is a special anti-damp, and is suitable for contractors, joiners, coffin-makers, &c. &c. The VARNISH for damp walls, previous to papering, coating zinc verandahs, &c. &c. Copy of a letter from Messrs. Rogers & Booth, contractors, Gosport:—

"We have repeatedly used your Waterproof Glue as a preventive against damp, and have found it most valuable in preparing walls to receive paper. In one instance, where the walls were thoroughly saturated with moisture from earth filled against the outside, we used your varnish internally, and papered the surface, within a few hours of its being applied, with complete success. We have also used your preparation for coating a large number of cab-iron piles, at the Gunwharf, Portsea, for her Majesty's War Department."

To be had from all Ironmongers, Oil and Colourmen, &c.

Manufactory, Chandos street, Portsmouth: Mr. GEORGE WEEKS, Manager. GEORGE C. WARDEN & CO. General Agents, 12, London-street, London, E.C. where specimens of its application can be seen.

HOLLINGS, SHARP, & ULLITHORNE,
1, Field court, Gray's-Inn.

Dated this 3rd day of July, 1863.

REDHILL, SURREY.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, London, on FRIDAY, JULY 24th, 1863, at TWELVE for ONE o'clock, in a portion of the eligible FREEHOLD BUILDING LAND, free of tithe and land tax, and situate on the London and Brighton road. The slope between Colgate's and Nutcroft's, and on the Bridge-road, close to the Royal Oak Inn, and will be five minutes' walk of the Redhill Station, on the London, Brighton, and South Coast Railway. Nine-tenths of the purchase-money may remain on mortgage or contract at 5 per cent., to be paid in nine years by half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice. Particulars, plans, and conditions of sale, may be obtained before the sale; at the principal Inns in the neighbourhood; of Mr. THOMAS BUCKLAND, Church-street, Reigate; of Messrs. RUSSELL & DAVIES, 29, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale.

LEYTON, ESSEX. Eligible Freehold Building Land

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, London, on FRIDAY, JULY 24, 1863, at TWELVE for ONE o'clock, about Thirty-Eight Lots of eligible FREEHOLD BUILDING LAND, free of tithe and land tax, with frontage to the Vicarage-road, Grange Park, Leyton, also a new Lane fronting the Railway Cottages, and Grange Road. The property is suitable for the erection of villa or good cottage residences, and is situate within ten minutes' walk of the Low Leyton Station, on the Eastern Counties Railway, and within a mile and a half of the Stratford and Lea bridge Stations on the Great Eastern Railway. The roads will be gravel, and water can be procured on site.

The purchase-money may be paid by a deposit of 10 per cent. and the remainder in nine years by half-yearly instalments, with interest on the unpaid balance at five per cent.; but the whole or any part of the balance may be paid off at any time without notice. Particulars, plans, and conditions of sale may be obtained about ten days before the sale, at the Lion and Key, Leyton; of Messrs. RUSSELL & DAVIES, Solicitors, 29, Coleman-street, London, E.C.; and of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale.

IMPORTANT SALE To Builders, Contractors, and Others.—Boston, Lincolnshire.

TO BE SOLD by AUCTION, in the month of JULY next, a valuable FREEHOLD ESTATE, situate in Witham-street, in Boston aforesaid, consisting of excellent BUSINESS PREMISES, and a range of newly-erected dwelling-houses, the large carpenter's and joiner's shops, timber, lime, and other sheds stables, a large yard, and other premises. A very extensive and lucrative business has been carried on the premises for a series of years past, and the same were lately in the occupation of Mr. Benjamin Booth, Builder, deceased and are now of the Executors in Trust under his will.—To view the premises, and for further particulars apply to Mr. JOHN CARTWRIGHT, of Boston aforesaid, Ironmonger, and Mr. ROBERT MARSHALL, of the same place, Chemist and Druggist; or at the Offices of Mr. FREDERICK COOKE, Solicitor, Boston

Boston, June 15th, 1863.

Very important first class Freehold Building Estate at West Brompton, within six or seven minutes' walk of the Exhibition Building.

MESSRS. DEBENHAM & TEWSON will SELL, at the MART, on THURSDAY, JULY 23rd, at TWELVE (unless previously agreed upon by private contract), the RIGHT of PURCHASE, at an agreed price, any time previous to 25th MARCH, 1864, of about 8½ ACRES of very valuable FREEHOLD BUILDING LAND, situate immediately adjoining The Boltons, at Brompton, together with the two residences known as Hereford House and Colherne Court, now on the property. The estate possesses frontages on three sides, and, being within a few minutes' walk of Hyde Park and the most fashionable districts of the West-end, offers an unusually fine opportunity for an important building operation in first-class residences. The sell is a deep gravel, and there is an abundant supply of fine spring water.—Particulars, with plans (shortly), of Messrs. J. & J. H. LINKLATER & HACKWOOD, Solicitors, Walbrook; of F. C. LUNDY, Esq. Solicitor, Carlton Chambers, Regent-street; of H. H. CANNAN, Esq. Official Assignee, 36, Basinghall-street; and of the Auctioneers, 80, Cheapside.

JERMYN STREET, ST JAMES'S.—BUILDING MATERIALS

PULLEN, HORNE, & EVERSFIELD are instructed to SELL by AUCTION, on the PREMISES, on WEDNESDAY, JULY 15th, at TEN for ELEVEN, in lots, the BUILDING MATERIALS, FIXTURES, and FITTINGS-UP of stables and coach-house, situate in Babmaes Mews, Wells-street, Jermyn-street, of the said description:—May be viewed, and catalogues had of PULLEN, HORNE, & EVERSFIELD, 40, Parliament-street, S.W and 80, Fore street, E.C.

WALWORTH ROAD.—Extensive Sale of Building Materials.

PULLEN, HORNE, & EVERSFIELD are instructed by the Worshipful Company of Fishmongers to SELL by AUCTION, on the PREMISES, on FRIDAY, JULY 17, at TWELVE o'clock, all the valuable BUILDING MATERIALS of about 26 HOUSES, situate in Crown row, in front of the Walworth-road, Prospect-row, and Crown-square: comprising capital stock bricks, a large quantity of pan and plain tiles, stout rafters, joists, girders, and other excellent timber, sound floor boards, glazed sashes, plate-glass and other shop-fronts, a large assortment of doors, partitions, marble and other chimney pieces, and interior fittings, stone paving, coping, cills and steps, wood and iron railing and fencing, lead, gutters and pipes, cisterns, stoves, ranges, and numerous useful fixtures and fittings-up.—May be viewed the day previous, and Catalogues had of W. B. TOWSE, Esq. Fishmongers' Hall; of RICHARD SUTER, Esq. Architect, 38, Fenchurch-street; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament-street, S.W.

BERMONDSEY NEW ROAD.—Building Materials of Five Houses.

PULLEN, HORNE, & EVERSFIELD are instructed to SELL by AUCTION on the PREMISES, on TUESDAY, JULY 21, at TWELVE o'clock, the BUILDING MATERIALS and FIXTURES of Five HOUSES and SHOPS, Nos. 62, 63, 64, 65, and 66, Bermondsey New-road, adjoining the Bricklayers' Arms, Old Kent-road, of the usual description.—May be viewed the day previous, and catalogues had at the Architect's, Mr. Goldthill; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament street, S.W.

FARM AND SLATE QUARRY, SOUTH DEVON.—An excellent Farm, with large and valuable Slate Quarry, in the Parish of Ugborough, near Ivybridge, Devon, twelve miles from Plymouth and close to three important Stations on the South Devon Railway, TO BE SOLD by AUCTION, by

MR. JOHN WILLETT, on MONDAY, the 13th day of JULY next, at the LONDON INN, Ivybridge, at TWO o'clock for HALF-PAST in the afternoon, either together or in the following lots (subject to such conditions as will be then and there produced), viz.:—

Lot 1 comprises a good FARM-HOUSE, with all necessary farm building, and SEVENTY SEVEN ACRES (be the same more or less) of superior orchard, meadow, arable, and pasture land, in the occupation of Mr. Richard Cole, as tenant thereof, for a term of seven or fourteen years from Lady-day, 1861. Also a SLATE QUARRY, measuring about four acres of same estate, which has been in work about a century, and which is now held under lease for a term of twenty-one years from the 24th JUNE, 1853, by E. T. Roe, esq. M.D. producing a large quantity of slate of a very superior quality. About fifty acres of the farm contain slate of the best description, and several sets could be granted thereout, the rock being inexhaustible.

Lot 2 Two superior COTTAGES, one of which is fit for the residence of a respectable family, having eight rooms, and the other cottage all stone fair rooms, with necessary out-buildings. Two good Gardens and a Field of Land, containing 3a. 0r. 23p. or thereabouts.

The WHOLE of the PROPERTY is TITHE-FREE, and LAND-TAX REDEEMED.

The above property being full of slate rock, within a mile and a half of the Stowford Sidings, and about two miles from Ivybridge and King-bridge road stations on the South Devon Railway, only twelve miles from the Port of Plymouth, and nine miles from Totnes, are great facilities for sending the slate to any part of the kingdom. Such an opportunity for a spirited capitalist or a company to enter largely into the slate trade is very seldom to be met with. From the great facilities for sending slate by rail and water, it is quite certain that a large profit can be realised. To persons desirous of mercantile investment this estate presents an opportunity of more than ordinary advantage. The farm is pleasantly situated, and many good sites for building can be found on the property. The nearest towns for cattle are Ivybridge, two miles (monthly); Modbury, three miles, ditto; and Totnes, nine miles, ditto. There is good trout fishing in the neighbourhood. Pheasants are kept at Ivybridge, and hunt the country immediately around. For viewing application may be made to Mr. HENRY SUPER, the owner, at Wood Cottage, on the property, on Tuesdays, Wednesdays, and Thursdays. Plans and particulars can also be obtained of him; of the Auctioneer, Ashprington, near Totnes; or of Mr. WALTER FRIEND, Solicitor, Post-office Chambers, Exeter

Exeter 13 June, 1863.

On MONDAY, JULY 13th, at TWELVE for ONE, punctually.—To RILLIARD TABLE, CHAIR, and CABINET MAKERS, and OTHERS.

MESSRS. LEREW & LEREW will SELL by AUCTION, on the PREMISES, Camden-terrace, Camdentown, ELEVEN THOUSAND FEET of HONDURAS MAHOGANY, in logs, &c.; and about 300 other lots of builder's stock in general; viz.—2,000 planks, deals, and battens; 400 cut ditto; 180 squares of flooring, dressed, 1¼ Baltic spars, wide pine beds, rosewood and match boards, doors, &c.—Auction Offices, 2, Cardington-street, Hampstead-road.

SOUTH NORWOOD, within a short distance of the Norwood Junction Station and the Crystal Palace

MESSRS. BLAKE will SELL by AUCTION, at GARRAWAY'S COFFEE HOUSE, Change-alley, on TUESDAY, JULY 21, at TWELVE, a valuable and attractive FREEHOLD ESTATE; comprising a small, genteel residence, delightfully situate at Whitehorse-hill, with coach-house, garden, and park-like meadow land highly eligible for sub-division for the erection of residences), containing altogether about six acres, and twelve freehold building plots, having capital frontages to a new road, connected with Beulah hill road. Possession to the whole will be given on the completion of purchase.—Particulars, with plans, may be had at Garraway's Coffee-house; at the Jolly Sailor and White Hart Inns, Norwood; of Messrs. DRUMMONDS, ROBINSON, & TILL, Solicitors, Croydon; and of Messrs. BLAKE, Croydon.

WANDSWORTH-COMMON, Surrey.—Very beautiful and important Freehold Estate, comprising a desirable family residence, with extensive garden, pleasure-grounds, stabling, and offices, and about 121 acres of Freehold and upwards of 24 acres of long Leasehold Land, with several thousand feet of building frontage to capital roads

MESSRS. NORTON, HOGGART, & TRIST have received instructions from the Devisee and Representative of the late Henry McKellar, esq. to offer for SALE by AUCTION, at the MART, opposite the Bank of England, on WEDNESDAY, JULY 22, at TWELVE, in nineteen lots (unless previously disposed of by private contract), the very valuable and important FREEHOLD ESTATE known as Wandsworth Lodge, situate at Wandsworth-common, in the Parishes of Battersea, Streatham, and Wandsworth, in the midst of three stations on the South Western and Victoria and Crystal Palace Railways, and within six of the metropolis.—Lot 1. Wandsworth Lodge, an exceedingly comfortable residence, situate in its own delightful grounds, approached from the road by lodge entrance and carriage drives, and containing forteen principal and secondary bed chambers, bed air, entrance hall leading to a spacious and handsome conservatory, dining room, elegant drawing-room, about 25 feet 6 inches by 16 feet 6 inches, breakfast-room, convenient domestic offices, capital detached lofty billiard-room or picture gallery, 56 feet by 26 feet, excellent stabling, including seven loose boxes, double coach house, two chaise houses, and four stall stable; beautiful pleasure grounds and lawns, adorned with very rare and valuable conifers, rhododendrons, and a profusion of flowering evergreens, shrubs, and plants, productive walled kitchen gardens, forcing-houses, vinery, stove, orchid, peaches, and forcing-houses, pine and melon pits, hot water heating apparatus, greenhouses, and conservatories, also gardener's cottage, and lodge, and four cottages adapted for the erection of first class residences and shops, together with the greater portion of the valuable building land adjoining, and forming a most important frontage to the high road. Lots 2, 4, and 4 Three valuable Plots of Freehold Land, close to Lot 1, having together important frontages of 150 feet to the road leading from Wandsworth to Tooting, and frontages of upwards of 150 feet to the proposed new road from Garratt-lane in the rear, extending a considerable distance towards the great portion of the valuable building land for the erection of first class residences and shops, together with the several erections at the rear of the above lots, having together important frontages of upwards of 2,000 feet to the proposed new road, extending a considerable depth, and containing about thirty-one acres. Lots 8. A valuable and extensive plot of Building Land adjoining lots 8 and 9 approached by two proposed new roads, 66 feet wide, containing 11a. 1r. 21p and presenting an unusual opportunity for a profitable building speculation. Lots 14 to 18. Five very valuable plots of Freehold Land, opposite lots 8 and 9, including having important frontages of about 5,400 feet to the roads leading from Clapham to Wandsworth, and containing nearly 21 acres. Lot 19. Three enclosures of valuable Meadow Land, opposite the Garratt road, to which they have a considerable frontage, adjoining in the rear of lot 14, and containing 23a. 0r. 25p.; held upon lease for a term of forty-five years at a rent of £21 per annum. The estate contains a large quantity of gravel and valuable building earth.—May be viewed by cards of 3s., and particulars had at the King's Head, Tooting; Spread Eagle, Wandsworth; Plough, Clapham; of W. LANE, Esq. Solicitor, 4, Bedford place, Russell-square; at the Mart; and of Messrs. NORTON, HOGGART, & TRIST 62, Old Broad-street, Royal Exchange.

HARROW, Middlesex.—Highly important and valuable FREEHOLD ESTATE, close to a station, having a frontage to the high road of nearly a mile, and possessing great advantage for building.

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer for SALE, at the MART, near the Bank of England, on FRIDAY, JULY the 24th, at TWELVE, a very valuable FREEHOLD ESTATE, known as the Dairy Farm, situate close to the Sudbury Station, on the London and North western Railway, four miles from Harrow, and only six from the metropolis; consisting of a comfortable farm cottage, gardens, farm yard, and buildings, and several and entire of principal fine rich dairy and meadow land, in a high state of cultivation, and contains upwards of 127 acres. The property has a most important frontage of nearly a mile in extent to the road leading from London to Harrow. It is beautifully situate, and exceedingly valuable for building purposes, and may be subdivided into convenient lots with very considerable advantage to the vendor. May be viewed, and particulars had of Messrs. DAWES & SON, Angel court, Throgmorton-street; Mr. ROBERT BUSHER, Land Agent, Pinner-green, Middlesex; Mrs. GIBLOWE, Harrow; No. 10, Basinghall-street; at the King's Head, Harrow; the Mart; and of Messrs NORTON, HOGGART, & TRIST 62, Old Broad street, Royal Exchange.

ST. THOMAS'S HOSPITAL, BOROUGH.

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer for SALE, at the MART, on FRIDAY, the 31st day of JULY, at TWELVE o'clock, in lots, the valuable and exceedingly valuable FREEHOLD PROPERTY, lately occupied by St. Thomas's Hospital, situate in Wellington-street, Borough immediately opposite the New street, and adjoining the stations of the South-Eastern and the London and Brighton Railway Companies. It occupies the extraordinary area of nearly four acres, with extensive frontages to Wellington-street, St. Thomas's street, James's street, and to the approaches to the South-Eastern, the London and Brighton Railway Stations, affording facilities with unusually convenient access for shops, warehouses, and first rate dwelling of every description, in the centre of the largest and most increasing traffic in London, but as also immediate junction with the noble warehouses now built and in the course of erection by the river Thames, in Tooley street. It is intended to subdivide the property in lots, the frontages to Wellington-street and to the approaches to the railway stations forming a most important feature in sense, and be admirably adapted for warehouse or large mercantile establishments. The new south wing, a most substantial building, with a considerable frontage to Wellington street, will be offered in one lot, the occupation of the same to be fixed by declaration at the sale. Particulars and plans are preparing, and when ready may be had of HENRY TOOLOOD, Esq. Solicitor, 16, Freemantle-street, S.W.; of Mr. DYE, the Mayor, 2, St. Thomas's street, Southwark; at the Mart; and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad street, Royal Exchange.

DERWENT and CONSETT IRON-WORKS.—These important WORKS, situate near Shotley Bridge, in the county of Durham, now so extended for the manufacture of Crown Patent Iron, and consisting of Blast Furnaces, capable of producing 1,000 tons of pig iron per week, extensive Mills, rolling upwards of 1,000 tons per week of plates, rails, bars, and all descriptions of iron; with valuable Mineral Leases; Collieries, from which a practically unlimited supply of coals may be raised; Coke Ovens, Fire Brick, Cottages, and all appurtenances, the property of the Derwent and Consett Iron Company, limited, will be sold by MESSRS. TUDOR and TUDOR (by direction of the Trustees), and under the sanction of the Court of Chancery, in the Matter of the Act for the Better Protection of Railroad Property.

NATIONAL RIFLE ASSOCIATION. WIMBLEDON MEETING.

MR. NEWBURY BALL will SELL by AUCTION, on WIMBLEDON COMMON, on WEDNESDAY, JULY 22nd, and following days, at TWELVE o'clock, the BUILDING MATERIALS used in erecting and preparing the Common for the above Meeting, consisting of planks, deals, battens, boards, and quarterings, about 250 squares of prepared flooring, about 1,000 feet of 1 inch and 1 inch iron water pipe and connexions, house taps, and urinals, 12 fire poles, together with the several erections at the approaches; the gates, &c.—Catalogues may be had of Mr. CROUCH, Butler, Wimbledon; and at the Auctioneer's Office, High-street, Wandsworth, S.W.

[For remainder of Auctions see p. ix.

BAYNES & DUFFIL, York ; or Mr J. PEASE, Upholsterer, Halifax

COMPETITIONS.

TO ARCHITECTS.—The GUARDIANS of the WEST LONDON UNION, in the City of London, do hereby give notice that they are desirous of receiving, and hereby invite Architects to send in, DESIGNS and PLANS for the ERECTION of a NEW UNION WORKHOUSE upon land at Holloway, in the Parish of St. Mary, Islington. Accommodation will be required for 800 persons, male and female The Guardians will be willing to pay Premiums for three Sets of Plans which shall, in their opinion, best meet their requirements, viz.—for the first, 100l ; for the second, 60l ; and for the third, 40l The three Sets of Premiated Plans are to become the property of the Guardians, who will not bind themselves to adopt either design, but will be at liberty to modify either premiated design in any way they may think proper ; nor will they be bound to employ the Author of either to carry out the work ; but, in the event of his being selected for that purpose, the premium to merge in the Architect's Commission Each Set of Plans must be distinguished by a motto, and accompanied with a sealed envelope, containing the name and address of the Competitor, and having a similar motto to that on the Plan or Design, which envelope will not be opened until after the plans are decided upon. The Plans, and everything intended to be submitted therewith, must be enclosed in a sealed cover, endorsed "Plan for West London Union Workhouse," and addressed to me at my office, 5 St Andrew's-court, Holborn, E.C. and be delivered on or before the 31st day of AUGUST next The Guardians will pay to the Architect selected to carry out the Works, a commission of 5 per cent on the outlay, to include all Plans, Drawings, and Specifications, and all attendances necessary to complete the same, and no charges of extras of any description will be allowed At the time of delivery, except the premiated ones, will be returned, carriage free, on application to me, within a fortnight ; sealed letters unopened ; and no further liability by the Guardians, or others for any premium will be allowed in respect of the Plans received beyond the amount of the Premiums herein set forth. The Guardians give notice that economy of structure will be an important consideration in the selection of Designs ; and should the lowest Tender to be hereafter received for the erection of the Workhouse buildings and premises exceed in amount by 10 per cent the Architects' estimate, they will not be bound to use his Design and Plan, nor to pay any premium for the same.—Plans of the ground, and full particulars and information that may be required, can be had on application at my Office By order of the Board,

JOHN PONTIFEX, Clerk to the Guardians.

5, St. Andrew's-court, Holborn, July, 1863.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of a TAVERN on the Barking-road, at Plaistow, may inspect the plans at the Walmer Castle Tavern, Canning Town, E., on and after TUESDAY, the 21st JULY; and Castle Tavern, Canning Town, E., on and after TUESDAY, the 21st JULY; and further particulars required may be obtained of Mr. J. F. FISHER, Surveyor, Poplar.—Sealed Tenders addressed to A. COLLINS, Esq., to be delivered on or before the 11th day of AUGUST, at FOUR o'clock p.m. The lowest or any Tender not necessarily accepted.

TO BUILDERS, CONTRACTORS, and OTHERS.—The Trustees of the General Charities in the city of Coventry are desirous of CONTRACTING with some person or persons for the ERECTION of a GIRLS' INDUSTRIAL SCHOOL, with matron's house, and the necessary buildings connected therewith, on the site selected for the purpose, situate near to Seaman's-terrace, in the newly-formed Cemetery-road, Coventry; and plans, elevations, and specifications of the intended buildings may be seen at the Office of Mr. THOMAS PRATT, the Architect, in Coventry aforesaid.

The several quantities have been taken out by a competent person appointed by the trustees for that purpose, and which may be had on application to Mr. PRATT, on payment of one guinea, which will be returned to the commencing tenderer. The trustees do not bind themselves to accept the lowest or any other Tender, and the person whose Tender may be accepted will be required to give sufficient security to the satisfaction of the trustees, to the amount of 500l. for the due performance of the contract. The buildings being erected under an order of the Court of Chancery, the accepted Tender, and also the contract, must be subject to the approbation of the Court.—Tenders, sealed up and endorsed, "Tender for Girls' Industrial School," to be delivered at my Office, on or before TUESDAY, the 28th day of JULY instant.

HENRY J. DAVIS, Clerk to the Trust.

Hay-lane, Coventry, July 15, 1863.

BRIDGE over the RIVER WEY, County of Surrey.—Notice is hereby given, on behalf of the Justices of the county of Surrey, that it is proposed to CONSTRUCT a CAST-IRON BRIDGE, of Three Arches, over the River Wey, together with the Approaches thereto, in lieu of a BRIDGE over the Wey and Basingstoke Canal, for the purpose of carrying the highway from Weybridge to Chertsey, in the county aforesaid; and that the plans, working drawings, specification, and conditions of Tender may be seen at the office hereunder mentioned, between the hours of TEN a.m. and FIVE p.m. daily, both days inclusive, on Sundays and working days. Together with printed copies of the specification, conditions, and form of Tender to be delivered at the said office on the 29th day of July instant, and the said Justices will not bind themselves to accept the lowest or any Tender.

WARONZON GRIBBLE, Clerk of the Peace.

Record Office, North street, Lambeth, Surrey, July 16, 1863.

TO BUILDERS. — Persons desirous of TENDERING for BUILDING a New CHURCH at Thorpe next Norwich, are requested to apply to me, in writing, for copies of quantities, on or before the 21st of JULY. The plans and specifications may be inspected at my Offices, on and after FRIDAY, JULY the 24th. Tenders to be delivered by the 5th of AUGUST, 1863. The lowest or any Tender not necessarily accepted.

THOS. JECKELL.

Queen-street, Norwich.

HAILEYBURY COLLEGE WATER-WORKS.—TENDERS WANTED.—The Council of Haileybury College are desirous of receiving TENDERS for the following WORKS required at Haileybury College, viz. the Pumping, Delivering, and Erecting a Horse power Steam-engine and Connexions; a Tubular Boiler and Fittings; a Set of deep Well Pumps and Gearing; also a Cast-iron Tank, capable of holding 1,000 gallons of water and necessary Brickwork for the above works. The plans and specifications will be left for inspection at the Office of Mr. HAIR FORSTER FAIRBANK, C.E. No. 20, Parliament-street, Westminster, from ELEVEN to FOUR o'clock each day, from the 25th inst. to the 30th JULY instant, on which day Tenders should be sent in to the Rev. LEWIS DEEDES, Hon. Secretary, Bramfield Rectory, Hertford, endorsed "Tender for Works, &c." The Council do not undertake to accept the lowest or other Tender. Copies of quantities, &c. can be obtained of the Engineer.

20, Parliament-street, Westminster, 15th July, 1863.

EXTENSION of STAFFORD COUNTY GAOL.—To BUILDERS and CONTRACTORS.—Parties disposed to TENDER for extensive ADDITIONS to the above building, may inspect the plans, specifications, and conditions of contract at my Offices in Stafford, on and after THURSDAY the 16th day of JULY, until SATURDAY, the 1st day of AUGUST. Bills of quantities will be furnished to the Tenderers for such copies, on the payment of two guineas being returned to the parties who supply them for the same. Tenders, sealed and properly endorsed, to be delivered at my Office by TEN o'clock on SATURDAY, the 1st day of AUGUST next. Sureties will be required for the due performance of the contract, but neither the lowest nor any Tender will be accepted unless satisfactory in all respects.

ROBERT GRIFFITHS, Architect and County Surveyor.

Eastgate-street, Stafford, June 24, 1863.

WANTED, DOMESTIC FILTERS.—Persons desirous of supplying the above are invited to send TENDERS to BALDWIN LATHAM, C.E. Waterworks, Ely, Cambridgeshire, on or before the 24th day of JULY, stating price, description, area and thickness of filtering medium, mode of cleansing, quantity of water capable of being passed in 24 hours, together with reference to persons who have the same in use.

Ely, 6th July, 1863.

TO CONTRACTORS, ROADMAKERS, and OTHERS.—TRANMERE IMPROVEMENT ACT, 1862.—The Local Board for the District of Tranmere, as authorized by the above Act, require Tenders for the construction of a MAIN SEWER in the Valley leading by a Wheelstone lane southwards, with the requisite Junctions, Branches, Manholes, Gullies, and Ventilating Shafts; and for the MAKING of a ROAD over the same, being a length of about 1,060 yards. Plans, sections, and specifications, &c., may be seen on application to Mr. W. A. RICHARDSON, C.E. Surveyor to the Local Board, at his Office, Holt-hill, Tranmere, on and after MONDAY 22nd JUNE next, and copies of the specifications and forms of Tender may be obtained on payment of 1l. Sealed Tenders, made on the printed forms only, to be addressed to me, and delivered not later than THURSDAY, 23rd JULY. Contracts and bonds will be prepared by the Law-clerk to the Local Board at the expense of the Contractors. Security will be required for the due performance of the works. The Local Board do not bind themselves to accept the lowest or any Tender.—By order,

GEORGE LLOYD, Law-clerk to the Local Board.

Pull's-cottages, Holt-hill, Tranmere, 20th May, 1863.

TO LIGHTERMEN, CARMEN, and OTHERS.—The Directors of the Charing Cross Gas Company are prepared to receive TENDERS for the LIGHTERAGE and CARTAGE of COALS, in accordance with the amended Specification, printed copies of which may be obtained at the Company's Office, Hungerford road, Westminster. Proposals to be sent in on or before MONDAY, the 27th inst. addressed to me, and endorsed "Tender for Lighterage or Cartage."

By order, JOHN OSWELL PHILLIPS, Secretary.

Hungerford road, Westminster, 15th July, 1863.

METROPOLITAN IMPROVEMENTS.—BUILDING LAND, at Southwark, Mile End, and Kingsland Road (Middlesex).—The Metropolitan Board of Works are prepared to receive TENDERS from parties who may be willing to take, on building leases, certain Plots of Building Ground, respectively in Southwark-street, South Park, in the parish of Saint Mary, Newington; Mile End, and Kingsland, Corner Garden, in the county of Middlesex.

Particulars, conditions, and form of Tender, and every information may be obtained at the surrounding Architect's Office at the Office of the Board, between the hours of NINE a.m. and FOUR p.m.

The Tenders are to be on the printed forms supplied at the Office of the Board, and be delivered under sealed covers, endorsed "Tender for Land, at Southwark, Mile End, Old Town," or "Kingsland," (as the case may be), and addressed to the Clerk of the Board, at the Office of the Metropolitan Board of Works, Spring-gardens, S.W.

The Board do not bind themselves to accept the highest or any Tender.

JOHN POLLARD, Clerk of the Board.

Spring-gardens, Charing Cross, 21st May, 1863.

TO STONEWARE PIPEMAKERS.—The Croydon Local Board are prepared to receive TENDERS from Pipe-makers for STONEWARE PIPES that may be required by them during the year ending Mid-summer, 1864. The Tender to state the lowest price per pipe for pipes delivered within one mile and a quarter of any of the railway stations in the parish, Gipsy-hill, or the Palace, from time to time, as ordered by the engineer.

About 3,000 9 Inch Pipes
" 1,000 12 Inch "
" 2,000 15 Inch "

with junction pipes and bends will be required during the twelve months. The pipes to be best burnt and well glazed stoneware, the thickness to be at least the internal diameter. Payment to be made by one month after delivery for all sound and well-made pipes. Tenders to be delivered at the Office of H. RICHARDS, Esq., High-street, on or before MONDAY, the 27th of JULY, 1863. The Board will not necessarily accept the lowest or any Tender.

Town Hall, Croydon, July 15th, 1863.

HACKNEY SOUP KITCHEN and COTTAGE DWELLING.—Persons desirous of TENDERING for the ERECTION of the above are hereby informed that the specification and drawings may be inspected at the Office of Mr. JAMES BARLOW, F.R.I.B.A., Architect, Eclipse Distillery, N.E. on MONDAY, TUESDAY, and WEDNESDAY next, from TEN a.m. till FOUR p.m. Sealed Tenders to be delivered at the above address, endorsed "Tender for Soup Kitchen." The lowest or any Tender not necessarily accepted.

TO MASONS and PAVIORS.—The Commissioners of Sewers of the City of London will meet in the Guildhall of the said City on TUESDAY, the 21st JULY, 1863, at HALF-PAST TWELVE o'clock precisely, to receive TENDERS for RELAYING the CARRIAGEWAY PAVEMENT of LEADENHALL STREET and MANSION HOUSE STREET and RE-PAVING the FOOTWAYS of FLEET STREET, agreeably to specifications to be seen at this Office. Persons desiring to tender are required to give the names and residences of four two substantial householders as their sureties to enter into bond with the Contractor for the due performance of the Contract. The Commissioners do not pledge themselves to accept the lowest Tender, or any, unless deemed satisfactory; and no Tender will be received after TWELVE o'clock on the day of treaty.

JOSEPH DAW, Principal Clerk.

Sewers' Office, Guildhall, 7th July, 1863.

LLANELLY MAIN DRAINAGE WORKS.—TOWN DIVISION.—The Llanelly Local Board of Health are prepared to receive TENDERS for the EXCAVATION and CONSTRUCTION of about 1,000 yards of Brick Main SEWERS, and 800 yards of BRANCHES, for the drainage of part of the town; also for the Construction of the necessary Street Gullies, Manholes, and other Works connected therewith, in accordance with Plans and Specifications, which may be seen at the Office of Mr. EDWARD RAGG, C.E. engineer to the Board. Sealed Tenders, marked "Drainage Works Contract, No. 4," are requested to be sent in before NINE o'clock on SATURDAY morning, the 25th day of July instant, addressed to the Clerk of the Board. It may be observed that the Board do not pledge themselves to accept the lowest or any of the Tenders.—By order,

Llanelly, July 4, 1863. FRED L. BROWN, Clerk.

ABERDEEN WATERWORKS EXTENSION.—GRAVITATION SUPPLY from CAIRNTON.—The Commissioners under the Aberdeen Police and Waterworks Act, 1862, are prepared to receive TENDERS for CONSTRUCTING and MAINTAINING the required WORKS, consisting of the aqueduct (about twenty miles long) for conveying water from the River Dee at Cairnton to Aberdeen, with the reservoirs, filters, tanks, conduits, hydraulic engine, cast iron pipes, wrought iron tubes, and other appurtenances. The plans and specifications of the works, with general conditions of contract, may be seen at the Commissioners' Office, 50, St Nicholas street, Aberdeen, and sealed Tenders are required to be delivered on or before MONDAY the 10th day of AUGUST next, addressed to "The Commissioners of Police, Aberdeen," marked "Tender for Waterworks." Persons desirous of contracting for a part only of the works, or such portion or portions, section or sections thereof, as are particularly defined and described on the plans and in the specifications and general conditions. The cast and wrought iron work forms one of the sections for which a distinct Tender may be made. The Commissioners do not pledge themselves to accept the lowest Tender or any Tender, unless they consider the same shall be satisfactory in all respects, and the securities approved.

GEORGE MILNE, Clerk of Police.

Aberdeen, 9th July, 1863.

TO SEWER CONTRACTORS and BUILDERS.—The Vestry of the Parish of Chelsea will meet at the Board Room at the Vestry Hall, King's-road, on TUESDAY, the 21st day of JULY next, at THREE o'clock in the afternoon precisely, to receive TENDERS from persons willing to CONTRACT for the CONSTRUCTION, in Arthur street, of about 250 Feet run of BRICK SEWER, 3 feet 9 inches high, 2 feet 6 inches wide, and one brick thick; and other Works; according to a specification and drawing, which may be seen at the Office daily between the hours of TEN and FOUR. Parties tendering must appear personally or the day the Tenders are opened. The expense of the Contract to be paid by the Contractor, upon the execution of the same. Sealed Tenders, signed by the proposed Contractor, with the names and description of two sufficient sureties for the performance of his Contract, are to be left at the said Office before TWELVE o'clock on the said 21st inst. The Vestry do not bind themselves to accept any Tender.—By order,

CHARLES LAHEE, Vestry Clerk.

Vestry Hall, King's-road, Chelsea, July, 1863.

WEST HAM SCHOOLS.—TENDERS are required to be sent to Mr. T. E. KNIGHTLEY, Architect, on or before JULY 24, 1863. Quantities are prepared. 25, Cannon-street, City.

MOUNT PLEASANT WESLEYAN CHAPEL, Thorncliffe, near Sheffield. Builders willing to CONTRACT for the above BUILDING may see the plans and specifications on and after JULY 13th, 1863, at Messrs. NEWTON, CHAMBERS, & Co.'s Coal-office, Midland station, Sheffield. Tenders, sealed and addressed, to be delivered to the Rev. S. H. MORTON, Thorncliffe, on or before 24th inst. The lowest or any of the Tenders not necessarily accepted.

JAMES WILSON, F.S.A. Architect.

No. 1, Belmont, Bath.

TO BUILDERS. — Parties disposed to TENDER for the ERECTION of a DINING and RECREATION HALL and other Works, at the County Asylum, Stafford, may inspect the plans, specifications, and conditions of Contract, at my Offices in Stafford, on and after SATURDAY, the 18th day of JULY, until SATURDAY, the 25th. Bills of quantities will be prepared and furnished at a charge of 1l. 1s. per copy, which will be returned to all parties who submit Tenders for the works. Sealed Tenders, properly endorsed, must be delivered at my Office, by TEN o'clock, a.m. on MONDAY, the 27th of JULY next; but neither the lowest nor any Tender will be necessarily accepted. Security will be required for the due performance of the works.

ROBT. GRIFFITHS, Architect and County Surveyor.

Eastgate-street, Stafford, 30th June, 1863.

TO BUILDERS.—Persons willing to CONTRACT with the Justices of the County of Kent, for the ERECTION of a POLICE STATION, at Chatham, may see the plans and specifications, at the Office of the County Surveyor, Maidstone, any day except Sunday, between the hours of TEN and FIVE. The work to be tendered for agreeably to the form of Tender, to be obtained at the County Surveyor's Office, where sealed Tenders, endorsed "Tender for Chatham Police Station," are to be delivered by NINE o'clock, a.m. on MONDAY, the 27th instant, and persons tendering are to be in attendance at the Courts of Justice, Maidstone, at HALF-PAST TWELVE o'clock on that day.—Neither the lowest nor any other Tender will be accepted unless approved of in all particulars, and security will be required for the proper performance of the Contract.

H. A. WILDES, Clerk of the Peace.

Maidstone, July 10, 1863.

TO CLOCK-MAKERS. — Birkenhead Cemetery.—The Birkenhead Improvement Commissioners are prepared to receive TENDERS for a TURRET CLOCK and BELLS (the specification may be seen at the Commissioners' Offices, 25, Hamilton-square. Sealed Tenders, addressed "The Chairman of the Cemetery Committee, Commissioners' Offices, Birkenhead," to be delivered by NINE o'clock on or before WEDNESDAY, the 29th instant. The Commissioners do not bind themselves to accept the lowest or any Tender.—By order,

AMBROSE WAIN, Clerk to the Commissioners.

Commissioners' Offices, Birkenhead, July 2nd, 1863.

AUSTIN'S IMPERIAL PATENT SASH
and BLIND LINES.

To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Repmakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

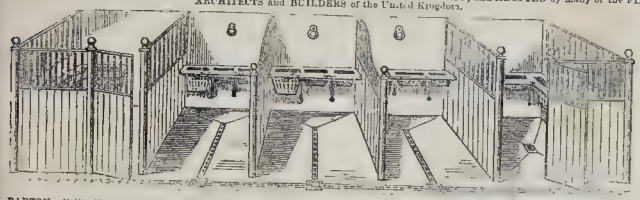
WHOLESALE AND MANUFACTURING IRONMONGERS



38 and 65, York-street, Westminster.

INTERNATIONAL EXHIBITION, 1862.—CLASS 31.—PRIZE MEDAL AWARDED FOR

BARTON'S PATENT STABLE FITTINGS

AND ENAMELLED MANGERS.

These SUPERIOR-CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

J. BARTON solicits attention to his newly-erected PRACTICAL STABLE, now on view at the Manufactory, 370, Oxford street, where an extensive Assortment of all kinds of Stable Furniture, upon the most modern and improved principles, is to be seen.

A new Illustrated Catalogue, with numerous engravings of the improved method of fitting up Stables, forwarded on receipt of four stamps

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

THE PRIZE MEDALS

LONDON, 1851. PARIS, 1855. LONDON, 1862)

Awarded to

COTTAM & COMPANY,

2, WINSLEY STREET, LONDON, W.

For progressive and general improvements in

STABLE FITTINGS AND HARNESS BRACKETS.

Awarded a prize at the Exhibition, Patronized by the English and French Governments, as well as by the Imperial Agricultural Society, and Hunting Establishments in the Kingdom.

In use at Her Majesty's Stables, Aldershott and Balmoral.

COTTAM & COMPANY, Winsley-street, W. are the original Inventors of the PATENT ENAMELLED MANGER, Water-trough, and Wrought-iron Rack, united to an iron top-plate, and forming one complete and useful fixture, having COTTAM'S PATENT screw Hinge Guide and Collar-rein attached, which is taken to the back of the manger, and works with ease and freedom up or down the guide-bar.

COTTAM'S NEW PATENT SEED-BOX, an important addition to the above fittings, being simple in construction, light, and durable, presents a neat appearance, and is economical in its results.

COTTAM'S PATENT PERMANENT ATTACHED DROP COVER, for the above, is a most essential addition to their fittings; it is never in the way; can be placed and replaced in an instant; while its cheapness, simplicity, and utility in keeping the contents of the trough clean, and regulating the quantity to be taken, is quite sufficient to insure its use.

COTTAM'S PATENT SADDLE AND HARNESS BRACKET COMBINED

can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

COTTAM'S IMPROVED WROUGHT IRON VENTILATING BRACKET preserves the shape and allows a free admission of air to the under parts of the saddle.

COTTAM'S IMPROVED SURFACE GUTTER, with perforated moveable cover, the use of which prevents accidents, and can be easily cleaned out.

COTTAM'S CAST-IRON SANITARY TRAP, from its improved construction, gives a full water passage, and does not allow any smell to ascend from the drain.

PATENT LOOSE BOX FITTINGS, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron gates, fencing, hurdles, &c.

Illustrated Catalogues and Estimates gratis, upon application to

COTTAM & CO. 2, WINSLEY STREET, Oxford Street, London, W.

WHERE FULL-SIZED STALLS, LOOSE BOXES, AND HARNESS ROOM, &c. ARE FITTED UP, SHOWING ALL COTTAM'S PATENT IMPROVEMENTS, &c.

COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.

N.B.—WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

BROWN & GREEN'S
PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and the large ones, fitted with Bath and Steam Apparatus, &c. form the most complete appointment for large establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

81, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept 6, 1862.

CAUTION to ARCHITECTS and BUILDERS.—In consequence of complaints arising from the unfaithful use of INFERIOR and SPURIOUS ARTICLES instead of SMITH'S PATENT DOUBLE-ACTION DOOR SPRINGS; SMITH'S PATENT WEATHER-TIGHT WATER BAR; and SMITH'S PATENT WEATHER-TIGHT CASEMENT FASTENING for FRENCH WINDOWS:

The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 69, Princess-street, Leicester-square, London; and SUCH ONLY are WARRANTED.

NAILS and IRONMONGERY, from BIRMINGHAM direct.

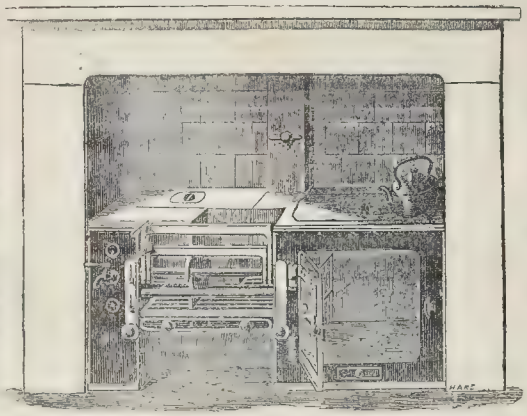
Priced Lists on application.

ESTABLISHED 1846.

Bell-hanging, Railings, and

CUNDY'S PATENT ECONOMIC, BRICK-OVEN, DOUBLE FALL, DOWN-BAR KITCHEN RANGE.

This drawing represents a Range 4 feet long, 2 feet 4 inches high, and 17 in. deep.



The Hob over the top of the Oven forms a HOT PLATE; the fire passes under it and all round the oven, thereby heating it thoroughly and equally all over.

The sliding Hob, which is fastened to the Winding Check, also forms a Hot Plate.

The Oven and Hob can be kept sufficiently hot for the purpose of baking and boiling, with the fire only six inches long.

This Range can be fitted up as a close Kitchener, with Two Ovens, Hot Closets, &c. if required.

This Range, also Cundy's Multum in Parvo Poor Man's Kitchener, also Cundy's Patent ORIGINAL FIRE-BRICK Warm Air Ventilating Stove, suitable for CHURCHES, HALLS, SCHOOLS, and STAIRCASES,

Can be seen in action every day from Nine till Seven, at the Show Rooms of the MANUFACTURER,

WILLIAM ADDIS,

6, 7, and 15, LEICESTER STREET, LEICESTER SQUARE,
WHOLESALE AND RETAIL IRONMONGER, AND STOVE GRATE MANUFACTURER,
Where Mr. CUNDY can be gratuitously consulted relative to the Cure of Smoky Chimneys.
A PROSPECTUS AND REFERENCES WILL BE FORWARDED ON APPLICATION BY LETTER.

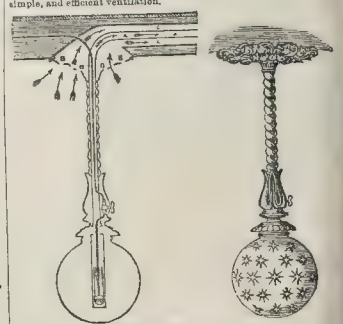
BUILDINGS AND SHIPS EFFECTUALLY SECURED AGAINST LIGHTNING.
PATENT LIGHTNING CONDUCTORS,
according to the system of Sir Snow Harris, F.R.S. as now universally adopted in every department of the Public Service, supplied and carefully fitted in every detail, under the immediate instructions of Sir Snow Harris, by G. W. GRAY, who has effectually secured a large number of ships, public buildings, and magazines against the destructive agency of lightning, including the Houses of Parliament, magazines, afloat and on shore, of the War Department and many churches and other important structures. Buildings surveyed, and plans and estimates submitted, if called for.
J. W. GRAY & SON, 114, Fenchurch-street, E.C.

LIGHTNING CONDUCTORS.
R. S. NEWALL & CO. Patentees of the COPPER ROPE LIGHTNING CONDUCTOR, supply the same, with the point and all staples, complete for fixing, at the following prices:—



Three-eighths-inch diameter	1s. 6d. per foot.
Half-inch diameter	1s. 6d. "
Five-eighths inch diameter	2s 6d. "

R. S. Newall & Co.'s Patent Copper Rope Lightning Conductor is being applied by architects, engineers, and scientific men, in all parts of the world.
Offices—130, Strand, London.
" Gateshead-on-Tyne
" 57, Dale-street, Manchester.
" 98, Anderson-quay, Glasgow.
" 17, South Castle-street, Liverpool
" Exchange-buildings, Dundee.
" 7, Frederick street, Aberdeen.

PROTECTION from LIGHTNING.
HART & SON
Beg to call the attention of Architects, Builders, and the public to their
IMPROVED LIGHTNING CONDUCTORS
(SPRATT'S PATENT),
As presenting the MOST EFFECTIVE MEANS of OBTAINING SECURITY from LIGHTNING. They are economical, easily fixed, and APPLICABLE TO ALL BUILDINGS, including Private Houses, Churches, Chimney-Shafts, Dairies, Powder Magazines, &c. &c.
Price lists and estimates on application.
HART & SON,
WHOLESALE AND MANUFACTURING IRONMONGERS,
53 to 58, WYCH ST. STRAND, LONDON, W.C.

ROBERT MACLAREN & CO.
EGLINTON FOUNDRY, GLASGOW.
Manufacturers of all sizes of CAST-IRON MAIN PIPES, for Gas or Water, by an IMPROVED PATENT.
GENERAL IRON FOUNDERS, GAS ENGINEERS, and WROUGH IRON TUBE MAKERS.

RICKETT'S & HAMMOND'S
VENTILATING GLOBE LIGHT,
combining an agreeable method of lighting, with convenient, simple, and efficient ventilation.

The advantages obtained are these:—
A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.
A COMPLETE DISCHARGE OF HEATED AND VITIATED AIR.
AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.
A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.
5, AGAR STREET STRAND, LONDON W.C.

SAVING IN GAS.
D. HULETT, INVENTOR and PATENTEE. The Mercurial Gas Regulator is the only efficient instrument for insuring wholesome and uniform lighting, equalising the pressure, and preventing any irregularity in the height of the flame.
D. HULETT & CO. 55, High Holborn, London,
Manufacturers of Gas Chandeliers, Glass Lustres, &c. &c.

GEORGE JACKSON AND SONS

(Established in 1750)

Beg the attention of Architects, Builders, Decorators, and the trade in general, to their large assortment of Enrichments for Ceilings and Cornices, in the Gothic, Elizabethan, Italian, Renaissance, Louis XIV XV XVI and many other styles; also for the superb Panel Decorations, Elizabethan and Gothic Dados, Door Caps, Mouldings of all sizes, and to their varied selection of Centre Flowers for Ceilings, Gothic Bosses, Trusses, Column and Pilaster Caps, all executed in the highest style of art.

The large and lengthened experience of GEORGE JACKSON and SONS in decorations of Drawing and Dining Rooms, Libraries, &c. for private houses, or public buildings, many of which they have had the honour of executing under Architects of the highest eminence, enables them with confidence to direct notice to that branch of their business.

Upholsterers are invited to inspect the large variety of Glass Frames, Tables, Cornices, Screens, Candelabra, &c. The large extent of their works, and the recent adoption of steam power and machinery, enable them to offer very superior advantages in materials and speed; while for design, quality, relief, and finish, they flatter themselves they stand unrivalled.

WANTED, a BUILDER'S SPRING CART, stout made.—Direct to GREEN & RING, 23, Baker street.

CROGGON and COMPANY, Manufacturers of PATENT ASPHALTE ROOFING, BOILER, RAILWAY, SHEATHING, and INODOROUS FELT, For Damp Walls, and Lining Iron Houses.

DOWGATE HILL, London; and 2, GOREE PIAZZA, Liverpool.

PATENT ASPHALTIC ROOFING FELT D. ANDERSON & SON, BELFAST

And 23 and 24A, BILLITER STREET, LONDON,

PATENTEES AND MANUFACTURERS OF ASPHALTE ROOFING SHIP SHEATHING, BOILER AND INODOROUS FELTS.

The Builder.

VOL. XXI.—No. 1067.

The Metric System of Weights and Measures; and the Practice of Architecture.

THE Bill for establishing the Metric System of Weights and Measures passed the second reading in the House of Commons under circumstances which would have seemed to foreshadow an enactment to render use of the system compulsory in three, or at most five, years, and to legalize the use in three months; but the Bill will now be withdrawn, and Mr. Ewart will bring in a permissive Bill in the next Session of Parliament. Still, it is necessary for all architects and builders to be prepared for the change which may be soon required in many of their methods of proceeding. Referring to what this preparation would involve, we may note in particular, that all lists of prices will have to be altered, and made to conform to the new standards of measure and weight. "Squaring dimensions" will be acilitated by the substitution of common multi- lication, or that of decimals, for duodecimal or oss multiplication; and the division of areas id solids into twelfths, which is convenient, but variance with the tables of square and bic measure, will cease to be in use. Pos- ly also, it may be found convenient, so far the lists are concerned, to anticipate the cimalisation of the pound sterling, and the troduction of the decimal system into ac- unts; since there is no question that time in timating would be saved, and exactitude in cal- lation gained, by the substitution of decimals the right-hand columns of money of the present stem of bringing items "into bill." According Mr. Brown, the actuary, "it is a common cus- m in all assurance companies to reduce the unds, shillings, and pence columns into decimals a pound, as the only way in which valuations can made within any reasonable time." The Equi- ble Insurance Company, it is stated, have kept eir ledger on the pound and *mil* system for a ndred years. Decimalisation of the coinage, d of accounts, indeed, has secured the advocacy influential persons who have not yet given their hesion to the system of weights and measures ctly as it is in France; but there is a strong ance of testimony in favour of the altera- n in money and that in weights and measures alike desirable, and as the one necessary to the fection and success of the other.

We may also remind professional architects, that wever they may be desirous to change from scales "feet and inches," in drawings, to scales of so ny *centimètres*, or *millimètres*, *per mètre*, there be some little difficulty in their particular e, at first, in judging of dimensions of an actual work, whilst laying aside the foot and its divisions and multiples to which they are habituated. Observations of apparent dimensions in examples, lead to conclusions which are turned to use in practice; and many of these accumulated results of experience, will, under a new system of measures, have to be given up; and materials for new exercise of judgment will have to be acquired by the actual manipulation, constantly, of the measure of length,—till a habit of judging in *mètres*, or divisions of a *mètre*, shall have overcome the force of the old habit.

The difference between the third of a *mètre* and a foot, is little more than one inch; the *mètre* being usually called 39¼ inches, or being exactly 39·37079 inches. The effective introduction of the metric system would require disuse of the term "foot," and the preference of decimetrical division of the *mètre*, to a division into three parts, new feet; but it may be well to mention that three *decimètres*, which are equal to thirty *centimètres*, or to 300 *millimètres*, come up to the length of the present English foot within about three-sixteenths of an inch.

Many of the known dimensions, such as the length of the brick, will have to be learned, and stated when required on drawings, differently. For the very commonly required length which is now "9 inches," we should have to use and speak of 23 *centimètres*, to which 9 inches are nearly equal. The thicknesses of iron, now generally stated in eighths or sixteenths of the inch, will be always described, as indeed they are already by some English machine-makers, and with great advantage as to precision of work, in *centimètres* or *millimètres*.

The chief impediment to the architect's rapidly familiarizing himself with the new system in measures, will arise from the convenience which there now is when making drawings, in dividing a given length, first into halves, then each half into halves, then these quarters each into halves, and so on, precisely as an inch is generally marked divided on a workman's rule. Lord Overstone and others are certainly right in attaching some importance to this method of division as the natural one; though that they are thus furnished with sufficient argument against change in the coinage, we can hardly say. This, however, we must confess to be the result of experience, in France; namely, that an *architect* may have great difficulty in acquiring the habit of division of that coin, the half-franc, which resembles a sixpence in appearance, into five parts, and in overcoming the habit that he had acquired in making drawings and taking measurements, no less than in pecuniary transactions, of repeating the division into halves a second time at least, and having three subdivisions or coins in each resulting quarter of the original length or coin. It is, indeed, admitted by the chief advocates of the new system, that it will be impossible that the natural method of division here spoken of, should not be used, at least to the extent of quartering. This quartering, in the case of the *mètre*, or of any space representing that length in a drawing to scale, however, is simply the obtaining four lengths of 25 *centimètres* each; and there is no difficulty to a draughtsman, in marking accurate halves of each of these, and treating each eighth part of the *mètre* as 25 half-*centimètres* or 125 *millimètres*, as may be convenient. We ought to state, however, that the French have thought fit to discontinue the use of the piece of 25 *centimes*, or the quarter of a *franc*, as not being one of the products of division by 5 or 2; the capability of which division is the characteristic of the decimal system. Argument in favour of a duodecimal system is founded upon there being four divisors. English architectural students pursuing their education in France, find no difficulty with the *mètre;* and the evidence of engineers is to the effect that English workmen fall to it with great readiness. We can at least give our testimony to the fact that the use of the *mètre* becomes soon familiar. It is preferred by ourselves for all measurements and memoranda when travelling on the Continent; and, considering that foreign architectural literature is more prolific of engraved illustrations of buildings than our own, there is on that account argument in favour of the system, to be set against the inconvenience, supposed, of its throwing out of use some English books that have a certain value. French books, we should say, are much cheaper in France, than English books are in England; and whenever the facilities which there are in each country for the transmission within the country, of books and money by post, are made international, as they will be when the present impediments to all transactions, namely the differing weights and systems of accounts, are removed, the entire gain to English architects, whether considered as students, or professional practitioners, will far outweigh the loss, and will be thoroughly appreciated by them. As to letters, the postage between Dover and Calais is rather more than double the rate between Calais and Marseilles; whilst less weight, indeed one quite inadequate, is allowed; and one reason given is the want of harmony between the systems of weights and money in the two countries.

The chief arguments in favour of change to a uniform and rational system of weights and measures, are no. doubt understood by our readers. There are as many as eleven systems of weights in use in this country. The metrical system is actually of the number. Professor Miller, of Cambridge, as quoted in a recent pamphlet by the Rev. John Kerr, says that "our present weights and measures do not interfere with scientific investigations in any way; they are so complicated that it is quite impossible to use them;" and he thinks that "since the year 1830, no chemist has ever made use of any weights that were not decimally divided;" whilst he says with reference to the metric system, that "all chemists use it by preference, and that in our scientific journals weights are almost invariably given in *grammes* and measures in *millimètres*."* Similar evidence is given by Mr. Graham, the Master of the Mint, and to the effect that "scientific men who have considered the subject" and are "in the habit of using the metrical system," regard no other system as ultimately possible. The chemical students of the University of London already calculate in *grammes;* and English scientific books are beginning to quote the metric units.

Not only are the tables of weights and measures, such as are learnt at school, too numerous for recollection, and difficult from the absence of any systematic relation between the parts of each table, but there are many other forms, some of them scarcely discoverable in print, which are peculiar to trades, or to localities. Moreover, the number of parts in a weight or measure, is not the same in all localities. There are several different sizes of acre, besides the size which contains 4,840 square yards; and there are many kinds of roods. "Gauges" which vary with the custom of the trade, are used where the French would state the size exactly by *millimètres*. The hundred-weight may be 100 lb., 112 lb., or 120 lb. A pound may be of several different weights; and of bushels there are a score. As to the measures of liquids, it may be recollected, that when there was much discussion once in the newspapers, as to what constituted a bottle, a quart, and a pint, no precise conclusion could be got to. To say that this state of things is "humiliating" to Englishmen when they have,

* "The Metric System: its Prospects in this Country." By the Rev. John Kerr, M.A., Mathematical Lecturer Free Church Normal College, Glasgow. 8vo. pp. 52. London: Effingham Wilson, 1863.

This pamphlet refers throughout, to the Report and Minutes of Evidence presented to the House of Commons on the 15th July, 1862, by Mr. Ewart's committee. The subject is thoroughly explained in these minutes, in the report of 1857 of the Commission on the Coinage, and in numerous pamphlets of the International Decimal Association. A short paper by Mr. Leone Levi, reprinted from *The Exchange*, "On the Metric System of Weights and Measures," may be here mentioned as useful.

like Mr. Cobden, to arrange a treaty of commerce, or to meet and confer with foreigners, as in the Juries of International Exhibitions, or to state and appreciate facts in whatever kind of pursuit, is representing little of the evil. The reduction from one system of weights and measures to another, involves so much time that it becomes a serious impediment to advancement of every kind; and to all relations, commercially or otherwise, between nations.

Professor Airy, indeed, has said that no power on earth could make a rustic demand three-tenths of a quart of beer, though he will ask easily for a half or a quarter of that measure; but Professor de Morgan has expressed belief that the decimal division of units would coëxist perfectly well with the binary division,—or habit of dividing into halves and quarters, which "must always be used by the common people,"—since the halves and quarters are easily converted into decimals. Professor de Morgan prefers the foot as the unit, considering the *mètre* to be too large and the *decimètre* too small; whilst some foreigners prefer the *mètre* to the foot. The French rustic has no difficulty such as that which is feared by the Astronomer Royal; and "primary education," or that corresponding to what is the business of our "national" and village schools, is in a much lower state in France than in England. The French law, however, allows use of the halves and doubles of all the primary or decimal denominations. Thus, there are weights of 2, 5, 10, 20, and 50 *kilogrammes*, between the *kilogramme* and the *quintal* or 100 *kilogrammes*, instead of only the one weight, the *myriagramme*, of 10 *kilogrammes*; and there are vessels to measure 5 *decilitres*, 2 *decilitres*, and 1 *decilitre*, and 5 *centilitres*, 2 *centilitres*, and 1 *centilitre*.

The metric system, when the value of each unit, the easy nomenclature, and the relation of the prefixes to the unit-terms, are learnt, helps the memory, assists calculation, and so, effects a vast saving of time in education, and in the conduct of all affairs requiring arithmetical calculations. The workman, and even the rustic instanced by Professor Airy, must be benefited by the increased commerce between nations, to a greater degree than he would be injured by change to the decimal system in measures and coinage; and we have yet to learn that he would be even inconvenienced much. One of the greatest hinderances to education comes from the early period at which children are removed from school; and, although it has been argued in the House of Commons that the present system of weights and measures is worth preserving because it exercises the faculties, we apprehend these might be better exercised by attention to something else in the "two years at least" which it is in evidence would be gained in the education of boys. The aptitude of the French for arithmetical calculations must strike every Englishman who is at all observant when on the Continent. He is perhaps most struck with the difference there is in that respect between the women of the two countries. Not only as to *cafés* and *restaurants* universally, but as to trades generally, and even frequently as to the learned professions, it may be said that the accounts are kept by women; and *the sex* in France, loses no charm or grace by this particular way of doing something. Of the order and regularity that might come to be the characteristic of the English home, merely by the adoption of the French system of accounts, we could say much.

The retention of the name *sou*, in common use in France, for the piece of 5 *centimes*, however, is the source of difficulty to Englishmen; as the price of an article which would be, say, 1 *franc* 25 *centimes*, will be frequently stated as 25 *sous*; or worse, as 1 *franc* 5 *sous*: so that, in fact, one or two systems not corresponding with that of the account, are found to be prevalent. The difficulty is caused rather by the efforts, generally ill-judged, at explanation to foreigners, than by any defects that would be felt in the decimal and metric system as it could be introduced, and as we believe it would be accepted, in this country. And although in France, some old names of weights and measures, as *livre*, *chopine*, and *demi-sétier*, may be written and spoken of, the weight or quantity of the article, as wax-candles or wine, is, we believe, the new weight or quantity, that is what has its place in the metrical scale, and not the old weight or quantity. The difficulty, however, which there is for Englishmen, is simply a warning as to the nomenclature which should be now adopted, and as to the desirableness of availing ourselves of all means of explaining the system by diagrams and models such as were exhibited last year in the building at Brompton, and have been found of great service in other countries, educationally.

In the Bill lately printed, it seemed proposed to retain the terms "yard," "quart," and "pound," and perhaps some others, with the prefix "new" or "decimal." We are afraid that any retention of old names, for weights or measures which are entirely different, would be an error. The Dutch tried that course; and they now confess it would have been better to introduce the French nomenclature. By the way, however, in which they went to work educationally, they succeeded in quickly introducing the system; whereupon all confessed the change to be most beneficial. It would be disgraceful should the British nation, convinced of an advantage in its commerce, in its foreign relations, and in its future progress resulting from education, be incapable of achieving the same work. To hesitate for the supposed benefit of a section, the most ignorant, of the community, would surely be opposed to the principle of every line of action by which progression accrues. And no prejudice against a thing or a term as being French, should be allowed to stand in the way of our reaping the advantages of the metric system, in their entirety. Neither should there be any prejudice against the system as the growth of the Revolutionary period in France.

There is one period that preceded the excesses of the Revolution, to which discerning men in either country can look back with satisfaction. During that time, the French Constituent Assembly desired the King to endeavour to obtain the co-operation of the Royal Society with the *Académie des Sciences* in an investigation with a view to improvement in weights and measures; and we have seen a pamphlet in the library of the Patent Office in Southampton-buildings, with the date 1790, which gives certain speeches in the House of Commons that appear to urge strongly the acceptance of the proposal. The same cause, namely the war, which has deprived this insular country of many things now recognized as advantages, kept from us the benefit of the metrical system. It is true indeed that the first Emperor did not favour that system, so far at least as that he allowed the *système usuel* to exist beside it. But now, or since 1840, when the old law of the republic, restored in 1837, came into new operation, and any other system became illegal, the metrical system has got into general use. Any difficulty to which we have referred, as encountered, has doubtless arisen in great part from the state of the law under the first Napoleon.

The Bill lately before the House of Commons, should be remodelled next Session, so far as leaving out all terms which may be mistaken for those of old measures or weights. As to the unit of land measure, the French *are*, or one hundred square *mètres*, it should be called *are* notwithstanding similarity to "acre," or certainly not *hectare*, which is the French term for one hundred ares.

It has been said by Mr. Dickson, a Scotch gentleman, who has been resident and engaged for thirty years in manufactures at Dunkirk, and who ascribes his early success to his use of a measure having a clear and definite meaning,—

> "The *marchands*, as we call them, are people who very often can scarcely sign their names. Many of them have really no education whatever; yet they get on remarkably well with the metrical system: it is so simple. There is nothing so difficult to a man (in France or Belgium) with half or quarter of an education, as to take an invoice of 10 tons 7 cwt. 3 qrs. 18 lb. at 25s. 11d. the cwt. There is a whole calculation to go through, and they cannot manage it."

Yet the *Times*, writing after the debate on the second reading of the Bill, can speak of the physical impossibility of the Englishman's learning things so fast, and forgetting them so fast, as may one accustomed to revolutions, earthquakes, and wars; and can ask "on behalf of the already overworked and not very quick wits of our countrymen," what will become of the "many village shopkeepers who cannot even write, and who can only just do the little mental arithmetic which suffices for a ready-money transaction, or a few hieroglyphics on a suspended slate." The arguments used as against the change, are plainly arguments the strongest for it. Surely, far from a "trial" being "impending over this free and happy country," and a change being "threatened," which would fill every "household" with "perplexity, confusion, and shame," the "small housekeepers" and other "poor creatures," will be better able to manage arithmetic, and will be benefited in every way. "It is of no use to urge," &c., is a style of writing which a leading journal would make short work with, were such reasoning proffered in other columns. It has been shown that neither "a hundred" English measures, nor a tenth of that number, are what the *Times* calls "familiar" to the Englishman; and when the same journal asks,—"What are France, the Zollverein, and Portugal to us?" the simple reply is, they are countries using the metrical system; and the trade of the United Kingdom with such countries, greatly exceeds the trade with countries using the English system, and is only waiting removal of such restrictions as those which have been adverted to, to be largely increased.

Since our article was written, a letter has appeared in the *Times* deprecating the proposed change, by arguments deduced from the writer's experience, of nearly a quarter of a century ago; but to which we are willing to attach a certain importance. In some of his statements, indeed, such as the assertion that the present Bill deals with the coinage, he is incorrect; and he does not seem to see that distances of longitude or latitude are not reckoned in *kilomètres*, simply because they cannot be so reckoned. A degree of longitude at the Arctic circle is very many *kilomètres* less than a degree at the equator. As to the division of quantities of goods, by halving, quartering, and so on, leading in transactions to a nominal half-*centime*, which has no place in accounts; it may be answered that there is the same want of a division of the farthing in the English system, and that the butcher or draper takes care to have the whole farthing. Where the principal silver coin is divisible into 100 copper pieces, there must be advantage to the poor which there is not where the similar coin (of greater value, moreover, than the *franc*) is divisible into 48 pieces only. It may be the French system of *francs* and *centimes* would not be the best model for our decimalization of the coinage: it may be even that the 25-*centime* piece should have been retained in France, or that a half-*centime* would be desirable: these are points which space will not allow us to discuss; though we should be not indisposed to consider them. Some of the points however have been foreseen in our article; and we have written with an appreciation of them derived from a knowledge of the circumstances, which perhaps equals that of the writer in the *Times*, and comes up to a considerably later date.

The argument in favour of a system to allow of the greatest number of successive halvings, would come to show an imperfection in the Arabic numeration, which system could hardly now be changed. For example, in seeking for a binary arrangement of measures, and for one of money in harmony with it, we should require a perfect duodecimal system in accounts, which would involve two additional numerals. This is pointed out in a report from the French "Société Impériale d'Emulation d'Abbeville," dated 22nd November, 1855, and addressed to Mr. Yates, in whose "Narrative of the Origin and Formation of the International Association for obtaining a Uniform Decimal System of Measures, Weights, and Coins" (London, 1856) we find a translation, including the following words:—

> "But, in order that this method [duodecimal numeration], might be acceptable and complete, it would have been necessary to add two characters to the ciphers in common use; and supposing that the new series have been 1, 2, 3, 4, 5, 6, 7, 8, 9, α, β, and 0; α representing ten, and β representing eleven; both become single numbers; twelve would be written 10; thirteen would be 11; twenty would be 24, or twice twelve; and 100 would be represented by 144, or twelve times twelve, that is to say, the first series multiplied by itself; so that a century would no longer be a hundred years, but 144 years, expressed in a different manner. From this, one may imagine the difficulties and perturbations which would have arisen from such a theory."

The wording is not quite perspicuous; but by writing down a few figures, the conclusion will be arrived at easily enough. The Arabic numeration must be preserved, for the convenience of "the rustic" helping himself in arithmetic by his fingers, and for that of many better people likewise.

After all that has been said to mitigate any objections of our profession to the change proposed, or rather to prove to them the advantages, little need be added. We have taken our readers to be acquainted with the fact that the *mètre*, or ten-millionth part of the distance from the pole to the equator along the arc of the meridian, measured by Delambre and Mechain, under the direction of Laplace, Lagrange, Monge, Borda, and Condorcet, is at the same time the unit of length, and the foundation for all the French measurements of distance, superficies, volume and capacity, and weight; and to know that the money system has such relation to it that certain coins might be used in place of weights, — angles and circumferences, and time, however being measured as with ourselves. We have also taken them to be acquainted with the system of pr

fixes from the Latin, which signify a tenth, a hundredth, and a thousandth part of the unit, and prefixes from the Greek signifying ten times, a hundred times, a thousand times, and ten thousand times; and to know that the same form of prefix is used whether the unit be *mètre, litre,* or *gramme,* and the measure one of length, capacity as in the case of liquids, or weight; also to be familiar with the notation; and with the measure of superficies, where in the order of progressing magnitude, the multiplier is 100 instead of 10; and with the solid measure in which the multiplier is 1000.* Also we have supposed our readers to remember that in the measure of land, the square *mètre* may be called *centiare,* the square *decamètre* being taken as the unit and called *are*; whilst the *decare* is ten ares; and the *hectare,* one hundred ares. That is to say, each denomination is one hundred times the one preceding it. We have further supposed them to recollect that each of the terms in the table of measures of capacity, or for liquids, *millilitre, centilitre, decilitre, litre, decalitre, hectolitre, kilolitre,* and *myrialitre*; and those similarly in the table of measures of weight, *milligramme, centigramme, decigramme, gramme, decagramme, hectogramme, kilogramme, myriagramme, quintal,* and *millier,* is equal to ten times the measure preceding it. An explanation of the metrical system was given in our pages some years ago, when the system probably was much less understood than it is at present. Should tabulated information appear to be required shortly, for reference, or to familiarize the profession thoroughly with the system, and preclude difficulty of whatever kind, we shall endeavour to supply it. Meanwhile it may be well to note the exact values of the unit of the measure of capacity and the unit of the measure of weight, the relation of these two measures to that of length, and the relation of each measure to the others.

The *litre,* the unit for measures of capacity for liquids and grain, is precisely equal to a *cubic decimètre,*—the measure-vessel, however, being cylindrical or any other convenient form; and the *millilitre, litre,* and *kilolitre,* are equal to the cubes of three consecutive units of the linear table. The *gramme* is the weight of a cubic *centimètre* of distilled water at 4° Centigrade; whilst the *milligramme, gramme, kilogramme,* and *millier,* are the weights of four volumes of water which are equal to the cubes of four consecutive units of the linear table. The *milligramme* is the weight of a cubic *millimètre* of water; the *gramme* is what has been just now given; the *kilogramme,* or weight of one thousand *grammes,* is the weight of a *litre* or cubic *decimètre* of water; and the *millier,* or French ton, of one thousand *kilogrammes,* is the weight of a *kilolitre* or cubic *mètre* of water. The *franc,* of silver of a specified fineness, namely, nine parts of pure silver to one of alloy, weighs five *grammes*; the piece of 20 *centimes* is 1 *gramme,* and the other silver pieces observe the same proportion and relation. The decimal and metric system in accounts, may be considered as a means of performing the whole of reduction, by simply changing the position of decimal points, and of dispensing altogether with compound addition, compound subtraction, compound multiplication, and compound division.

The great advantages arising from the relation between the weights, and the measures of length, surface, and capacity, in the Metric System, were explained in the memorial to the Chancellor of the Exchequer, presented on the 19th of March, 1859, by the International Association.

"In the metrical system, the cubes of the mètre, the decimètre, and the centimètre, filled with water, give the ton, the kilogramme, and the gramme. The immediate consequence is, that the cubic contents of any body whether solid or fluid, or of any quantity of goods, expressed in mètres, and multiplied by the specific gravity of the sub-tance, whatever it may be, give its weight in tons. Also its specific gravity may in general be found almost instantaneously, because it is a litre or cubic decimètre, of the same substance weighed in kilogrammes."

This is so great an advantage in all pursuits connected with architecture and building, that according to the memorial, English engineers who understand the Metric System, sometimes translate their data into the terms of that system in order to perform their calculations, and translate the results back again into the English weights and measures for the convenience of their employers. The advantages may be conveniently explained by analogous cases, beyond the ordinary duties of our profession.

"Suppose a farmer wishes to know the value of his stack of hay, and that he applies the metrical system. He takes its length, breadth, and thickness in mètres, and by simple calculation ascertains its contents in cubic mètres. He then multiplies this sum by the weight of the hay compared with water, and he has at once the number of metrical tons by weight."

The difference between the English ton and the metric ton happens to be only about 1½ per cent. The English ton is 1015·65 *kilogrammes*: the metrical ton being 1,000 *kilogrammes.*

The tonnage of ships, or capacity for cargo, notwithstanding attempts to determine it by Parliamentary enactment, is still unsettled. The "tonnage" as calculated by law, is not tonnage at all. There should be some method of estimation which could be common to all nations.

"This can only be done by the application of the Metrical System, and with that it presents no difficulty. Take any ship, either a sailing vessel or a steamer. Let her be equipped for sea, but without cargo. In this state of things let the light-water and load-water lines be ascertained; and the number of cubic mètres interposed between these lines will be the tonnage of the ship; and it may be computed with exactness and the greatest ease."

Every case in which it is necessary for the architect or engineer to compute weight from measurements, will be facilitated in the solution of the problem by the use of the metric system. According to one witness, "if engineers did not adopt the decimal system, they would be obliged to give up their profession." The levelling-staff, and the surveyor's chain, with the relation of the square of the chain to the acre, are in the spirit of the system. As to the value of that system if adopted generally by engineers, Mr. J. B. Smith, M.P., has given evidence in the following words:—"Mr. Locke, the eminent engineer, told me that he had a number of railways to make in France, and that he found the French metrical system so superior to the English, that in all his subsequent works in England he worked all his calculations upon the metrical system, and afterwards converted them into English." Evidence is also given as to the adoption of the metric system by Mr. Whitworth and others, in machine-making; whilst Mr. Fairbairn thinks that "independently of any legislation on the subject, the decimal system will ultimately get into all mechanical operations, from being much more convenient and giving greater facilities for calculation," and that "the French decimal system, of all others, is the best." Of evidence of the advantages of the one system, and the disadvantages of the other, we have abundance. That of Professor Miller, in favour of the *kilogramme* and its subdivisions, and the *mètre* and its subdivisions, on the score of convenience as compared with the pound and yard and their subdivisions, is noteworthy, as he constructed the present standard pound. The saving of time to such a company as that of the London and North-Western Railway, from the different system in their accounts, has been computed at 10,000*l.* per annum.

There is one matter to which attention should be at once directed, namely, the procuring an accurate copy of the platinum standard *mètre* of 1799, which, according to the "Annuaire" of the "Bureau des Longitudes," is preserved in Paris in the Hôtel des Archives. Divisions of the *mètre* which are engraved on an English rule that bears the name of one of the best known London makers, have been compared with the *mètre* which is placed for general reference on one of the buildings in the Rue de Vaugirard, appertaining to the Palace of the Senate, in the French metropolis; and a difference which would amount to a *centimètre* or thereabouts, in the *mètre,* has been found to exist. M. César Daly, who on one occasion assisted the writer of this article in a comparison, stated at the time, that he had previously discovered a similar defect in a rule of another, an equally celebrated, English maker; and that the defect had occasioned him serious inconvenience. Nevertheless, in a subsequent comparison of the rule with *mètres* in the late Exhibition, the difference appeared to be less, if any. Is it possible that there are different standards used by rule-makers? The International Association might do well to ascertain in time, exactly how the matter is; although the French Government will doubtless render every assistance to the department of Weights and Measures proposed to be established in connexion with the Board of Trade.

We are anxious to see the French system legalised, and brought into general use with as little delay as possible; and to that end, the nomenclature must be such as will prevent all confusion between the present weights and measures and those of the new system, and be most convenient in the dealings and communications between people of the two countries, or rather between this country and the countries generally that have adopted the metric system. The change is certain of the approval of our profession; but there will be work to be done in preparing for the change, and especially in the alteration of builders' prices, and of any published lists on which reliance is placed. All the city companies and trades' unions should go to work, using the best means for diffusing information respecting the system and the application of it.

ROYAL MASONIC INSTITUTION FOR BOYS: COMPETITION.

THE present school-house accommodation being insufficient, the committee have determined to erect a new and commodious building, where a hundred boys may be trained and educated to fit them to perform the duties of life.

In May last they offered three premiums, 70*l.*, 50*l.*, and 30*l.*, and invited architects to submit designs in competition. In response, about thirty sets were sent in, mostly good, creditable productions; and these have been exhibited during the week in Freemasons' Hall, Great Queen-street. Each set of designs had ample space, and the whole arrangement was satisfactory.

The requirements include a school-room, comprising an area of about 1,100 feet superficial; two class-rooms, comprising an area of not less than 300 feet superficial each; a dining-room, capable of dining 100 boys at least; a committee-room, comprising an area of not less than 400 feet superficial; dormitories to contain from 100 to 110 beds; an infirmary, to contain not less than 10 beds in addition to those above mentioned, and all the necessary offices for conducting such an establishment; an underground tank for the rain water, to contain not less than 3,000 gallons, and an underground manure-tank, to contain not less than 4,000 gallons. The engineers' work comprises patent heating apparatus to oven; Stevens's patent bread machinery; the cooking apparatus for the kitchen and other departments generally, including the heating-apparatus for the baths, drying-room, &c., also the apparatus for heating the corridors, passages, and staircases with hot-water pipes or otherwise; the lighting of the establishment with gas, including the requisite pipes, meter, burners, &c., complete; an ample water supply, with the various tanks, cisterns, pipes, cocks, &c., throughout; the services to the sinks, water-closets, and urinals; and a perfect system of drainage communicating with the main service.

The "Instructions" went into more minute particulars than usual, and the problem left to the competitors to solve was not very difficult. The Instructions say,—

"The following character of construction is expected to be carried out, viz. —

All the walls are to be built with hard, square, and well-burnt bricks on proper footings, with the same number of off-sets on each side as there are half bricks in the thickness of the walls: the several footings are to be built on a uniform footing without stepping; the lower course of the footings to be two courses high, and not less than 4 feet 6 inches below the surface of the ground-floor line: the off-sets above are to be one course high each. All the walls throughout are to have a foundation of concrete 2 feet deep below the footings, and 6 inches wider on each side than the lower course of the footings: two courses of slates are to be cut to the width of the upper course of the footings, and bedded in pure cement thereon. The principal front (which is to be of a plain, handsome character, without meretricious ornament), is to be faced with white Suffolk bricks, and to have either Bolsover or Tisbey stone dressings and finishings. The external facings of the flank and rear elevations are to be faced with picked stocks of a bright and uniform colour, with a neat flat joint and jointed, having gauged arches to the several openings. The roofs are to be covered with the best Bangor slates, having 3-inch lap, fastened with two stout copper nails to each slate. Wherever lead gutters, valleys, or flats occur, they are to be covered with 7 lb. to the foot superficial: the hips and ridges are to be covered with lead 6 lb. to the foot superficial: the flashings to the gutters, gables, chimneys, &c., and the aprons throughout, are to be of lead 5 lb. to the foot superficial: the eaves, gutters (if any), and the several rain-water pipes, are to be of cast iron of ample sizes. All the fir timber and deals are to be of the best Baltic, the oak to be of English growth, and the several roofs are to be constructed to exclude heat and cold as much as possible."

The amount of expenditure named was 8,000*l.*, but we are told this was not made a stipulation. If it were, our observations should have a different tone.

* 2697·502 *mètres* would be read 2697 mètres, 502 millimètres; and it might be written 2 kilomètres, 6 hectomètres, 9 decamètres, 7 mètres, 5 decimètres, 2 millimètres; the centimètre's place of figures here having a nought. 2697·502 *square-mètres* would represent an area equal to 26 square decamètres, 97 square mètres, 50 square decimètres, 20 square centimètres. 2697·502 *cubic-mètres* would represent 2 cubic decamètres, 697 cubic mètres, 502 cubic decimètres. The division into one, two, or three figures, always starts left and right from the decimal point. This illustration shows how readily as compared with ordinary arithmetic, reduction is effected. Not all the prefixes, actually, are used in common speaking, and some of the terms are abbreviated, as "kilogrammes" into "kilos." There is a solid measure used for firewood, in which the cubic mètre is called *stère,* and there is a *décastère* equal to ten *stères,* as well as a *décistère* equal to one-tenth of a stère.

Foremost amongst the designs which attract attention is the set marked "*L'Union fait la Force*," though we cannot praise the author for adopting the motto of the successful design for the new Freemasons' Hall. The apartments are disposed round a large open court, with plunge bath in centre. The style adopted is free Gothic: the openings have semi-circular arches, with pointed labels above them. A lofty bell spiret, on the roof of the central building, has a top-heavy effect in the drawing, but would be less so in execution. The plan seems a very good one. The dormitories are continuous. Although perfectly plain and simple, the external appearance is effective and characteristic. The set marked "Let it be done well," would seem, if we may judge from circumstances, to have some special friends amongst the craft. The style adopted is very violent Elizabethan, with orders of pilasters, story above story;—in the centre no fewer than five. The ground plan is defective, inasmuch as the corridors would be dark, and some of the rooms depend for light on a small court. The bedroom plans, four dormitories around central staircase, are cleverly managed. The cost would probably be nearly double the sum named by the committee. "Faith" has an ordinary Italian elevation, open to criticism, especially in respect to the arrangement of windows and string-courses. The objection to be urged to the plan is, that the kitchens are so far from the dining-rooms that the inconvenience would be too great to be put up with. "*In hoc signo vincimus*," with red and blue interlaced triangle, is a very good design; style, Domestic Gothic, with tower. Long dormitories provide respectively for forty beds and thirty beds each. "Knowledge is Power" marks a clever elevation, Gothic in style; and a thoughtful plan,—spread out. "*Integritas*" has considerable claims on attention; the elevation is handsome, free Gothic in style, and the plan is compact. The corridors, however, as in too many of the designs, would be dark, and the windows in the dormitory would not ventilate the upper part of it. "Faith" must be described, both in respect of plan and elevation (red brick and stone), as "disorderly." "*In veritate Victoria*" has some good points in the plan, and the author of it has done what cannot be said of others more likely in consequence to stand first, viz, restricted himself to the sum named. "Utility" is an artist-like design, too suggestive of the asylum at Snaresbrook. The design marked "*Tria Juncta in Uno*" has considerable merit; and "Exemplar" should certainly stand amongst the best six; the plan being very good. The two finished elevations, Tudor and Roman, are commonplace, but one of the alternative sketches would make a handsome building.

Since these notes were written the committee have named the six following designs, from which the ultimate selection will be made:—"*Integritas*," "*L'Union fait la Force*," "Faith," "Let it be done well," "Knowledge is Power," "Veritas."

The foundation-stone is to be laid with a *fête* and festival, on Saturday, the 8th of August. The day was fixed, in fact, before the designs were sent in. The institution is situate at Wood-green, near Tottenham.

GLEANINGS FROM WESTMINSTER ABBEY.*

IT would have been well if the elaborate papers supplementing Mr. Scott's "Gleanings," had been published separately. As it is, those who already possess Mr. Scott's share of the work as published in the first edition, and desire to obtain the additional information contained in this second edition, can only do so by purchasing another copy of the "Gleanings." There is, perhaps, yet time to issue a certain number of copies of the supplemental papers separately, so that purchasers of the first edition may avail themselves of them. The papers to which we allude are those on the Metal Work, the Mosaic Pavements, the Retabulum, the Sedilia, the Coronation Chair, the Shrine, and the Tombs: they are the contributions of Mr. W. Burges.

The claret-coloured octavo before us is an instance of the fruitfulness of good seed planted in genial soil. When Mr. Scott read the germ of the present work in the form of a paper to a meeting of the London and Middlesex Archæological Society, he expressed a wish that the subject would be elaborated by writers whose time was not so fully occupied as his own. This suggestion was immediately responded to by one of his hearers, Mr. J. H. Parker, who proposed to publish the "Gleanings," with illustrations, together with all the additional details he could obtain. The present edition better fulfils the conditions proposed than the first, being, as we have seen, so materially enlarged.

The account rolls, those clues with which so much history is unravelled, have added another much to the story of Dick Whittington, Lord Mayor of London. The wealthy merchant, it seems, possessed, besides commercial abilities, a cultivated taste. There is a minute of the council at the tower of London, dated 27th May, 3rd Henry V., brought forward by his biographer, the Rev. S. Lysons, as an authority for this assumption:—"Item que le dit maire ne face rien en la dite citée touchant la demolicion d'aucuns lieu ou murs en la dite citée sans l'avis de Whittington,"—nothing was to be touched without the advice of our old friend and favourite. Taken in connexion with this entry, it appears tolerably certain that the Richard Whityngton to whom a commission was issued, in conjunction with Richard Harowden, a monk of the Abbey, to rebuild the nave in the reign of the same monarch, was the identical Richard. This is a most interesting conjecture. Some of the accounts of these commissioners are extant. They show an expenditure of upwards of 93*l.* over the receipts, which amounted to 1,397*l.* 6s. 8d. The works lasted over a period of three years 1 quarter and 83 days. Thirty-two workmen are mentioned as receiving wages.

There are five examples of metal-work remaining in the Abbey church which have especial value. These are the grille at the top of the tomb of Queen Eleanor (only lately reinstated by Mr. Scott, after a long seclusion in an out-of-the-way corner); the railing round Archbishop Langham's effigy; that at the west end of the chantry of Henry V.; the brass or copper gates of Henry VII.'s chapel; and the beautiful brass grille round the tomb of the latter king. Queen Eleanor's grille was made by Thomas de Leghton for 12*l.*, with a further charge of 20s. for the carriage of it up to London, and his own and assistants' expenses whilst fixing it. The metal-work that protected the tomb of Queen Philippa, that "most gentyll quene" of Edward III., had previously kept guard round the tomb of a bishop in St. Paul's Cathedral; this and the railing of Edward I.'s are, however, lost to us. In 1822 the Dean and Chapter ordered the removal of most of the railings around the tombs; although some of the metal-work then taken down has been discovered in the re-vestry: it is to be feared that much is irrecoverable. For views of the tombs before this disjunction, see "Ackerman's" or "Neale's History."

Travellers are wont to associate mosaic work exclusively with Italian reminiscences: but the fine example possessed by Westminster needs but to be seen to be appreciated. It is a pavement of *opus Alexandrinum*, on the altar platform, made by a Roman artist for Abbot Ware, *circa* 1268. An inscription on the pavement says:—"Odericus et Abbas hos compegere porphyreos lapides." But for three peculiarities indicated by Mr. Burges, it might be supposed that Abbot Ware had brought this present for his church from Rome in its finished state; but an examination will show that the Italian ground for mosaics, cippolino, not being obtainable in his country, Purbeck was substituted; that legends in brass letters were inserted in the Purbeck borders; and that glass was introduced: facts which show conclusively that it was of Northern workmanship. Among the sums paid by the executors of Queen Eleanor was an account of sixty shillings to William le Favour "pro pavimento faciendo in Ecclesia West." This, it is conjectured, relates to the mosaic pavement in the chapel of Edward the Confessor. This work is of a different character to the true *opus Alexandrinum*, and may be well referred to an English workman's endeavour to produce a similar decoration in a fashion of his own.

The finding of the retabulum by Mr. Blore was one of those lucky circumstances which cannot be expected to occur twice in a life-time. It was lying on the top of the effigy cases in the upper chapel of Abbot Islip. It is a rich specimen of thirteenth-century workmanship; so rich, indeed, that it can hardly be supposed to have occupied a less conspicuous position than that of a retabulum to the high altar, a supposition which is borne out by the fact that its dimensions correspond with the plain space left at the back of the altar. It is 10 feet 11 inches long, by 3 feet 1 inch, and is divided into five compartments. The centre and two ends contain full-length figures in canopied niches; the compartments on either side of the centre, between it and the ends, contain four subjects, divided from one another by a geometrical device. The whole is richly ornamented with gilding, imitation enamels, false jewels, and glass. The mode in which the manufacturers of this superb piece of decoration went to work is supposed to be this: a panelled tablet was first made, upon which all the projections were fixed by pins and glue. The joints of the projecting work were covered with strips of vellum fixed on with glue. The whole surface then received a coating of whitening and size, called "gesso." Upon this followed the paintings and their gilded backgrounds. The reticulated pattern of the gilding was made by scratching the gesso ground before it was quite dry. In the columns of the architectural part of the decorations the pattern was worked on them, after they were gilded and burnished, in a body-colour so thick as to stand up from the surface. A third kind of pattern was made by a leaden or wooden stamp, engraved like a seal, applied to the gesso whilst it was wet. The imitation enamels were produced by means of tempera on the gesso with a covering of glass. There is another variety of glass-work, formed of red and blue glass cut into small pieces and joined together by means of putty. The red pieces are hexagonal, and have a gilded lion upon them: these, placed side by side, and in rows, leave a small interstice into which small square pieces of blue are inserted. This decoration forms the background of the centre compartment.

The sedilia in Westminster are more than usually curious, from the fact that they are made of wood. They have suffered much since Sir J. Ayliffe availed himself of an opportunity to have them and the tomb of Avelina, Countess of Lancaster, drawn for the *Vetusta Monumenta* in 1778. There are four of them: but no trace is found of a piscina. They appear to have been elaborately decorated by processes similar to that which beautified the retabulum.

Of the coronation chair we lately gave some particulars.* But to these Mr. Burges has made an addition. He believes that the chair was ornamented with painting, gilding, glass, jewels, and enamels, in a similar mode as were the sedilia and retabulum. The gilding of the chair was effected by a process not hitherto detected. After the usual "gesso" was applied, and the gold laid on by means of white of egg, and the ground thus formed was still elastic, a blunt instrument was used to prick out the pattern. The traces of these decorations are so faint that no one has taken the trouble to decipher them; deeming it, perhaps, an impossibility. However, by the aid of a dark lantern and a strong lens, they have been made out by Mr. Tracey, who furnished the drawings for three of the woodcuts illustrating the chair. At the back of the chair are traces which lead up to the inference that there was a representation of a king there, seated on a cushion diapered with lozenges, with his feet resting on a lion. On the dexter side are traces of birds and foliage;—on the sinister a diaper of compound quatrefoils with a different subject, such as a knight, a monster, a bird, foliage, in each quatrefoil.

It is thought likely that the base of the shrine of Edward the Confessor has never been disturbed. We know the body of the Confessor was removed, and has since been re-deposited in its place; but there is nothing to show that the base of the shrine has been in any way altered. There are the three niches in it in which sick people were left all night to be miraculously cured; and there is the mosaic work made by Peter the Roman citizen, whom Abbot Ware employed. The body of the Confessor, like that of St. Cuthbert, was believed to be uncorrupted for many years after his death. Henry II., Thomas à Becket, Henry III., Edward I., and Queen Eleanor, all vied in doing him honour. Matthew Paris mentions that Henry III. transferred his remains to a shrine of gold, and was himself buried in the old grave of the Confessor. This shrine is the one we now possess, as appears from the date on the basement of it. But its present appearance by no means represents the luxury of beauty with which it was once invested. Henry VII. and his grand-daughter, Queen Mary, continued to enrich the "shryne" of St. Edward, King and Confessor.

The tombs at Westminster have been at least spared from the hand of the early restorers, if not from the destroyers. Tips of noses and fingers are lost; but there are no staring additions. The earliest tomb erected after the completion of the new choir was that of the beautiful little daughter of Henry

* By G. G Scott, R.A., F S.A. With Appendices, supplying further Particulars and completing the History of the Abbey Buildings. Second edition, considerably enlarged. Oxford and London: J. H. & J. Parker. 1863.

* See p. 274, *ante*.

III., obt. 1257. She was dumb; but was so dear to her mother's heart that when she died the queen fell dangerously ill, and would not be comforted. The king, too, was so grieved at her loss, and at the illness of the Queen, and at some successes of the Welsh, that he also fell ill. Of course the sorrow of the survivors must be associated with the record of every death; but around this tomb of a little dumb princess, to whom only five years were allotted, there lingers a memory of ineffable tenderness. It would be impossible in our limits to catalogue the tombs even were we to omit those not of especial mark; we must content ourselves by recommending to our readers' attention Mr. Burges's description of them. There are three groups: those partly of foreign origin, made of Purbeck and decorated with mosaics; those of stone painted and gilt, which are strictly English; and those composed of native marbles in conjunction with bronze and colour and gilding. There are records extant relating to payments for the construction of many of the tombs. These, of course, give the name of the artist, and other details of interest and moment. Thus we learn indisputably, that the tomb of Queen Philippa is of Flemish workmanship:—

Issue Roll, Michaelmas, 40 Edward III.

"Jan. 20. To Hawkin (de) Liege from France in money paid to him in discharge of 200 marks which the Lord the King commanded to be paid to him for making the tomb of Philippa, Queen of England, the King's consort, by writ of Privy seal, 133*l.* 6*s.* 8*d.*" (Page 170.)

Besides this there were 5*l.* paid to John Orchard, a stonemason, for making divers images of angels for the tomb; 18*l.* 2*s.* for divers other charges, including the porterage and carriage of the ironwork from the tomb of the Bishop of London, buried in St. Paul's; and a further sum of 40*l.* for the ironwork in question.

The statue of Queen Eleanor is of English workmanship. The artist, Torel, was a goldsmith and citizen of London. There has been an attempt to prove that he was a member of the Italian family of Torelli; but this Mr. Burges, agreeing with others, indignantly denies. The name of Torel, he says, occurs in documents from the time of the Confessor down to the said William, whose memory we must, therefore, cherish as English. When the beauty of the statue of the Queen is examined it will be understood how acceptable is this discovery. There are still fifteen brasses in the Abbey church. These are likewise enumerated and described.

It is conceded that the more we know the more we have to learn. In the same way the present volume shows us that the more the treasure at Westminster is examined, the more there is to see. It has yet to be popularly appreciated. The lights brought to bear upon the subject from old records are extremely valuable; and, since the publication of the first edition, Mr. Burtt has made discoveries of further passages bearing upon the subject that, it is to be hoped, will induce him to prosecute further researches. Probably, no one writer could have gathered together all the information to be found in this edition of the "Gleanings." There are a dozen gentlemen besides Mr. Scott who have brought their offerings to the work. These are, not as of old, frankincense and myrrh to burn before the altar; but objects still more costly and difficult of obtainment,—learning and skilled labour of a very high order.

The seventy illustrations deserve praise. In these, French and English workmanship is seen side by side, for an illustration has been borrowed from M. Viollet le Duc's "Dictionnaire Raisonnée." With the exception, too, of a cut borrowed from Brandon's "Analysis," the woodcuts are the work of Mr. Jewitt, and the engravings of Mr. Le Keux. The illustrations of the retabulum are examples of very minute work drawn with much precision. In the central compartment our Saviour is represented as holding a globe in his hand, which is about one-eighth of an inch in diameter. On this small surface Mr. Jewitt has contrived to show most of the objects depicted on the original,—water, trees, a crane (?), and a bird flying in the air. It was hoped that a MS., in the possession of the Society of Antiquaries, giving a view of Abbot Islip's funeral, would show the newly-found retabulum; but, unfortunately, the middle of the altar screen is shown hung with black. The upper part of the screen is depicted. Two illuminations from the life of St. Edward in the University Library, Cambridge, have conveyed more explicit information. The first shows one end of the shrine in which the saint was, probably, first deposited after canonization, with the infirm persons creeping through the openings left in his tomb for this purpose. There is a pillar on either side of the shrine surmounted by statues of St. John the Evangelist and Edward the Confessor. It is, therefore, probable that the two large twisted columns which we now see at the basement of the shrine served for a similar purpose. The second illumination shows the side of the same shrine. The lid is raised, upheld by several persons; and four other persons, one of whom is doubtless intended to represent Gundulph, who vainly endeavoured to abstract one of the hairs of the beard, are re-adjusting the saint's remains. His features and beard are shown as in perfect preservation; and there is a crown upon his head.

The Bayeux tapestry shows the Abbey church in outline: this profile has been drawn, and leads the first chapter. Mr. Le Keux's delineations of ancient masonry are most carefully done. We need not insist how important it is that the mode of the masonry in illustrations of buildings should be correctly given; because it is well understood that the plain masonry of a fabric may be as indicative of the period at which it was erected as any part of the ornamental work.

The notes given by the editor make suggestive comparisons, pile up additional testimony, elucidate and unravel many points of interest. Thus, Sir Christopher Wren quotes from a transcript of an old document the state of completion the fabric was in at a certain time: through the accidental addition of a letter in his transcript he applied the description of the choir to the nave. The editor alights upon this error like a hawk. "*Domus aræ*, literally the house of the altar, obviously means the choir, whereas Wren has taken it for the area or nave, which makes an important difference." An account of Westminster Abbey, without a description of Henry VII.'s Chapel in it, would have been an incomplete performance. The editor has supplied this important feature, as well as an account of the Jewel-house. The last mentioned, "*Turris Vocata le* Jewel-house," built in the reign of Richard II., has been fitted up in the interior as a record-office. This adaptation has occasioned several alterations in the upper part of it; but the basement, used as a kitchen(!) and offices, with the original groined vaults, with moulded ribs and carved bosses, are intact. Mr. Parker adds, that the entrance to the Jewel-house, being through a Government-office admittance, is generally refused; but the antiquary wishing to explore its fastnesses may do so by explaining that it is the basement only that he is desirous of viewing; not the Record Tower, as it is now called. The walls of this ancient strong house are 6 feet thick; and the masonry, generally, is of a similar character to that of the cloisters and other vaulted substructures built by Abbot Litlington. On the bosses of the vaulting in the parts of the cloisters attributed to this abbot the initials N.L. may be traced—rendering conjecture as certain as it may be.

The tomb of so many kings and great ones "departed to the mercy of God," as the old stonecutters used to write two centuries ago,—the scene of their coronations, of their devotions, the object of their choicest enrichment,—("We wol," writes Henry VII., "that whensoever it shall please our Salviour Jehu Crist to calle us oute of this transitorie life be it within this our Royme *or in any other Reame or place withoute the same*, that oure bodie bee buried within the same monastery; that is to saie in the chapell where our said graunt dame Iaye buried; the which chapell we have begonne to buylde of newe, in the honour of our blessed Lady),"—Westminster Abbey Church, cannot but be regarded as a series of historical evidences touching many of the principal events in our history, as faithful as they are fascinating, as expressive as they are enduring, as vivid as they are priceless. Let it be reverently preserved and cared for.

COLOURED DECORATIONS.

BAPTIST CHAPEL, NOTTING-HILL.

SOME of the ribs from the annex of the International Exhibition have been used to construct a Baptist Chapel, in the Cornwall-road, Notting-hill, and the structure was opened a few days ago. It will seat about 1,000 persons, and has been erected by Messrs. Lucas, Brothers, under the direction of Mr. Owen Jones. Externally, at any distance, its appearance is not very prepossessing; though even here, on approach, the hand of taste is observable in the panelling by incised lines of the exterior cement. Within, however, a very agreeable effect has been produced, at a comparatively small cost, with the blue, white, and red, which Mr. Jones handles so effectively. The angularities of the ribs are cleverly treated so as to obtain a regular curve on the face of them.

A correspondent asks for some information concerning the execution of these decorations, and those at St. James's Hall. Mr. Owen Jones kindly enables us to reply. The decorations to the roof and ribs of the chapel are executed with one coat of distemper on the rough boarding, and the ornaments are stencilled in distemper upon that. The walls of the chapel are in Portland cement. One coat of distemper also was sufficient for the walls. Mr. Crace's decorations at the International Exhibition building were executed, we believe, in the same way; but whether with one coat or two, we do not know. With regard to St. James's Hall, the ceiling was stencilled in oil on paper in the workshop to save time, whilst the ceiling was being plastered. The ceiling is in Parian on lath, done to save time in drying. As soon as it was finished, the men were able to stick up the decorations in a few days. It was stencilled in oil in order that it might be washed, an operation which will be performed this autumn. The walls are in distemper on Parian. "But this Parian," says Mr. Jones, "has always played me false wherever I have used it. The salt works through whatever you put on it. It would be wiser always to make your client wait rather than use it for this purpose."

MARYLEBONE AND WEST LONDON SCHOOL OF ART.

ON Tuesday evening last, the first annual distribution of medals and prizes amongst the students of this young yet highly successful institution took place at the Court House, Marylebone-lane. The meeting was presided over by Mr. A. J. Beresford Hope, who was supported by the Lord Bishop of Chichester, Mr. Harvey Lewis, M.P., the Rev. C. J. P. Eyre (rector of St. Marylebone), Mr. Peter Graham, Mr. Hepworth Dixon, Mr. Godwin, Mr. J. A. Nicholay, Dr. Marshall, Mr. S. M. Hubert, Mr. G. Phillips, Mr. W. C. Cocks, Mr. Lomax, Mr. Little, Mr. Burchett (head master, South Kensington), Mr. Collinson and Mr. Hagreen (masters of painting and architectural schools, South Kensington), Mr. Macdonald Clarke (master of the school), and others.

In opening the proceedings, the Chairman said it afforded him peculiar gratification to be enabled to preside at this inauguration, the first public assembly of the school of art, which had been so successfully founded by the untiring exertions of a few private citizens, of whom they might well be proud. He need not dwell upon the desirability of art: it was the breath, the life of the world. There were form, colour, and material in everything; and as they constituted art, so art was a necessary pre-existing accompaniment of civilization. There might be good art, there might be bad art—that art which violated and debased its subject—but art there must be, for form and colour presupposed art. Art was the smile on the face of nature—that which cheers and delights what would otherwise be a matter-of-fact, plod-along world. It was that which made the church proudly lift its spire to heaven, which made the palace gorgeous, which gave its attractive appearance to the cottage, with its few plants tastefully disposed, its few prints hung around its walls. All work and no play made Jack a dull boy; and so the Jacks and Jills who went to art-schools, not to look at pictures and read catalogues, but to do art for themselves (which was a far more difficult thing than to look at art, and, if one had money in his pocket, buy it), had now come to play till the work began again. Two years ago this school was begun in a very humble way; and, under its indefatigable master, Mr. Clarke, it had gone on increasing till it had outgrown the infant school in which it used to assemble; and those who were then there would well remember how they worked against time and tide and circumstances, through pure enthusiasm for their vocation. Institutions of this kind required both a poetic, enthusiastic mind, and an active practical mind, to give them life and that tangible support wanted when the flame of enthusiasm had burned itself out, which it sometimes did for want of fuel. When the institution commenced, it received the support of Mr. Hubert, Mr. Jackson, of Rathbone-place, Mr. Phillips, Mr. Morant, and Mr. Peter Graham, to the last of whom the school should be especially grateful for the kind assistance he had afforded it, and who, when their tenure of the premises in Wells-street had expired, with a public, munificent spirit, put himself in the way of becoming lessee of the admirable premises in Portland-place, where

the school was now situate, and interposed himself between it and the rent-collector, tax-gatherer, and others, that hovered around such institutions; and thus he enabled its promoters to carry out their good designs in the cause of art. Now the school had these excellent premises well fitted, well lighted, well conducted. As far as the teaching expenses went the school was self-supporting, but there were rent and taxes, for which the public should hold them harmless; and it was also desirable there should be something further in the shape of extra prizes, extra specimens, extra treats for the pupils, which might be contributed to openheartedly and with open hand, and of which he hoped the school would not be deprived, and to which he believed it had a just claim. In May, 1862, when the school was but a baby in swaddling-clothes, toddling along in Wells-street, the number of pupils was 59, which increased in June to 65, and in July to 72. Then they started off for a holiday, and came back 112 strong in October, 134 in November, and 126 in December. In January, 1863, the school numbered 118; got up to 125 in February. In March the number came down to 100, and in April to 90; but that was because they were flitting, and of course when people were doing that, they could not sit on stools and draw busts. But the first complete month we were in our new place, the pupils shot up from 90 to 140, more than the summit level to which we had hitherto attained, the monthly average for the first year being about 100. The proof of the pudding was in the eating, and this pudding had been well boiled in the boilers at South Kensington, where there were two examinations. First, a very awful gentleman—an inspector, but not one of those generally attired in the blue coat and metal buttons—came and ranged the pupils in two grades; and those who turned up first in the second grade generally got some medals, books, or other prizes; but the other, the national examination, was something grander. There were ninety odd schools in England, to whom eighty medals were given to be competed for. The natural average distribution would, therefore, be eight-ninths of a medal to each school. Instead of this school gaining the average, it had gained two medals out of eighty,—more than twice the average. If they were wise, this would make them determined to do more this year; if foolish, make them fall back in false security on their present success. They could hardly apprehend the desirability of an art-education to the handicraftsmen of this country, who should be ministers of art to the rest of the community. He did not mean to say they should have an education which cockered them up, and led them to think a few years in an art-school was to set them up above great master painters and sculptors of past ages. If so, he would retract all he had said in favour of art-schools. But he did not believe such would be the case, but that bumptious, ignorant men, who laid down their own infallible rules of art, would become more humble and teachable when they learned they were but picking up a few pebbles from the ocean side. Handicraftsmen should be taught to be working artists—art workmen—intelligent producers of the ideas set before them. By an analysis of the school in December last, it was found that out of 223 pupils, there were 23 carvers, 23 teachers, 16 upholsterers, 16 carpenters and joiners, 15 jewellers, 14 decorators, 14 clerks, 15 cabinet-makers, 12 glass-painters, 12 chasers and die-sinkers, 11 engineers, 10 metal workers, 13 miscellaneous, 13 at school. He looked upon this great art-movement as a very important social movement as concerned the body politic, as it tended to unite classes together.

The Chairman then read the names of the "passed" students at the second-grade examination, and also the names of those who obtained prizes at that examination; which latter were Miss Mead, Messrs. W. Dumonier, F. Braun, M. M. Glover, C. Hanbury, G. E. Higginson, H. Montford, B. Page, T. Pearce, T. Spooner, J. Stower, F. Tebay, J. Weir, W. Cousens, D. J. Blaikley, and T. E. Hall. Those who obtained medals were Miss Clapham, Messrs. F. Braun (2), D. J. Blaikley, T. E. Hall, G. H. Ives, H. Montford, A. Perry, and W. Cousens (2). Honourable mention was awarded to Miss Clapham and Mr. G. H. Ives, and the National Medallions to Mr. F. Braun for specimen of marqueterie, and to Mr. H. Montford for modelling the figure from the cast. The prizes were handed the winners by the chairman, who congratulated them on the honour which their success conferred alike on themselves and the institution.

Mr. Sparrow then rose, and, on the part of himself and fellow-students, presented Mr. Clarke with a handsome clock, in a marble case, with bronze statuette, as a mark of the esteem with which they regarded him, and as an acknowledgement of his efforts to promote the cause of art, to which Mr. Clarke responded in a few suitable sentences.

The Lord Bishop of Chichester then addressed the meeting, and accounted for a late arrival by saying that the cab-driver had taken him to the poor-house, and he had been wandering about for half an hour to find out where the court-house was. He hoped, as this was only an early stage of the society, that it would become better known each year of its existence by such an agreeable meeting as this. Nothing had been more gratifying to his feelings than to see the unselfish, generous sympathy and interest manifested by the student in the success of individuals. He had not been aware of the existence of the society, until he was lately informed of it; but he should try to do what he could in his humble way to forward its progress; as he believed that, next to the great influences of religion and morality, nothing tended more to elevate the human character than the study of the beautiful harmonies of art.

Mr. Harvey Lewis said he felt some difficulty in speaking on the subject of art after their patron, who had devoted so much energy, time, and money to foster the idea of art, and advance its study, as one of the most humanizing and intellectual pursuits to which man could devote himself. He considered that the fact of the scholars having obtained two National Medallions for eight months' work was most encouraging, and would induce the pupils to put forth all their energies to do still better in the future. Those who had visited the two Great Exhibitions of science and art which had taken place in this country, must have been struck with the vast improvement that had taken place since 1851, even in the minutest articles of domestic use; showing that articles could be produced which would delight the taste and refine the mind. Such things were not only a daily pleasure, but they also had to do with commercial prosperity. Vast numbers of foreigners were in the habit of flocking to Paris to make purchases, because they believed they would find taste there better than elsewhere. But if they took the trouble to look for it, they could find better taste in London combined with greater excellence of workmanship. If, by strict attention to the rules of art, by losing no opportunities of applying the rules of art in the various branches of industrial occupation, they could convince the world that high art could be found here as much as in Paris, then would they confer not only a benefit on themselves but also one on their country at large. Not long ago, an action had been tried at Paris, where some calico goods had been printed with a pattern pirated from a French design, and damages recovered. This showed that we ought not to copy but to originate design ourselves, instead of passively adopting the ideas of others. He would earnestly impress upon the students present to turn their natural abilities to their best use, and lay a good foundation by a proper course of instruction.

Mr. Godwin said he was well satisfied with the aspect and prospects of the schools; but when he looked around the room, knowing as he did what the borough of Marylebone was, he felt the present meeting to be a positive disgrace to it, when he saw there so few of those in the borough who ought to have given their personal attendance. All should have the power of depicting what they see. He that could learn to write could learn to draw. Thus would power be gained, — art-power, and money-power too. A workman who could draw would become a foreman, and might soon become master. During the last ten years industrial art had made great strides in England, as was shown by the accounts the French reporters had given; whilst in France they had remained stationary; and they now talked of establishing there a department of art similar to that at South Kensington. Nevertheless, thousands and thousands of pounds were sent out of England every year for the purchase of patterns. A considerable portion of the designs carried out by our manufacturers was French in spirit; but if our Government had been true to art, we should now have the world coming to us for designs. This might yet be. He begged leave to propose a vote of thanks to Mr. Beresford Hope, whose activity in the cause of art was quite remarkable.

The Rev. C. J. P. Eyre said, the same reason which had prevented him from joining the school earlier—namely, positive ignorance of its very existence—had probably prevented other admirers of art from attending. He approved highly of the object of the school, as tending to advance men morally, socially, and politically; and felt sure no step could be taken better calculated to do so. He should be happy to give any assistance he could to the school, and was certain his parishioners would liberally respond to its wants. He was glad to hear they were looking to the public only for rent and taxes. He was glad that the institution, embracing as it did the working classes, was made dependent on their own efforts. He hoped the intelligence of the working classes of Marylebone would insure its support, with the exception of what they might be allowed to contribute in the shape of rent. He was very glad this was established; because, in addition to the rational and improving amusement provided, it had a tendency to elevate the moral feelings; and, when the student compared Art with Nature, to discover the alliance between them,—to lift up his eyes to Him who, the Great Parent of Nature, would, if it were properly dedicated to Him, bestow His blessing upon the development of art. He seconded the resolution, which was passed with acclamation.

Mr. Hope, in acknowledging the compliment, said, when the great standard of English industrial art was raised, it was done by his father, the late Thomas Hope, when he resided in the parish. In the parish, too, he (the chairman) was born; and therefore he felt as if, in some measure, he sat there by hereditary right. The reason for the scanty attendance of which Mr. Godwin complained was that many people were out of town, and that others were just then sitting down to dinner; and they must therefore be found guilty, as a French jury would say, "with extenuating circumstances."

Mr. Peter Graham then proposed a vote of thanks for the Vestry Hall, which Mr. Cole seconded, and which was carried unanimously. Mr. Graham was himself most warmly received.

Mr. Hubert expressed the very great obligations the committee of the school lay under to Mr. Graham for coming forward to assist them at a time when they otherwise must have appealed to the public for a contribution to erect the building; and proposed a vote of thanks should be given to him.

Mr. Hepworth Dixon (editor of the *Athenæum*) seconded this, and stated that it was not until Mr. Hope told him that he was aware of the existence of this institution. He had no doubt that when it was known, men of art, men of science, and the public would come forward to render any assistance that might be asked at their hands, and enable them to go on prospering. If he might be allowed a few words to the students, he would say,—there are two conditions on which you will do the great work you have commenced, and on which you will get the assistance I half dare to promise you in the name of my fellow-parishioners. First, by being determined to work; that is the first great element of success in this world. There is a sort of ideal theory that men of genius need not work. Throw that fallacy aside the very first moment you take pen or pencil in hand. The men of genius are those that do the most work. He then instanced Bacon, Shakspeare, Michelangelo, in support of this truth. The other condition he urged was, that the work should be done in the humble, teachable spirit in which good men and true worked.

Mr. Graham briefly responded to the compliment, and the meeting then separated.

PROPOSED RESTORATION OF THE CHURCH OF ST. BARTHOLOMEW THE GREAT, WEST SMITHFIELD.

THE Committee formed for the purpose of restoring this fine specimen of Norman architecture received a large gathering of archæological friends in the church on Monday last, when, after a few words of introduction from the Rev. John Abbiss, the Rector, the Rev. Thomas Hugo commenced with the history of the monastic establishment, derived from the records of Mediæval chronicles. Mr. J. H. Parker followed with an architectural account of the church, and Mr. Beresford Hope concluded with an exhortation to liberality and of encouragement to the participators in the work. The Lord Bishop of Chichester having moved, and the Hon. Dudley Fortescue having seconded, a vote of thanks to the rector for the opportunity of assembling in the church, the meeting adjourned to view the "Purgatory" behind the present east wall of the church, and the crypts connected with the

building. The promoters of this restoration are preparing to appeal to the public for aid in raising the necessary 4,000*l.*, on the ground that the work is not merely parochial but national in its character. Nearly 1,100*l.* had been promised at the close of the meeting, the larger portion being contributed by the parishioners themselves. About 250 persons were present.

ST. BARTHOLOMEW THE GREAT, WEST SMITHFIELD.

AT a time when attention is directed to this very interesting church, through the effort now being made by the rector and churchwardens to raise a fund sufficient for its restoration,—an enterprise which must commend itself to every lover of antiquity,—a few notes on the building will probably be acceptable.

The tomb of the founder, Rahere, has certainly been restored during the present century; for in Storer's "London and its Environs" (1804) there is a view of the monument, in which the pinnacles are wanting, but have been ingeniously supplied by knobs, as was the custom in "the glorious Georgian era." With this exception, however, the tomb is as we see it at this day; but there is no inscription; nor do I find any mention of one by early writers; and think it not unlikely the present inscription is of recent date, or at least has undergone considerable alteration; and even since Malcolm's time the word "*hujus*" seems to have been substituted for "*istius*."

Mr. Parker, in the interesting account of the church read at the meeting on Monday, considered that what had been usually called the Prior's House, on the east side of the choir, was really the Lady Chapel; but I do not remember that he indicated the true position of the Prior's House, which was most likely to the south of the church, perhaps on the site of St. Bartholomew's Chapel, which appears, from the meagre description we have of it, to have been very little like a chapel. Mr. Parker's suggestion is very reasonable; and it is not improbable that it is to this part that the writer of the MS. in the Cottonian Collection refers when he says, "In the Este parte of the same chirche ys an oratory and yn that an awter yn the honor of the moste blessid and pp'tuall Vi'gine Mary yconsecrate;" and not to what was the old vestry adjoining the south aisle of the choir, as has been supposed by Malcolm and others.

Mr. Parker also explained that the Early Pointed gateway in West Smithfield was not the doorway to the south aisle as it had been considered even by the architects of the proposed restoration in their published report, but the entrance to the Close. The grant of the Priory by Henry VIII. to Sir Richard Riche accurately defines the extent of the nave as it was then, "a void ground 87 feet in length and 60 feet in breadth," and was reserved as a churchyard for the parish church, to which purpose it has been used until our own time; while the north cloister extended to the west front of the church, as at Wells. I am surprised that the difficulty of reconciling the present dimensions with those in the grant had not before occurred to antiquaries. I had myself supposed that the churchyard marked the limit of the original church, but that there had been a subsequent addition, which, being of less substantial work, had become ruinous; but Mr. Parker's suggestion removes the difficulty, and is borne out by the size of the doorway and extent of the mouldings, which are unsuited to the position assigned to them in the church.

While on this part of my subject, I may mention that I have read of a plan of the Monastery by Carter, which formerly belonged to Mr. Britton,* and should be glad to know, through your pages, if this plan is still in existence, as it would be very useful to identify the various portions of the Priory.

It is very saddening to read the history of the gradual destruction of the very beautiful cloisters, of which I believe there are now no remains—*Periérunt etiam ruinæ.*"

I remember witnessing their final destruction some ten or twelve years ago; and I recognised the other day the figure of a bishop giving the benediction forming one of the bosses, which a workman employed in the demolition offered to let me have for a gallon of beer. It is, however, happily preserved in the church, with some other fragments, which may, I hope, form the nucleus of a very interesting museum, which we are promised if the restoration is carried out.

Pennant, in 1790, says that eight arches of the cloister were standing. Malcolm, in "Londinium Redivivum," published in 1803, says:—

"In turning to the right we pass along the west side of the cloisters, in an alley or court between them and Duck-lane (now Duke-street). This part is so far demolished that only a few flints are discoverable in the bases of the houses, and the area is a farrago of sheds, walls, &c. On crossing it through the riding-ground of Mr. Wheeler, livery-stable keeper, we find a scene of hateful degradation,—horses tied for the purpose of shoeing to the outside, and horses standing in the inside of the beautiful Eastern cloister. Why was not this precious remnant converted into a passage to the church, and thus, in some degree, preserved to its original sacred use? Can London boast such another stable? I hope not. The arches, groins, and keystones are perfect, most delicate, and exquisitely proportioned, of true Gothic elegance" (p. 289). He adds, "The cloister is 95 feet long and 15 feet broad."

Malcolm engraves five keystones or bosses from the cloister, one representing the martyrdom of the patron saint, another two bishops with croziers, two others with arms, one with three fleurs-de-lis.

He also has a view of the south transept in its then state (p. 290), which, although very ruinous, shows some arched openings, and a window similar in design to the triforium, which have since disappeared.

Storer, whose work I have before alluded to, has an engraving showing one side of the cloisters complete—the eastern side.

In Godwin & Britton's "Churches of London" its condition is thus described:—

"The vaulting is formed of chalk and rubble stones united by mortar with stone groins, which spring from clustered columns on either side, and have carved bosses at the intersections. The groining is simple and good; and we cannot help regretting the present degraded and dilapidated state in which the cloister remains, or avoid expressing a hope that some measures may speedily be adopted to prevent any further injury, and preserve that which Time seems to have respected."

In Knight's "London" there is a very good account of the church, and a plan, which, although without a scale, and inaccurate in some respects, is very useful, and has evidently been consulted by the architects in preparing the plan attached to their report on the restoration. In this plan eight arches of the east cloister are shown standing; but it will be seen by the description there were but five remaining. In Messrs. Lewis & Slater's plan there appear to be only eight bays shown; but I think there must have been another bay to the south, giving access to what was called the refectory, but which Mr. Parker believes to have been the dormitory, with a staircase communicating with the south transept. The position of the south cloister may be traced by some modern walls, which, as was frequently the case, appear to have been raised upon the old foundations, as well as by an arch on the west side, referred to in the accompanying extract. After lamenting the decay of the priory, and "the many exhalations of lath and plaster, the mushrooms of its night," as Malcolm calls them, which occupy the site of noble buildings, the writer goes on to speak of:—

"A smith's workshop, where some of the arches of the eastern cloister (the only one of which there are any remains), appear in the opposite wall. Violence and decay have deprived these arches of all their original beauty, but not of their bold, expressive character, that still remains stamped upon them. The soil here, as in almost every other part surrounding the church, has been raised several feet; thus, for instance, the spring of these arches is nearly level with the ground. . . . . Much of this beautiful part has been lost of late years by the fall of the roof and part of the wall upon one side. . . On the eastern wall are five arches, more or less entire, yet remaining, and one on the west" (vol. ii. p. 50).

This was written in 1842, and a very few years after the cloister disappeared altogether.

The monuments in the church are very interesting, and are mostly well preserved; and some of the epitaphs are curious. One of these latter, in which the hardhearted reader is invited, if he

"Fmd no vent
For tears, yet stay and see the stones relent,"

is a very amusing specimen of the hyperbolical style prevalent in that age; but an inscription to the memory of Abigail Coult, who died in 1629, "in the sixteenth year of her virginity," is remarkable amongst the false taste and platitude of most of the epitaphs, and reminds one of the simple inscriptions to the early Christians in the Roman catacombs.

The whole of the monuments, with one or two exceptions, have, by the care of some worthy churchwarden, been painted a fine black colour, although several of them are of alabaster; but it is proposed to restore them to their original hue. The bust of James Rivers, on the south side of the choir, is said by Mr. Cunningham, in a communication to the *Builder*, May 2nd, 1863, to be the work of Hubert le Sœur, the sculptor of the statue of Charles I. at Charing-cross. Mr. Cunningham does not mention his authority, and I suppose he relies upon internal evidence. The likeness is evidently the work of an artist, and is very spirited, and the verses attached to the monument are very good. JOHN HEBB.

* Godwin's "Churches of London," St. Bartholomew the Great, p. 15.

PUBLIC WORKS, LANCASHIRE.

HAPPILY now there is not much need to urge the necessity of some means of employment being provided for the tens of thousands of Lancashire operatives who, in all human probability, will, this winter, be without the means of earning their bread at their usual work. Before these remarks are printed the Bill for enabling corporations and other public bodies to execute works, and finding them the means to do so, will probably have become law. It will remain to be seen how far the means provided will meet the end; how far the governing bodies in the distressed districts will avail themselves of the provisions of the Act, and try to overcome and smooth down those minor obstacles which beset and encumber every project of expediency and emergency; and how far the operatives will apply themselves to aid in making the Act an applicable and effectual remedy (so far as it goes) for the evils and privations they endure, and which the philanthropy of the country has so nobly striven to alleviate.

Government has done its part. The Public Works Bill has been prepared with a careful regard for every circumstance of the case it proposes to meet. It is stripped, as nearly as legislative enactment can be, of red-tape formality; and it is presented to the affected counties in answer to their many and urgent appeals for something tangible to meet the crisis. Government has now, thus far, by the removal of every really formidable impediment, laid at the door of the local "powers that be" the responsibility of finding suitable employment for at least the greater part of the 100,000 operatives who, it is probable, will be out of work during the coming winter.

Public benevolence has done its part nobly, whether viewed nationally or locally. To expect a continuance of this unprecedented effort would be unreasonable; and even if the stream of contributions could be maintained in its full flow, it would be impolitic and unwise to keep a population in a dependence upon charity; in other words, as paupers, who have been accustomed to look with no small degree of honest pride upon the only motto they have asked for their standard,—that is, "A fair day's wage for a fair day's work."

Can it be other than degrading and demoralizing that stout able-bodied men should be crushing their way amongst women and children as recipients of the stinted allowance of the Poor-Law Guardians, or the bread and meal of charity called "*dole?*" How much better for themselves and for the public good that there should be provided employment upon which these men could labour and receive, not relief, but wages for work done!

I know that every particular town or place has its peculiarities, and that objections and difficulties will be urged; yet it is hoped that an emergency so great as the present will call for that public spirit which especially distinguishes the men of these northern counties.

A personal inspection of most of the towns in Lancashire will convince any one that their growth in population and consequent bulk has beyond all question outstripped any attempts at material improvements in a sanitary point of view; nay, not merely this, but that many of them have outgrown and overgrown the decencies, comforts, and requirements of their everyday life. It is admitted as a pleasant fact, that the past dozen years has wrought wonders in our manufacturing towns, and that many of them have not been backward in promoting and carrying out (so far as their means and opportunities allowed) such measures and public works as tend to show that the labouring classes are not estimated merely as workers for so much wages, but as sentient intelligent beings, capable of, and destined to enjoy, the higher pleasures of life. In many of the manufacturing towns in the North, the public spirit of progress has done much that is very praiseworthy: baths fitted with every comfort, and to be enjoyed at charges within the reach of the very humblest; public parks laid out with care and taste, where the labouring man can ramble after his day's toil, and where he can feel (as is expressed in a motto in one of the parks in Yorkshire) that "The rich and poor meet together—the Lord is the maker of them all;" news-rooms, reading-rooms, coffee-rooms, literary institutions, gymnasia, and many such comforts and luxuries

as the toiling children of a former generation dreamed not of. In sanitary matters, also, much has been done. Ample and abundant supplies of water; systems of sewerage and drainage; paving of streets in cottagers' quarters; improved and more healthy construction of mills and workshops; as well as many other similarly good works, have in many towns been carried out to a considerable extent; but in consequence of the rapid growth of these places, as before adverted to, there is ever before the local authorities an increasing demand upon their energies and resources for an extension of these blessings (especially sanitary) into the less favoured districts of their towns. There is a great work to be done; a national benefit to be attained: an army of workmen is ready for the task. A great calamity promises, if rightly used, to be a great and lasting good: we must rest awhile from the shuttle and the loom, and set to work to "clean up." There hath no trouble overtaken Englishmen which they have not grappled and overcome; and surely it will not be necessary that we should have to advocate, and even out of the public funds to assist, the best of the sinew and blood of our population to emigrate to distant lands, because a temporary crisis afflicts us. Its duration no man can tell, but that it is temporary, in the strictest sense of the word, is certain.

We have a peaceful army of 100,000 labourers who want bread and are willing to work for it: shall they receive the "dole" of the parish, and shall we let all things remain as they are, or shall they labour at the great and good work of towns improvement and get wages for their work? keeping themselves independent of pauperism, circulating the wages amongst the shopkeeping class, and carrying out in some shape or other the great sanitary work we *must do*, either now or hereafter, at no very remote period.

The money is forthcoming on most easy terms,—the men are ready,—the work is obvious and abundant everywhere in some shape or other,—the season of the year is favourable to the beginning of the work and the gradual accustoming of the men to the inclemency of out-door work in winter,—all is ready; and there wants only the will and ready concurrence of corporations and other such local powers to carry out the great practical problem of keeping a noble and enduring population *at home*, and setting them to the best of all tasks,—the improvement of their towns, their streets, and homes, and the carrying out every scheme of permanent good which may be devised.

Having had experience of the management of large numbers of factory hands engaged upon such works as I have detailed, I can attest to their willingness to work, and to their ability, under proper supervision, to do what under all the circumstances may be considered a fair day's work; their aptitude to apply themselves to all sorts of out-door employment is remarkable.

Is there a city, town, village, or hamlet in the counties of Lancaster, Chester, or Derby, of which it can be said that some or other of the following works are not desirable, and indeed necessary:—New or improved water-supply; systems of sewerage, with improved house-drainage; paving of streets; raising, lowering, widening, or otherwise improving existing public roads and footpaths; formation of new roads and streets; cleansing, widening, pitching, or otherwise improving rivers, streams, and watercourses; formation of public parks, pleasure and recreation grounds; erection of baths, or the construction of cemeteries? It is for such objects the Public Works Bill has been introduced; and it is to be hoped public spirit will arouse itself, and set to work in earnest to carry out what may be the more special requirements of each district: so that, whilst there is a cry for Government aid to send our artisans abroad, we adopt the better course of keeping them at home, that we may hereafter say that this and that good public work was done during the cotton crisis of '63; so that our day of calamity may be remembered as having set us to work at many schemes of public and lasting good, and which, had our day of prosperity been uninterrupted, we should never have found time or inclination to begin.

One word more, and I conclude this communication, which has already far exceeded my first intention. It is extremely difficult to persuade the majority of people as to the benefit of sanitary measures. The very term has become hackneyed; but I leave it to thinking men to determine whether any money value can be set upon the health of a people; whether everything which tends to public health is not worth every effort; so that we may have a population, not diminishing generation by generation in physical stamina, but rather rising to that standard which every man desires his own personal *physique* to attain to, and for which the ancients prayed, not unworthily, "a sound mind in a sound body." To take, however, the lowest standard,—the money consideration:—Just as in a private family sickness is expensive; so in communities sickness entails expense and loss, which, in the instance of the sick poor, is a burden everybody MUST share; and which, for this very lowest of all considerations, everybody should try to alleviate, and, if possible, prevent. J. B.

THE SANITARY STATE OF OUR INDIAN ARMY.

CONSIDERING the efforts we early made in the *Builder* to draw attention to this subject, it is highly satisfactory to us to be now enabled to record the issue of the report (dated May 19th), of the commissioners appointed to inquire into the sanitary state of the army in India. The report occupies in all 171 pages; and then there is a *précis* of evidence which occupies nearly 100 pages more.

The following are a few out of a series of thirty-nine recommendations to the commissioners:—That until the mortality be reduced the period of service in India be limited to ten years. That all new barracks be constructed to hold no more than a quarter company in each building, or at most half a company in one building in two separate rooms, having no direct communication with each other. That hospitals be constructed in detached pavilions containing no more than from twenty to twenty-four beds. That future barracks and hospitals be arranged *en echelon*, to receive the benefit of prevailing winds. That detached cottages be erected for married soldiers. That the hospital diet tables in use at home stations be adopted in India as far as practicable, and the hospitals supplied with properly trained cooks. That trained hospital attendants be intoduced into all hospitals, and that female nurses, under the new medical regulations, be introduced into large general hospitals. That a sufficient number of hill stations or of stations on elevated ground be provided; and that a third part of the force be located on these stations in rotation. In order to the gradual introduction of sanitary improvements for barracks, hospitals, and stations, as well as in the seats of Government and throughout towns in proximity to military stations, they recommend the appointment of commissions of public health, one for each presidency, so constituted as to represent the various elements, civil, military, engineering, sanitary, and medical; to give advice and assistance in all matters relating to the public health, such as selection of new stations and the sanitary improvement of existing stations and bazaars; to examine new plans for barracks and hospitals; to advise on the laying out of stations and bazaars, the sanitary improvement of native towns, prevention and mitigation of epidemic diseases, and generally to exercise a constant oversight on the sanitary condition of the population, European and native; to report on the prevalence, causes, and means of preventing sickness and disease; and farther, that administrative measures be adopted to give effect to the advice of the presidency commissions. That trained medical officers of health be appointed to act, in peace or in war, in connexion with these commissions. That a code of regulations, embodying the duties and adapted to the specialities of the Indian sanitary service, be drawn up and issued under authority.

Whether the Government intended to act on these and other recommendations of the commission remained to be seen; and Mr. Coningham accordingly gave notice of an intention to question the Government on the subject. This he has since done; and the reply of Sir C. Wood was that the report "had brought to light information which was not [officially, we presume,] possessed before; and now that the attention of the Government was directed to it, the most prompt measures would be taken to remedy the evils referred to." That there is pressing need, as there has long been, for some such action, is but too obvious in a case where, as the report states, but as our readers do not need to be now for the first time informed, "besides deaths by natural causes," which would be represented by 9 in 1,000, "60 head per 1,000 of our troops [picked troops in the prime of life] perish in India annually. It is at that expense that we have held dominion there for a century: a company out of every regiment has been sacrificed there every twenty months. These companies fade away in the prime of life, leave few children, and have to be replaced at great cost by successive shiploads of recruits."

This is the great fact of the report.

SANITARY "TELL-TALES."

To an extent which the most powerful microscope has yet failed to reach or discover, all parts of creation swarm with life. In the air there are probably exceedingly minute living things which may affect health to a greater extent than is at present understood. Clouds of minute insects in the summer time, when the weather is fine, reach high into the air; and, when the atmosphere is heavy, they cluster in denser clouds closer to the earth: these can be seen, like a mist, with the naked eye; and there can be but little doubt that there are myriads of far smaller life, the peculiarities of which we may probably be yet made acquainted with by means of the improvements of optical instruments which are in progress.

Over cesspools,* impure ponds, dirty cowsheds, in town neighbourhoods where the duty of the scavenger is neglected; and in parts where crowds of dirty and neglected people live, we see flights of insects which are nurtured in the foulness. Seeing this, it becomes an interesting question whether these and the smaller and at present invisible insects act like the vulture, the carrion crow, the raven, and other birds of this description; the hyænas, and dogs of the East; the rats of our own sewers, &c., as sanitary agents, which, by removing putrefying matters, purify the air, and which could not be spared without causing mischief; or whether these living matters are themselves in any case poisonous, and cause disease and death such as often occur in parts where they abound. If the bite of a single fly feeding on putrefying matter can kill a human being, as has just occurred in France, what may not hundreds of still minuter living creatures of a similar kind be capable of doing, even though in other respects sanitary agents useful in consuming putrefying organic matter? This subject is well worthy of far more careful inquiry than has yet been made respecting it. But one thing is at present certain, that the presence, in large numbers, of gnats, "midges," or *tell-tales*, as they are called, in some country places, is a certain indication of some impurity. By attending to the hints of these "tell-tales" we might often take a suggestive note for needful improvement.

THE POSITION OF THE LADY ON TOMBS AND BRASSES.

IN a paper on Framlingham Church, Mr. T. Shave Gowing, describing the Duke of Norfolk's tomb on the south side of the altar there, discusses a question of general interest. There are effigies, on the top of the monument, of Thomas, Duke of Norfolk, who was imprisoned by Henry VIII. and released by Mary, and on his right side one of his wives. Inquiring whether this represents his first or second wife (and inclining to the latter view), the writer says:—

"The position of the lady on the *right side* of the duke has been assumed to indicate royal descent; but as both wives were alike in this respect, and even the duke himself was entitled to royal quarterings, little value can attach to any inference from this source. In the course of inquiry as to the position of ladies on tombs, however, some points of general antiquarian interest arose; and as the results affect not merely the monument before us, but that of Lord Bardolph and his lady at Dennington, as well as others, they are here introduced. Thinking that brasses were less liable to be tampered with than figures on monuments, I requested a lady to furnish me with a list of all the pairs in 'Boutell's Brasses,' and in her own collection, specifying on which side the lady lay; to which some have been added from Parker, making in all no less than fifty-seven pairs; on analysing which I found:—

1st. That of the whole number there were thirty-four lying on the *left* side, and twenty-three on the *right*.

2nd. But a second inspection showed the curious fact that in thirty-three brasses of *knights* and their ladies, the lady is on the *left hand* in twelve cases only, but on the *right* in no less than twenty-one.

3rd. Of the twenty-four brasses of *civilians*, the

* We know an instance in which the crowds of small flies which constantly hovered over a spot in the rear of some premises in summer, at a time of sickness, led to the discovery of a covered cesspool there.

lady lay on the *left* side in seventeen cases, and on the *right* side but in seven.

It has therefore been too generally assumed from the practice of later times, that the lady should lie on the left hand.

The whole subject, which I believe has not been treated of before, it is clear requires a more extended investigation, though even in the present stage of it two conclusions seem established:—

1st. That in the knightly code some law prevailed as to the position of the lady, which remains to be discovered: it was clearly neither the position of the memorial nor precedence. If any conclusion could be drawn from *one tomb*, that of the knight with two ladies, where the right hand is given to the lady on the right side, we might suspect *affection* had something to do with it in some cases.

2nd. That among *civilians* the *general rule* seems to have been in favour of the *left side* for the lady, and the exceptions but few, only seven in twenty-four promiscuous cases."

WAREHOUSEMEN AND CLERKS' NEW SCHOOLS.

LAYING THE FOUNDATION-STONE.

ON Saturday in last week His Royal Highness the Prince of Wales assisted in laying the foundation-stone of a pile of buildings at Caterham, which are to serve as schools for the orphan and necessitous children of warehousemen and clerks. The building will cover the top of one of the numerous ridges connected with the range of the Surrey Hills. The place was formerly known as Beggars' Bush. It will now be called Russell Hill, after the president of the charity, Earl Russell.

Lord Russell read an address to the Prince, and the assemblage was also addressed by his lordship, and by Lord Brougham and other gentlemen.

The design for the building was selected from a competition of thirteen designs, the successful architect being Mr. T. G. Bland, of Birmingham. The style is Venetian Gothic, the exterior being of red brick, relieved with bands of white and stone dressing. The general design consists of a centre and two wings, the centre being surmounted with an ornamental clock tower. The entrance consists of a large hall, which conducts to a spacious dining-hall, with open timber roof, and which can be used, when occasion requires, as a chapel. The right wing is devoted to the girls, matrons, and the kitchen arrangements; the left wing for the boys', and master's house. The design includes baths, with a large swimming-bath. The building is to be heated with hot water. The total accommodation to be provided will be for 150 boys and girls. The lowest estimate for the construction of the building is 17,500*l*. The ground, including that upon which the new asylum is to stand, is twenty acres in extent.

HASTINGS.

Albert Memorial.—The memorial clock-tower is almost completed, and is in itself a decided ornament to the locality. It sometimes happens, however, that an artist's finishing touch spoils the whole picture. We would not say quite as much as that in reference to this memorial; but we cannot help noticing the want of sympathy there exists between the general design and the statue of Prince Albert, which within the past week has been added to the south side of the memorial. The statue is said to be life-size, and represents the Prince in his robes as knight of the Order of the Garter. It is placed in a niche half way up the tower; but being too small for that height, it wants that solid and majestic expression we are accustomed to look for in every representation of so good and so illustrious a man. It also happens that the bead moulding running round the tower and continued in the niche has the effect of a rope encircling the neck of the apparently suspended victim. We think that this latter objection could be removed, and perhaps the other evils lessened, by the very simple expedient of shortening the pedestal on which the statue rests. The miniature figure, with its neatly-chiselled trappings, might be a pretty statue in a library or drawing-room; but as a leading feature in a local memento of a nation's mourning, it fails.

Ragged Schools.—A building to be used as a ragged school-house is about to be erected in the Tackleway. Mr. Carpenter is the architect; and Mr. Harman the builder. The cost will be between 500*l*. and 600*l*.

Cottage-Building Company.—The Hastings and St. Leonard's Co-operative Cottage-building Company are doing their best to extend the principle of freehold independence among the working classes in this district. A large number of shares have been taken up, and several plots of building land have been purchased; and negotiations are now going on to secure some eligible sites, now in the market. Mr. Ford Mackenzie has been appointed architect to the company; and the directors, we understand, confidently anticipate that, as summer advances, the interests of the company will receive a considerable increase of prosperity. The houses are erected by the company, and allotted to the shareholders in much the same way as the prizes in an art-union. By paying a reasonable rent for a period of fourteen years, the occupier of the company's cottages will in that period become the owner of his dwelling, free of all future rent or other payment to the company. The scale of rents adopted by the company is as follows:—

Purchase money £100 ..	Rent....	3s. 10d. per week.
,, 150 ..	,, ...	5s. 9d. ,,
,, 200 ..	,, ...	7s. 8d. ,,

And so on in proportion.

Tenders have been received from contractors for the erection of four cottages, of six rooms each, at Tivoli, near Hastings, as follows:—Champion, 753*l*. 8s. 6d.; Batstone, 636*l*.; Stubberfield & Son, 597*l*. 16s.; or at the rate of 149*l*. 9s. each house.

Gas Mains.—The Hastings Gas Company are now engaged taking up their present mains, and laying down larger ones; the principal main being 2 feet diameter and the second 20 inches, and so on. It is probable that an extension of the gas-works, by new or enlarged reservoirs, will be the next step of this enterprising company.

JERSEY AND GUERNSEY.

New Barracks are being built for the use of artillerymen at the extremity of Green-street, St. Helier's, Jersey, in an inclosure known as *Le Champ des Pas*. The foundations of the new buildings have been already laid, and a well has been bored to a depth of 134 feet.

Sanitary State of the Town of St. Peter Port, Guernsey.—Dr. F. E. Carey, surgeon to the hospital and south district of the parish, says: "There is little of consequence to record during the past six months. The only case of genuine typhoid fever which has engaged my attention during the past five years that I have been medical officer of the district occurred last month, in Park-street. The subject of it was a labouring man. I could not distinctly trace its course, but have no doubt that the '*fons et origo mali*' were the cess-pools which abound in that neighbourhood. I have on a former occasion considered it my duty to warn the Douzaine authorities of the great danger in leaving this part of the town *wholly* undrained; but until our little community is disturbed by some violent epidemic, we cannot expect our sanitary authorities to be aroused from their inertia into activity."

New Lighthouse.—For the new lighthouse Mr. Lyster recommends the erection of a stone tower, 36 feet above the head of the breakwater, so as to elevate the lantern to a height of 45 feet 9 inches above the level of the spring-tide high-water-mark, and to procure for this lantern a lens of the fourth order—that is, one similar to that of the present pier-head lighthouse. He further recommends a second beacon-light, on the heights of Fort George, so placed that vessels, by merely taking the two lights in one, might find a free and safe passage right through the Small Russel to the roadstead.

THE LADIES' SANITARY ASSOCIATION.

A MEETING of this Association was held on the 14th inst, at their Office, 5, Cavendish-square, when Dr. Lankester occupied the chair.

The Chairman, in opening the proceedings, said—An unfortunate occurrence of recent date had given rise to the question of the ventilation of the bed-rooms and work-rooms occupied by those persons who were employed as milliners and dress-makers in west-end establishments. The first object to be obtained was a proper knowledge of that which was prejudical to health, as many who were desirous of remedying the existing evils were utterly powerless to do so from want of the necessary information on the subject. That knowledge Dr. Richardson proposed to impart in the lecture he was about to deliver, showing the evils now existing, and their remedies.

Dr. Richardson, in giving his lecture entitled "Work and Overwork," observed that it became this Society to make use of the opportunity afforded them of impressing upon the public the fact that a great lesson was to be learned from it. In the first place there were certain occupations which killed of themselves, such as india-rubber and sand-paper manufactures, where the artisans died from the deleterious nature of the manufacture; then there were professions where death was no less certain from the continued strain upon the mind, as law, medicine, and literature. And then, again, trades wherein men were destroyed from over bodily exertion, such as a blacksmith in a large town. In the latter case, in Marylebone, blacksmiths died at the rate of 31 per 1,000, or eleven above the mean of the male adults of the country. He passed under notice many other occupations, such as tailoring, shoemaking, composition in printing, clerkship, and other over-taxed callings, to dwell with a little more care on the dressmakers, milliners, and needlewomen. As to the remedy, he did not think the Government ought to interfere except by opening a royal commission of inquiry into the effects of overwork. The real remedy was to spread a knowledge of the laws of life and organization, and to teach people that overwork was the contrary of real thrift and industry; and that the old rule of eight hours' work, eight hours' play, and eight hours' sleep was the best that could be adopted; and he begged them to remember the great but simple warning:—

> "Ill fares the land to future ills a prey,
> Where wealth accumulates and men decay."

LEAF-BUDS AS MATERIAL FOR ORNAMENT.

SUMMER comes to us as a maiden with a lap full of flowers; Autumn as one of riper years, laden with fruits; and Winter as one robed in ermine who has reached the meridian of life's glory; but Spring comes as the child in whom the pulsations of life beat strongly and in rapid succession, and in whom we find no marks of care or scars left by sore troubles. There is something flaunting about Summer, with its profusion of blossoms; and with Autumn are bound feelings of regret at the fading of the year. Winter may have pleasant evenings, but who loves darkness rather than light? With Spring are born gladsome feelings and joyous emotion, for Nature is gradually brightening, and light is chasing away darkness. Spring is the morning of the year; ay, and the resurrection morning; the morning in which plants are quickened into life and clothe the barren earth with living forms of beauty.

Passing from the poetical to the real with the view of considering our illustration, we discover, from the most cursory glance at the forms here delineated, that leaf-buds are objects which are beautiful when considered as ornament. A wider survey of the spring buds, and a more extended acquaintance with their forms than we can derive from our half-page of illustrations will lead us to see that of all parts of the plant the leaf-bud is the most suggestive for ornamentation.

Without entering into a consideration of the internal structure of the bud, and the mechanism by which the scales are forced back in various directions at the expansion or evolution of the bud, we notice that the beauty of these members of the plant is in great measure due to the variety of the forms of the parts, to the diversity of the curves of the members, to the order in which they are arranged, and to the contrast of part with part. The variety in form of the members of the leaf-bud is great: the lower scales are broader than they are high: the upper are much longer than they are broad; and between these forms we have every variety of shape. A close inspection of the forms will show that a rich variety of shape is found in the various scales, and that the curve forming the boundary of every scale is of a dissimilar kind.

Fig. 5 is a delineation of the bud of the lilac. An observation of this bud will lead to an understanding of the variety of which we speak; and careful study of this variety in the case of lilac-buds will well repay the ornamentist.

Besides the variety presented by the scales of the individual bud, there is the diversity of form furnished by the scales of buds from different trees. The scales of the bud of the horse chestnut (figs. 1, 2, and 3) are very different from those of the lilac, and those of the honeysuckle (fig. 7) are very different from either: indeed, no two plants have scales precisely similar, and in the greater number of plants scales differ widely in shape from each other.

The curve bounding the scale must be considered as altogether separate from the curve re-

LEAF-BUDS FOR ORNAMENTATION.

Figs. 1, 2, and 3, Horse Chestnut (*Æsculus Hippocastanum*); 4, Dogwood (*Cornus sanguinea*); 5, Lilac (*Syringa vulgaris*); 6, Ash (*Fraxinus excelsior*); 7, Honeysuckle (*Lonicera Periclymenum*); 8, 9, and 10, Sycamore (*Acer Pseudo-platanus*).

sulting from the direction taken by the scale. The curves resulting from the directions of the members are generally more rigid and severe than the curves forming the boundary of the parts. Severity gives dignity and stateliness, and manifests power. Power in the case of plants arises from energy or vigour of growth; hence the powerful growth of spring gives dignity of aspect to the bud, and true dignity is always admirable. Stateliness and power, when combined with fitness and beauty, is to be desired; we find such manifested in buds, hence we should do well to study them with a view to producing the same effect in ideal ornaments.

Order is a feature of beauty. Confusion is never satisfactory. A want of arrangement in composition gives rise to a want of contentment in the mind, and in the absence of contentment there cannot be that feeling of repose which always accompanies the sense of beauty. In an ornamental point of view those buds will be found most beautiful which have their parts arranged in pairs. All our illustrations have their members disposed in this manner. If we take the horse-chestnut bud (fig. 1), we notice that it has scales arranged in pairs. First we have a pair, one of which is at the right and the other at the left; then we have a pair, one of which advances and the other of which recedes; then another pair, consisting of scales passing to the right and left; and so on: and this is the arrangement of the scales in all the buds which we have delineated. The satisfaction which arises out of this orderly arrangement is great, perhaps greater than we are at first prepared to admit: it is a chief source of beauty in buds.

The contrast of part with part is also to be noticed. The antagonism of line presented by the scales of the opening bud is marked, and is very valuable in an art point of view. This is well seen in the buds of the lilac given in fig. 5. In the bud of the horse-chestnut shown in fig. 1, this contrast is also well seen. As a rule, this pleasant duality of line is best seen in a group of buds such as we have in fig. 5, where three buds are congregated together.

Now, briefly to run over our illustrations, fig. 1 is a normal bud of the horse-chesnut, shown in the act of development; fig. 2 is an elongated slender bud of the same tree, which has been drawn out into its present form by light being afforded only from above; fig. 3 is also a bud of the horse-chestnut, two-thirds the natural size, with the upper scales of an abnormal character, as they terminate in small and imperfect leaves, which if more perfectly developed would resemble the large radiative leaves of the tree. Fig. 4 is the bud of the dog-wood: the scales which surrounded the base of this bud have fallen off, and a few small scars indicate their position. Fig. 5 is a group of three buds of the lilac. Fig. 6 is a group of three buds of the ash in an earlier state than any yet shown: these buds are perfectly unfolded, yet their forms are beautiful. The furrowed stem, and the mode in which the buds rest on its summit, are also worthy of notice for their ornamental beauty. Fig. 7 is a bud of the common honeysuckle: its scales are few and small, and are hidden under the basal leaves. Figs. 8, 9, and 10 show three stages in the development of the bud of the sycamore; fig. 8 being an early condition, and fig. 10 that in which the proper leaves of the plant are just making their appearance.

STREET ARCHITECTURE: IRELAND.

HOUSES IN GRAFTON STREET, DUBLIN.

THE experiment which Mr. Digby Wyatt has tried in the design of the premises which we have selected for our principal illustration of the current week is one interesting enough to architects and archæologists, and of real importance to Irish nationality. It is neither more nor less than an effort to adapt some of the more picturesque elements of ancient Irish ornamentation to the decoration of a structure ministering to the directly utilitarian exigencies of the present day. Few of our "tarry at home" readers, who may have made themselves acquainted with the essays of Dr. Petrie, or who may have examined with attention the curious cast of the chancel arch of Tuam cathedral, of the piers and circular window from Rahin church, of the doorway from Freshford, or of the remarkable crosses from Monasterboice and Tuam, which are comprised in the Crystal Palace collection of casts, can have failed to recognize the peculiar features of design which characterized the ancient monuments of Ireland—monuments which, while recalling the traditions of classical art, in the general structural arrangements of the pier, impost, round arch, and archivolt, yet exhibit a singular individuality in every detail.

We cannot, upon the present occasion, enter into any attempt to define those eccentricities of style, frequently accompanied by successful aspirations after beauty in conventional form, which have been fully commented upon in the essays of Mr. Westwood, Dr. Petrie, Professor Donaldson, and Mr. Wyatt himself: we must rest contented, therefore, with recording our impression of the availability for architectural purposes of many of those singular types of intricate decoration which appear to have formed the pride and delight of the ancient Celtic races. It is more than probable that the present endeavour, striving to revivify such types, will stimulate many an Irish architect to attempt, upon a yet bolder scale, to recreate a national style,—sympathising with the past, and yet identifying itself, as all national architecture should do, with the present. To Mr. Wyatt must at least be awarded the credit of having induced his client, Mr. William Longfield, of Dublin, for whom the houses have been built, to make an attempt at once novel and successful.

HOUSES IN GRAFTON STREET, DUBLIN.—MR. M. DIGBY WYATT, ARCHITECT.

THE EFFECT OF DRAINAGE ON THE RIVERS AND RAIN-FALL.

DURING the last century,—nay, even within the last fifty years,—the extent of the land which, by means of drainage, has been converted from fenny marshes and large shallow lakes into useful land is remarkable. In Lincolnshire the aspect of wide districts has been completely changed. Corn-fields and fat meadows, and the partridge and the hare, have taken the place of reedy marshes, the wild fowl, and the heron.

No doubt, all this has been of immense advantage as regards health, and has also been the means of adding very largely to the value of land. It may, notwithstanding, be of use to consider what effect this extensive system of drainage is likely to have, eventually, on our streams and rivers, and upon the general rain-fall over the land.

During one of Mr. Glashier's recent balloon ascents, that gentleman noticed that, for miles along the course of the Thames, there hung a heavy bank of clouds; and, probably, in the days of old, instead of sunshine, similar clouds would be seen suspended over the wide water-covered district of Essex, which is now dry, as there are several other neighbourhoods in which extensive surface drainage is going forward; and there can be no doubt that this process has diminished the volume of several of our rivers, and must diminish the rain-fall. This points out the necessity which there is for cultivating—if we may so say—our streams and rivers, and striving, as far as possible, that none should be lost or materially lessened.

In a recent suggestive article in *Chambers's Journal* on the disappearance of springs in many parts, the writer traces the decay of agriculture and population to their loss. He mentions many places in which there are indications of there once having been fertile regions which are now desert wastes, owing to the failure of the water supply. In one part of Persia, it is mentioned that 500 water sources had failed, and caused sad loss to the population. This is attributed to the destruction, for various domestic purposes, of the trees which, on the high lands sheltered and also served to supply the springs, which, spreading abroad, caused verdure and beauty. On one of the West India islands, the woods which sheltered the springs were recklessly removed, and the water supply failed; and it was only by re-planting that this necessary was to some extent restored. We might usefully give more particulars, but would just now hint at what is a very important matter; for although we do not think that serious consequences to the extent of the evils which have happened in the East will occur in England; still, there is great necessity, for the reasons above mentioned, that the springs which supply our rivers, and also the streams, should be most carefully attended to; and if it should be proved that trees and other vegetation promote their flow, these should, as much as possible, be encouraged.

MONUMENT, LIMERICK CATHEDRAL.

A MONUMENT has been erected in this interesting structure in memory of the late Mr. Westropp. It is placed upon the blank wall of the south transept, bears no inscription, and is in the style of the transept itself, thirteenth century. It is 12 feet 6 inches wide, and 12 feet high, and projects nearly 2 feet from the face of the wall. It is a triple arcade containing three subjects from the life of our Saviour, sculptured in high relief; namely, 1st, "The Agony in the Garden;" 2nd, "The Resurrection;" 3rd, "The Entombment." These sculptures are by Mr. James Redfern, of London. The second is the principal subject: our Saviour is stepping out of the sepulchre door from which an angel has removed the stone: beneath are the Roman soldier guards, one of whom is shown awaking in affright. The monument begins three yards above the floor, with four pairs of bold corbels, with mouldings and carvings: these are of Bolsover stone: the rest of the structure is of Caen stone. Upon the corbels is a string-course: above this is the enriched sill, which carries the large slabs of sculpture: separating the subjects are jambs having double pillars of the red variegated alabaster from Staffordshire. These are divided into two heights by enriched bands of stone: the side jambs have carved panels and are decorated with facetted gems, being selected specimens of Sienna marble, with green marble from Connemara. The whole of the columns and jambs are surmounted with delicately carved capitals, from which spring the three arches. The fronts of the arches are covered with foliage, carved in high relief: above all is a triple gablet terminating in carved crockets and finials. The roof is of slabs of stone, enriched with a pattern incised thereon, and filled in with coloured cement. It was designed by Mr. Slater, and executed by Messrs. Henry Poole & Son, of Westminster. Part of the monument was in the International Exhibition. Mrs. Westropp, at whose expense the monument has been erected, had previously set up a stained-glass window in memory of her husband, and has given, we are told, more than 13,000*l.* in aid of local charities.

LIVERPOOL ARCHITECTURAL SOCIETY.

THE annual excursion was made on the 4th inst. Eaton Hall and Chester were the places visited. At the latter St. John's church, now under process of restoration by Mr. Hussey, was specially examined. The members and their friends, to the number of about sixty, afterwards dined at the Albion Hotel, under the chairmanship Mr. W. H. Weightman (president of the Society), of Mr. T. J. Kilpin occupying the vice-chair. The Bishop of Chester favoured the company with his presence, and there were also present the Rev. W. B. Marsden, Messrs. J. A. Picton, Hermann, G. A. Audsley, W. H. Picton, J. P. Bradley, F. Horner, F. Howard, G. Watts, E. A. Heffer, F. Frodsham, E. Stirling, J. Justin, &c. &c.

The Bishop of Chester proposed "Success to the Liverpool Architectural and Archæological Society," coupling with the toast the name of the president. He attached a high value to the influence and beneficial effects of such a society as that, not only in its tendency to improve architectural science, but also because it brought together men engaged in common pursuits, and promoted good feeling one towards another. It was a happy circumstance that concurrently with the revival of religious feeling which had led to the building or restoration of so many churches in Liverpool and other parts of the diocese, there had also been a revival in ecclesiastical architecture; and whether it was a large church in some great town, or a small chapel in some little hamlet, the erections were for the most part of a character to ornament and not to disfigure, and such as would reflect credit upon those who designed them as well as upon those whose munificence had reared them.

Various other toasts followed, including "The Contractors;" Mr. Justin, the librarian; and the "Good old Town of Liverpool."

PUBLIC WORKS.

SIR M. PETO has called the attention of the House of Commons to the want of efficient control in the public works of the country, and to the necessity for the organisation of a Board of Works, with a view to remedy the evil. The First Commissioner of Works, he remarked, was no commissioner of public works at all, nor was his office at all connected with the public works of the country. He had the charge of a number of public buildings, palaces, and parks in Great Britain, and that was all; and the public works of each department of the Government were really conducted by that department itself. Take the case of the Admiralty. If a dock were wanted, or a pier to be repaired, or a quay to be constructed, the work was done directly by the Admiralty. They might take a lesson in this matter from a neighbouring country, where a real Minister of Public Works was established, presided over by a responsible head, and assisted by the best professional ability and experience, and to whom all requisitions for public works were addressed by the departments. Under that system the public works were well executed at fixed and moderate estimates. What he proposed was that the First Commissioner of Works should be a commissioner of public works, always associated with the ministry of the day, having full power of executing the public works of the country under the sanction of and responsible to that House. He was also of opinion that public works should not be conducted by the Board of Trade, as they sometimes were, nor under the administration of the Horse Guards. It was a fact that 67,000*l.* a year was paid to clerks through the Horse Guards for the superintendence of public works; and that in some instances the remuneration paid to the clerks exceeded the cost of the work itself. He hoped that the Government would take this subject into consideration during the recess, with a view to remodelling the existing Office of Works, and making it a board under a responsible minister of the Crown.

Mr. B. Cochrane was glad that the hon. baronet, though not present when a similar motion was discussed the other evening, had borne his testimony to the absurdity of the present system.

After Sir C. Wood and others had spoken,

Mr. Cowper said he did not think it possible that engineering works could be adequately conducted by the department of the Office of Works. For instance, in the case of harbours, it must be the naval authorities who must be the judges of what was wanted with respect to them. The permanent officers of an establishment could not, by the constitution under which we lived, propose votes to Parliament; and they must get some department of the Government to propose to Parliament those measures which they considered were necessary. He did not think a permanent council would be of use in the conduct of the ordinary business of the Office of Works; but in regard to all selections of designs for great works, he agreed that a permanent council was very desirable, and he said that, practically, they had it already. If a permanent council were established there would be a want of competent control. He felt it much better to nominate on occasions the advisers who might be required. There was in the profession of architects such a strong party spirit that there would be great difficulty in naming any body of men as advisers who would give general satisfaction. The works that had been executed during the time he held office were not those which the hon. member had been able to attack.

COMPETITIONS.

Gateshead Townhall.—The committee named for the first premium, as we have already stated, Mr. Johnstone's design, estimated at 8,700*l.*; and gave the second premium to the design sent by Mr. J. E. Watson, estimated at 25,000*l.* The town-council at their last meeting reversed the award, giving the first premium to Mr. Watson and the second to Mr. Johnstone. The council, we are sorry to hear, intimated an intention not to employ the successful competitor to carry out his design, but to place the drawings in the hands of the Town Surveyor for that purpose. This would be equally unjust and unwise. Architects do not compete for the premium, as we have said to committees a hundred times, but for the professional employment involved in carrying the design into execution. The successful competitor, unless incompetent, should unquestionably be employed. Moreover, it is not likely that the town would obtain an equally satisfactory result by any other means.

Militia Stores, Bath.—A correspondent writes as follows:—I think it as well to warn intending competitors for the above, that plans have already been prepared by the city architect for the colonel of the regiment, although they could not be carried at the Quarter Sessions without the *form* of a competition.—BATHONIENSIS.

Newbury: St. Mary's Almshouses. — Several designs were sent in, and from these one by Mr. J. H. Money, architect, has been selected.

CHURCH-BUILDING NEWS.

Long Buckby (Northants).—The church of Long Buckby, which had been closed for restoration during the last eight months, has now been re-opened by the Bishop of Lichfield. The former galleries have been removed, and the belfry thrown open; the screen removed from the chancel, the arches restored, and the roof panelled. A stained-glass window is in the chancel, which is floored with Minton's encaustic tiles, the gift of the Rev. C. L. Yate, the father of the present vicar, as a memorial of his daughter. The pews have all been removed, and open sittings substituted, a large portion of which are free. The architect was Mr. Scott. The entire cost of the restoration will be nearly 2,000*l.*; and, when the present work in hand is finished, more will remain to be done.

Stamford.—The foundation-stone of a new Roman Catholic Church has been laid at Stamford, by the Roman Catholic Bishop of Nottingham. The contractors are Messrs. Halliday & Cave, of Greetham, Oakham. Mr. G. Walters is foreman of Works.

Dedworth.—All Saints' Church, in the hamlet of Dedworth, has been consecrated by the Bishop of Oxford. This edifice has been erected at the exclusive cost of the husband and children o the late Mrs. Tudor, mother of the Rev. H. Tudor

curate of Clewer, as a "memorial church" in commemoration of that lady.

Reading.—The work of enlarging and improving the old church of St. Mary has been commenced. Having removed some panelling at the south-east corner of the chancel, a very ancient piscina and credence, with shelf, were disclosed, and, adjoining, a recess for locking up the vessels. The arches are pointed, and in the Early English style, proving the erection to have taken place in the twelfth century. There are slight traces of colouring about the work, and a portion of the material is chalk.

Bearsted.—The ancient Church of the Holy Rood, or Holy Cross, mainly of the Decorated period with Perpendicular additions, it is proposed by the vicar should receive immediate restoration. Offers of liberal help have been already received.

King's Norton.—The first stone of a new school-church has been laid at Stirchley-street, King's Norton. The plans and specifications were received from Mr. C. W. Orford, architect, who estimated that the expense of carrying out the plan would be about 800*l.* The plan and specification have been placed in the hands of Mr. Isaac Clulee, builder.

Swansea.—The foundation-stone of St. James's new church has been laid. The site is on the Ffynone Estate, near the junction of the new road with the old road to Sketty, and the building will contain sittings for upwards of 600 persons. The cost, including tower and spire, will be about 3,500*l.*; exclusive of tower and spire, 2,500*l.*

Cardigan.—The new memorial church of St. Barnabas, at Penboyr, in the county of Cardigan, was consecrated on the 3rd instant by the Bishop of St. David's. The church, which is in the Early English style of architecture, was erected at the expense of the Earl of Cawdor, in furtherance of the intention of the late earl to erect a church in that part of the county. It consists of a nave, chancel, and apse, in the latter of which are three stained-glass windows, executed by Messrs. Heaton & Butler, and presented by the Countess Dowager of Cawdor. The walls of the church are built with stone from the local quarries, with Bath stone dressings. The font and pulpit are of Caen stone. The roofs are open-timbered, and covered with slates from the quarries at Newcastle-Emlyn. There is also a vestry on the north side of the chancel. Sittings are provided for about 250 people. The building has been carried out, from the designs of Mr. D. Brandon, by Mr. James Rogers, builder, of Tenby, in Pembrokeshire. The stone-carving of the chancel and on the exterior of the building, was executed by Mr. Peter Ford, of Cheadle, in Staffordshire.

Eardisley (*Hereford*).—The parish church here has been restored and re-opened. The south wall of the chancel had to be entirely rebuilt, and singularly enough, says our authority, the *Hereford Times*, the old wall was found to have had no foundation, having been erected on the surface of the ground. The flooring was all taken up, concreted throughout, and the monumental slabs, which entirely formed the pavement, were re-laid in their original positions. The church was also newly roofed throughout with Russian deal, stained and varnished, and covered with stone. The church has been re-pewed throughout with pine, stained and varnished. Various other restorations have been effected; and the church has been seated for 511 persons. The cost is between 2,000*l.* and 3,000*l.* Mr. Ewan Christian was the architect employed; and Mr. T. Williams, of Canton, Cardiff, the builder.

Heaton Norris.—The new chancel which has been lately added to St. Thomas's Church is completed. The new building, which has been designed by Messrs. Shellard & Brown, architects, Manchester, is built, says the *Stockport Advertiser*, in the Gothic style of architecture; and the east window, which is after the model of a church in Kent, is shortly to be filled with stained glass (as a memorial), by M. Chapronier, stained glass manufacturer, Brussels. Seven other stained windows have been put in the chancel and nave by Messrs. Edmondson, of Manchester. The subjects are,—The Incredulity of St. Thomas, the arms of the Episcopate of the Church of England, the Last Supper, the Baptism of Our Lord, and figures of St. Peter and St. Paul. The west gallery is now made entirely free to the public. Messrs. J. & J. Longson were the builders employed on the interior improvements.

Bramley.—The new church of St. Margaret, at Bramley, has been consecrated. The new edifice is built in an open piece of ground near the National Schools, adjoining the highway leading from Bramley to the railway station. This site has been given by the Earl of Cardigan. The building is of broached dressed sandstone wallstone, with stone dressings, and its style is Geometric. It consists of nave, chancel, north and south aisles, and transepts, south porch, organ chapel at the east end of the north aisle, vestry at the east end of the south aisle, tower and spire at the north-west end of the north aisle, from which it stands out the breadth of itself. The nave is 85½ feet long by 24 feet wide, and 45 feet high to the apex of roof, and is divided from the aisles by five arches on each side. The north and south, aisles are respectively 66½ feet by 12½ feet and 32 feet high to the apex of the roof. There are four windows in each of the aisles, of two lights each, with shafts and carved capitals and small wheel in the head. The two transepts are 24½ feet by 19 feet, and 38 feet high to the apex of roofs, with two single-light windows and a wheel window above, in each of which the hexalpha symbol is introduced. The chancel is 28 feet by 20½ feet, and 42 feet high to the apex of roof. On the south side there are two two-light windows, with canopied heads, and on the north one two-light, with trefoil tracery heads. The east window consists of three single lights, with trefoil heads and hood moulding, divided by clustered shafts and carved capitals of very fine wrought stone. Over this there is a small vesica window. The tower is 20 feet square and 56 feet high: it consists of three stages, and is terminated by a pierced trefoil parapet, with pinnacles and gurgoyles at the angles. Above the parapet on each face rises a clock-dial, which forms the base of a spire, which rises to the height of 75 feet, making the entire altitude of tower and spire 131 feet. The whole of the roofs are open timbered. The chancel roof is filled with quatrefoil grounds in the bindings and the ceiling, and is formed of boards all stained. The whole of the pewing is of deal, stained, with bench ends terminated by cut heads. One of the windows in the south aisle has been filled with stained glass by Mr. Wailes, to the memory of the late Mr. John Rogerson, of Bramley, by his son. The church will accommodate 1,000 persons, and has cost, including gifts, 4,500*l.* The works have been carried out under the direction of Mr. John Kabery, clerk of works, by the following contractors; viz., mason, J. Chadwick, of Bramley; joiner, Tomlinson; plasterers, E. Garlick & Son; plumber, G. Dawson; slater, Watson, all of Leeds; painter, J. Dickinson, Bramley. Messrs. Perkin & Backhouse, of Leeds, have been the architects. The stone carving has been executed by Messrs. Mawer & Ingle, of Leeds. With suitable fence wall, iron rails, &c., and a new organ, the total outlay will have been 7,000*l.* We must add, that 500 of the church sittings will be free.

WESLEYAN CHAPEL BUILDING.

Alford (*Lincolnshire*).—The foundation stone of a new Wesleyan chapel has been laid at Hogsthorpe. The chapel is to seat 400 people, and to cost 800*l.* Mr. Botterill, of Hull, is the architect.

Market-Rasen.—The new Wesleyan Chapel, erected on the site of the old chapel, near the railway-station, has just been opened for divine service. It is in the Italian style, with Ionic portico of Ancaster stone in front, and three entrance-doorways, approached by a low flight of steps. The building generally is of brick, with stone dressings to the doorway and window openings, &c. The internal dimensions are—length, 75 feet; breadth, 44 feet; and height, from ground-floor to ceiling, 35 feet. There is a gallery on all sides, with space set apart for an organ behind the pulpit. The accommodation is for about 700 persons. In the rear of the chapel are a large school-room, vestry, and four class-rooms. The cost will be about 3,000*l.* The original contractor was Mr. H. Jackson, of Lincoln; but the works have been completed by Messrs. Wallis & Son, of Market-Rasen. Messrs. Stones & Co., of Hull, supplied the gas-fittings; and Mr. J. Redfern, of Hanley, the heating apparatus. Mr. W. Botterill, of Hull, was the architect.

Leicester.—The new Wesleyan Chapel in Humberstone-road is drawing near to completion. The architect, Mr. W. F. Ordish, in his design has gone so near to the ecclesiastical style of architecture, that were it not known that the structure is intended for a Dissenters' chapel it might easily be mistaken, externally and internally, for a Church of England Chapel-of-Ease. Being principally a brick building, a little more stone would have had a good effect. The contractor for the brickwork is Mr. H. T. Porter, of Leicester, who is also the manufacturer of the bricks. Messrs. Osborne, Brothers, of Leicester, are the stonemasons, and Mr. W. Clifton, also of Leicester, is the carpenter and joiner. Three different persons were selected to tender for the stone pulpit and screen:—Messrs. Osborne, Brothers, Mr. Matthew Irving, and Mr. Samuel Barfield. The last gentleman's tender being the lowest, the work was put into his hands.

Wolverhampton.—Trinity Wesleyan Chapel, which during the last nine months has been in course of erection on the Compton-road, has been opened. The edifice is in the Early English style, with hammer-dressed local stone and dressings of Bath stone. The principal feature in the design is a front towards the Compton-road, with a tower and spire at one angle, rising to a height of 115 feet. A large traceried window occupies the upper part of the principal front. The lower part has an arcade of stone arches and marble columns, with carved capitals inclosing circular windows and connecting the two principal entrance-doors of the chapel, which have arches and marble shafts to correspond with the arcade. The interior is arranged on the plan of a nave, aisles, and chancel, with organ-chamber and vestries on either side of the latter. Accommodation is provided for about 1,000 persons, nearly 300 free. A series of arches on iron columns, decorated, divides the nave from the aisles. The windows generally are glazed with toned cathedral glass, in quarry pattern. The glass is from the manufactory of Messrs. Hardman & Co. The chancel windows were from Messrs. Lavers & Barraud, of London. The entire cost of the building was about 3,600*l.*, exclusive of the land, which was given by Mr. Hartley, who also, in conjunction with Mr. J. Perks, sen., defrayed the expense of the Bath-stone spire. The architect is Mr. G. Bidlake, of Wolverhampton; and the contractors are Messrs. Trow & Son, of Wednesbury.

Clifton (*Bristol*).—The Wesleyan chapel adjoining the Academy of Fine Arts has been dedicated as a Wesleyan chapel. The chapel is a rectangular building, in the Gothic style, but many of its features are Continental in character. The enclosed ground is 200 feet long, with 100 feet frontage, and 57 feet at the back, the length of the building being 86 feet, and its breadth 39 feet. Its walls are 4 feet thick, and this is increased by the buttresses to 7 feet 6 inches. The frontage from the base to the top of the cross is 68 feet in height. It is supported by a moulded basement, with plinth of Bath stone, and a band of Clevedon yellow magnesian limestone runs through the jambs, moulding, and arcades: this band alternates with bands of Williton red sandstone, presented by Sir Peregrine Acland, and which run round the three fronts of the building above the string courses, relieving the appearance of the freestone. There are three windows in the frontage, the centre one being 30 feet high, and the side one 24 feet, including the sill and mouldings. The cathedral glass has been given by Messrs. Hall, of Broadmead; and the windows are ornamented with diagrams, and in the glass of the tracery there are medallions and other geometrical figures. The windows at the side of the building are six in number, and ornamented with medallions, &c. The circular window in the gable of the east end is of stained glass, presented by Messrs. Chance, of Birmingham, and consists of a wheel in trefoil. There is a succession of buttresses running the length of the sides, and there is also a freestone battlement at the top of the north and south sides of the building. The roof is of Welsh slate, and the ridge is surmounted with a spire covered with zinc, and containing a device for the escape of impure air. The building will accommodate 700 persons. There is a large room underneath, running the entire area of the chapel, and 15 feet high. It was made in consequence of the depth of the excavations required to obtain a good foundation; and the room, which will be used for tea-meetings, &c., is lighted by windows on either side, and approached by a sloping path on the south side of the chapel. On the same floor there is a vestry about 31 feet by 17 feet.

Alderley Edge (*Macclesfield Circuit*).—A new Wesleyan Chapel has been opened here. The chapel, after designs by Messrs. Hayley & Sons, of Manchester, is a Gothic structure, capable of seating 550 persons. The estimated cost, including land, is about 4,000*l.*

Rotherham.—The corner stone of a new Wesleyan chapel, about to be erected at Mortomley, near Chapel-town, has been laid. The new chapel is to be in the Gothic style, and capable of seating 400 persons. Its cost is estimated at 1,000*l.* Mr. James Wilson, of Bath, is the architect; Mr. John Brierley, of Bolsterstone, the builder; while the joiners' and other work has been entrusted to Mr. Harrison.

Newcastle-upon-Tyne.—The foundation stone of a new chapel for the United Methodist Free Church has been laid in Gloucester-street, Scotswood-road, by Mrs. John Benson. The building will stand on a plot of ground 72 feet by 52 feet, and will be surrounded by iron palisading. The chapel itself will be 56 feet long by 42 feet broad, and will contain 600 sittings. It will be heated with hot water and lighted with "star lights." It will be surrounded on three sides by a gallery. Underneath will be a school-room for 300 children. The building will be of Tuscan architecture, the basement of pitch-faced blocking, and the remainder faced with brick and stone dressing. The principal entrance in Gloucester-street will have a polished stone porch. The entrance to the school-room will be in Cambridge-street. Pews will be in the bench style with open ends, and the whole of the wood work will be stained and varnished. The architect is Mr. G. Snaith, and the contractor for the building Mr. James Hogg. Messrs. Walker & Emley, of the Neville Iron Works, contract for the heating apparatus. The total cost is estimated at about 2,000*l.*

Maryport (Cumberland).—The foundation stone of a new Wesleyan chapel has been laid at Maryport. The church will front Wood-street, from which the entrance will have an easy descent. The building will be in the form of an octagon, and will accommodate between 400 and 500 people. The total cost is 1,305*l.* Mr. Eaglesfield, of Maryport, is the architect; Mr. Lucock, of Broughton Moor, the contractor for the masons' work; Mr. Peile, Workington, the wood work; Mr. Mandell, of Maryport, for the slating; Mr. Coulthard, of Maryport, for the glazing and plumbing; and Mr. Cowley, of Maryport, for the plastering.

Keswick.—In Southey-street, on the Penrith-road, a new Wesleyan chapel is in a forward state of progress. The architect is Mr. John Ross, of Darlington; and the builders are Messrs. Hodgson, of Keswick. The chief stone has just been laid.

STAINED GLASS.

All Saints', Loughborough.—The west window has been filled in, at the expense of Mr. and Miss Herrick, of Beaumanor, who took upon themselves the charge of the restoration of the tower. The window is of the Perpendicular period, divided by intersecting mullions into fifteen compartments. Each of these contains a separate figure, differently draped and posed. The design of the central compartments represents Our Lord's descent through Abraham and David, the figure of Abraham occupying the lowest of the three. Immediately above him is David, and that of the Saviour may be recognized in the uppermost section. The Evangelists, Matthew, Mark, Luke, and John, stand on either side of Our Lord, two on the right, and two on the left hand. John the Baptist and St. Stephen occupy compartments on the right and left of David, while St. Peter stands on the other side of the Baptist, and St. Paul beside St. Stephen. Two greater prophets of the old dispensation, who spoke most distinctly of the times of the Messiah—Isaiah and Daniel,—are the figures immediately to the right and left of Abraham; Moses and Aaron filling up the extreme compartments in the lowest row. Each of these figures is surmounted by painted canopy-work. The tracery in the window-head is filled with small figures of angels and cherubs, attending, as it were, on the Saviour. Messrs. Ward & Hughes, of London, were the artists.

Irnham Church (Lincolnshire).—The east chancel window of this church, which is of the Decorated (fourteenth century) period, and measures 18 feet in height by 8 feet in width, has just been filled with painted and stained glass by Messrs. Baillie & Co., of London, at the expense of Mrs. Hervey Woodhouse, of No. 1, Upper Grosvenor-street, London. The window contains three lower or principal openings, each with a lancet-shaped top, which support a tracery head composed of one quatrefoil and two trefoils, with pierced eyelets and spandril shapes. The design of the stained glass is to represent the Crucifixion.

Harlaston Church, near Tamworth. — Two stained glass windows have been fixed in this church, containing the following subjects under canopies:—"The Presentation in the Temple," "Good Shepherd," "Christ Blessing Little Children," and "The Divine Master." The windows were executed by Mr. W. Holland, Warwick.

St. Mary's Church, Guildford, Surrey. — A stained glass window of three openings has been placed in the chancel of this church, containing the figures of our Saviour, St. Mary, St. Matthew, St. John, and St. Paul, under canopies. In tracery, Angel bearing the emblem of the Trinity, and foliated ornament. Also a memorial window in the Early English style, containing the figures of the Virgin and Child, upon pedestal containing monogram, &c., &c.; and a small square window representing "Our Saviour cleansing the Ten Lepers;" the whole executed by Mr. Holland, of Warwick.

St. Matthew's Church, Knot Mill, Manchester.—The large east window in the chancel of this church has been filled with stained glass, at the sole expense of one of the congregation. The window is of three principal lights, each upwards of 3 feet wide, with rather peculiar tracery openings in the head. Each light contains a subject. On the left is "The Baptism of our Lord by John." In the light on the right hand is represented the celebration of "The Last Supper." In the centre is "The Ascension,"—"I go to the Father." Each subject is surmounted with foliated canopy work. Six openings in the tracery, immediately above the principal subjects, are filled with six angels, bearing each an emblem of the Passion of our Lord. In two other openings are two angels bearing scrolls, inscribed "Ye men of Galilee, why stand ye gazing," &c. Above these, and in the top space, is our Lord seated in glory. The artists were Messrs. Edmundson & Son, of Manchester.

Doncaster Church.—A memorial window to the late Mr. James Dunhill has been put up by Messrs. Ward & Hughes, of London, at the south-west corner of this church. The tracery of the window and the heads of each of the three lights are filled with foliage; and in the small wheel in the centre of the tracery are the letters "I. H. S." The middle light represents David playing upon the harp, and above are three angels bearing a scroll, on which is inscribed "Hallelujah." The two side lights give prominence to one subject. In the left is a representation of Nathanael addressing Philip, "Can any good thing come out of Nazareth?" and Philip's reply, "Come and see." In the right Philip is bringing Nathanael to Jesus, who said of him, "Behold an Israelite indeed, in whom is no guile."

PREMIUMS GIVEN BY INSTITUTION OF CIVIL ENGINEERS.

THE Council of the Institution of Civil Engineers have awarded the following premiums for "papers" read at the meetings during the session 1862-63:—

1. A Telford Medal, and a Telford Premium, in Books, to John Brunton, for his "Description of the Line and Works of the Scinde Railway."

2. A Telford Medal, and a Telford Premium, in Books, to James Robert Mosse, for his paper "On American Timber Bridges."

3. A Telford Medal, and a Telford Premium, in Books, to Zerah Colburn, for his paper "On American Iron Bridges."

4. A Telford Medal, and a Telford Premium, in Books, to Harrison Hayter, for his paper "On the Charing-cross Bridge."

5. A Telford Premium, in Books, to William Michael Peniston, for his paper "On Public Works in Pernambuco, in the Empire of Brazil."

6. A Telford Premium, in Books, to William Henry Preece, for his paper "On Railway Telegraphs, and the Application of Electricity to the Signalling and Working of Trains."

7. A Telford Premium, in Books, to Alexander Woodlands Makinson, for his paper "On some of the Internal Disturbing Forces of Locomotive Engines."

8. A Telford Premium, in Books, to Daniel Miller, for his paper "On Structures in the Sea, without Cofferdams, with a Description of the Works of the New Albert Harbour at Greenock."

9. A Telford Premium, in Books, to Robert Crawford, for his paper "On the Railway System of Germany."

10. A Telford Premium, in Books, to William Cudworth, for his paper "On the Hownes Gill Viaduct, on the Stockton and Darlington Railway."

11. A Telford Premium, in Books, to James Grant Fraser, for his paper "Description of the Lydgate and of the Buckhorn Weston Railway Tunnels."

12. A Watt Medal, and the Manby Premium, in Books, to John Fernie, for his paper "On the Manufacture of Duplicate Machines and Engines."

COPPER TUBES.—At the Seamless Copper Tube Works at Morrissania, New York, pure copper is cast into sound tubular ingots by running the metal into moulds, revolving 2,000 times in a minute.

BRIBING FOR PRACTICE.

MR. EDITOR,—I find the following in a London daily newspaper:—

"An Architect and Surveyor, in good practice, would treat liberally with parties introducing Clients.—Address, Mr. ——, &c."

Is this the way to practise a liberal profession? and is it certain that a person inserting such an advertisement would treat his clients "liberally" as well as those who introduced them? Of course it means one of two things: either Mr. *Blank* intends to work for less than his professional brethren, or he proposes to make his clients themselves, when he gets them, pay the bribe he offers for securing them.

AN ARCHITECT WHO WISHES TO REMAIN A GENTLEMAN.

ST. PAUL'S CATHEDRAL.

TWO separate appeals have been made by the Dean and Chapter of St. Paul's to the British public, the one setting forth their contemplated plans for completing the decoration of the cathedral; and the other soliciting a "national subscription" for the accomplishment of this great object, limited to one guinea.

It is in order to give publicity to these appeals that I request (as one of the oldest subscribers to your valuable publication) your influence and support to an undertaking which every Englishman imbued with a proper sense of religion and a lover of art is bound to second and uphold.

St. Paul's is the only cathedral which Protestant munificence has (as yet) raised in England to the glory of God; and it has long been felt as a well-merited reproach upon Protestantism that so magnificent a structure should have been permitted to remain for so great a length of time in its present unfinished condition.

To wipe away this reproach the Dean and Chapter are using their most earnest endeavours; and it consequently behoves the laity to second them in this great work of national piety.

In the full conviction that you will aid the good cause by giving publicity to this letter, I have the honour to remain, your very obedient servant,

ECCLESIASTICUS.

DESCRIPTIVE ARCHITECTURAL DRAWING, AND THE PUBLIC.

SIR,—From a most praiseworthy and wholesome article in your last number, it is evident that some one at least has at length found out and pointed out the inconvenience—and mortification, also—redounding to architects from the inability of those who, though not architects, sway the destinies of architecture, to perfectly comprehend, just as well as a practical and professional man, all the multifarious drawings required for fully explaining a complete design. However much it may be matter for regret, it is none at all for wonder, that until the well-educated classes become far better acquainted than at present with all the several modes of technical description, architectural designs should be caviare to the public,—not only to the million, but the upper ten thousand likewise.

With arrogance discreditable to itself, the *Saturday Review* has asserted unexecuted designs to be "mere bubbles." With the *Saturday* an architect's brainwork stands for just nothing: imagination, fancy, taste, when so shown, is no better than 0 0 0. Charming doctrine, truly! vastly encouraging and inspiriting! according to which any committee of prigs may put an extinguisher upon a rejected design, however preferable to the accepted one. Though my pen itches to say a great deal more, I, perforce, in my present ignorance of what I have already said, abstain, and only sign myself

ZERO.

ARCHITECTURAL COPYRIGHT.

MR. BLACK, M.P., having given notice in the House of Commons of his intention to move, in the next session of Parliament, that he be allowed to bring in a Bill to consolidate and amend our copyright law (some remarks of mine as to which, with special reference to copyright in architectural designs, you introduced into your columns), I have forwarded the following suggestions on the subject for his consideration; and as they are, I submit, worthy of discussion, I venture to hope you will find a place for them in your columns.

First, it appears to me, there should be but one copyright Act, regulating copyright in all literary

productions; in paintings, engravings, etchings, lithographs, &c.; in sculpture, carvings, artistic casts, and designs; in photographs, and all original artistic productions; also in *architectural designs*.

Secondly, that one registration, of a simple character, before any claim at law can be established, should be required.

Thirdly, that *fac simile*, or nearly *fac simile*, representations of things, natural or artificial, by the use of photographic apparatus or other means of producing such representations, should have a copyright for a very short time only; for it is scarcely maintainable that the production of such representations, in such manner, and by such means, involves the exercise of authorship; and I submit there can scarcely be a true basis for copyright without authorship. It will become a crying grievance if a photographic manipulator, by being the first in the field, can secure to himself alone the copyright of mere representations of the portraits of our public characters and our most pleasing landscapes.

Lastly, with regard to *architectural designs*. The right to build in accordance with any copyright design should, I think, be subject to be reserved to the author or designer, in the same way and upon somewhat similar conditions as the right of translation in literary matter is now reserved, so that hereby it may be provided that, if the author or originator of the design do not build, or cause or procure others to build, according to his design, within a restricted period, he shall not at the end of that period be able to prevent others from doing so. His copyright in all other respects to remain intact.

I trust this may lead to the discussion of this important subject. F. W. CAMPIN.

THE LINING OF WATER TANKS.

SIR,—In order to retain a good supply of rain-water for domestic use I have sunk two tanks in the earth, each 15 feet deep, and 6 feet diameter, and have based them with brickwork built and lined ¾ inch thick with Roman cement, and covered them in air-tight, and no other water than rain can get in them; but I find the water (after being in these tanks) becomes so hard that it is almost useless for washing. If any of your readers can kindly point out a remedy for this they will greatly oblige A SUBSCRIBER.

THREATENED DESTRUCTION OF THE DUTCH CHURCH, AUSTIN FRIARS.

TENDERS were to be received on Thursday last for the erection of a new structure in lieu of the ancient church in Austin Friars, which now stands roofless, in consequence of the recent fire there, but in other respects is much as it has been for many many years.* It is to be hoped that it may not be too late to induce the trustees to give up their demolishing intention, and restore the old church, instead of building a new one. The money they are about to spend would surely do this efficiently. The main columns are out of upright, apparently driven out by the roof; but there would seem to be no great difficulty in setting these right and making all secure. The windows, Decorated, are large and handsome. The Society of Antiquaries, and other similar bodies, should use their influence to prevent the threatened destruction. There is already little enough left of Old London. It is our duty to preserve for posterity, as far as possible, all that remains. If the Dutch Church in Austin Friars be knocked down, it will be an act of Vandalism for which men, hereafter, will cry shame on those concerned in it.

* Some rough illustrations of this church will be found in the second volume of the *Builder*.

WORKING MEN'S CLUB AND INSTITUTE UNION.

THE first annual meeting of the members and supporters of the Working Men's Club and Institute Union has been held at Burlington House-Piccadilly. Lord Brougham, the president, occupied the chair. The report stated that the union had been formed for the purpose of helping working men to establish clubs or institutes where they could meet for conversation, business, or mental improvement, with the means of recreation and refreshment, free from the temptations of the public-house; these clubs, at the same time, constituting societies for mutual helpfulness in various ways. The union had now been in existence about a year, and in active operation for the last nine months. Twenty-three clubs had been established in the metropolis and country by the union, and the number of members on their books may be estimated at about 1,760. The finance statement showed the total income for the past nine months to amount to 730*l*. 16s. 3d.; and after meeting expenditure and liabilities, an available balance of 175*l*. 13s. 3d. would remain. The Chairman expressed his astonishment that no substitutes for alehouses had been found. Working men, he conceived, went to the public-house not solely for the purpose of drinking, but to obtain that comfort and companionship they could not find in their own homes. He did not wish to take working men from their homes, but he desired to establish places in which they would have intellectual and rational amusement, and which would have the effect of withdrawing them from the alehouses. The Hon. Mr. Cowper, M.P., said, the Working Men's Club might be consider. d as a public-house without the drinking part. He earnestly hoped the movement would be successful. After the meeting a number of the members and friends of the union dined together at the Whittington Club, under the presidency of Lord Lyttelton.

DECISIONS UNDER METROPOLITAN BUILDING ACT.

DEFAULT OF NOTICE.

MR. WILLIAM BLOW, of Bell-yard, Gracechurch-street, builder, was summoned before the Lord Mayor (at the Mansion House) for neglecting to give due notice to the district surveyor of certain works which were in progress under his superintendence at Lake's dining-rooms, in Gracechurch-street, as required by the Metropolitan Building Act, whereby he had incurred a penalty not exceeding 20*l*.

Mr. Edmund Woodthorpe, the district surveyor, said that in consequence of two momentous fires having occurred in the City of London from the erection of a new description of range in communication with old flues, in the construction of which a large quantity of timber had been used, he had exercised more than ordinary vigilance over works of that kind; and, as Mr. Blow was known to be extensively engaged in the construction of these ranges, he had felt it his duty to summon him for having omitted to comply with the provisions of the Act of Parliament.

Mr. Blow explained that, on commencing the work at Lake's dining-rooms, he gave the requisite notice; but it having afterwards become necessary to pull down the chimney and rebuild it, he certainly did neglect to give a second notice.

Mr. Goodman pointed out that, by the 38th clause of the Act, the two days' notice was required not only previous to the commencement of any work; but that if, after the commencement such work should be suspended for any period exceeding three months, two days' notice of the intention to resume it should be given to the district surveyor.

Mr. Woodthorpe said he did not wish to press for the full penalty, and

The Lord Mayor fined the defendant 20s. and costs.

Books Received.

VARIORUM.

PAPERS upon the Drainage of the Fens and the Inundation of Marsh Land. By Baldwin Latham, C.E., Ely. These papers were read before the Society of Engineers, and the Society's premium was awarded them. They contain a detailed and interesting account of the fen drainage and inundation, illustrated by engravings of the syphons, dams, sluices, and other works, and a map of the fen district.——The Mines of South Australia. By J. B. Austin. Adelaide, C. Platts, &c. London: Longman & Co. 1863. This is rather a popular than a strictly scientific work: it is interspersed with incidents of travel in the bush, and a brief description of the country. The smelting-works throughout the colony are also described; and the whole is illustrated by a map of the mining district. The author has been connected with the Adelaide press, and his book is both interesting and well written.——Part V. of A Dictionary of Chemistry. By Henry Watts, F.C.S. Carbon—Chyle. London: Longman & Co. 1863. This Dictionary, which has before been favourably noticed in the *Builder*, is, it may be remembered, based on that of the late Dr. Ure; but in truth it is mostly new. The present part sustains its previous promise as an accurate and valuable scientific work. Still, we can see something like an occasional defect or error among its multifarious contents. Is it correct, for example, to state that "no compound of carbon and iodine has yet been obtained?" We are quite well aware that one fluid combination of carbon, iodine, and hydrogen, namely, iodoform,—an analogue of chloroform,—was at one time mistaken for a mere combination of carbon and iodine; but a solid foliated coppery-looking sublimate has also been formed from carbon and iodine, and regarded as a pure iodide of carbon. The substance, we believe, has been rarely seen; but it is described by some chemical authorities; and we know of no reason for doubting its composition, although, before its discovery, the fluid compound was mistakenly regarded as a pure iodide of carbon. In another part of the "Dictionary" (chlorine, page 905), the writers speak of "chlorate of potassium." Is that quite correct? We have always been accustomed to speak of chlorate of potash or chlorate of potassa, although of chlor*ide* of potassium; and as oxygen will assuredly *not* unite with the chlorine of such a combination without also uniting with the potassium for which it has so much stronger an affinity,—thus converting the potassium into potassa or potash, as well as the chlorine into oxychloric acid,—the correct nomenclature must assuredly be chlorate of potassa, or chlorate of potash, and not chlorate of potassium. There are such things as innovations on older forms of science which are no improvement on them.

Miscellanea.

CHIEF CONSTRUCTOR OF THE NAVY.—Mr. E. J. Reed has been nominated by the Duke of Somerset to be Chief Constructor of the Navy, vice Mr. Isaac Watts, C.B., retired.

GAS LIGHT FROM A NEW SOURCE.—An eccentric philosopher at Bombay proposes the lighting of his city by gas manufactured from dead Hindoos. He says each body would yield 200 cubic feet of gas: stout ones would yield much more. Now eight rupees (16s.) per 1,000 cubic feet would be a moderate charge; therefore, in a monetary point of view, it is calculated that the scheme would pay. Gas originally meant spirit: we suppose the light thus obtainable might be called the shining spirits of deceased Hindoos.

GAS.—The directors of the Peterborough Gas Company recommend a dividend of 8½ per cent. A lowering of meter rents, they report, has increased the number of gas consumers.——The Worcester Gas Company announce a reduction in price to 4s. 6d.——The Bristol Gas Company, in reply to the committee of the Bristol Gas Consumers' Association, have declined to reduce the price to 3s., or to accede to other requirements made by the committee. The latter mean to apply to Parliament for a Bill next session to incorporate a rival company.——The Halesworth Gaslight Company have declared a dividend of 7*l*. 10s. per cent., "which, considering the mildness of the winter, and the fact that the company last year reduced the price of gas 10d. per 1,000 feet, cannot fail to be satisfactory to both shareholders and consumers."——The Galashiels Gas Company have declared a dividend of 7½ per cent., and reduced their charge from 6s. 5½d. to 5s. 10d. ——The Brechin Gas Company have declared a dividend of 10 per cent.

THE FEMALE SCHOOL OF ART.—The distribution of prizes to the successful students belonging to the Female School of Art, took place at University College. Viscount Stratford de Redcliffe presided, and distributed the prizes. The chairman, in opening the proceedings, said the fact of the school being under the special patronage of the Queen was one of the many illustrations of her Majesty's benevolence, and showed that the school was deserving of her countenance. It was the desire of the friends of the school that it should be self-supporting, and he would greatly rejoice when that result was accomplished. He understood that if thirty or forty additional pupils were obtained the school would be enabled to support itself. He hoped that in the interval that must elapse between the withdrawal of Government assistance and the time when the school might be expected to maintain itself it would be well supported by public subscriptions. He was glad of the steady progress it had made. The report was then read. It gave an encouraging account of the progress of the school, and stated that the number attending was 110. As many as thirty medals were to be distributed, which was the highest number that by the rules could be earned.

RAILWAY RETURNS.—The traffic receipts of railways in the United Kingdom amounted, for the week ending the 27th of June, on 10,684 miles, to 606,155*l.*, and for the corresponding week of last year, on 10,237 miles, to 597,315*l.*; showing an increase of 447 miles, and of 8,840*l.* in the receipts. On the Great Northern there was a decrease of 1,565*l.*

THE YARMOUTH TOWN SURVEYORSHIP.—Mr. A. W. Morant, the town surveyor of Yarmouth, has tendered his resignation to the Local Board of Health, in consequence of continuing ill health. The resignation, however, has not been accepted, but leave of absence has been granted for twelve months; Mr. Morant's clerk, Mr. Baker, having been appointed surveyor, *pro tem.*

PROPOSED IMPROVEMENTS IN LIVERPOOL.—The town-council have resolved "To apply to Parliament, in the next session, for powers to effect improvements;—viz., to widen Church-street on the south side, from Paradise-street to Church-alley, including St. Peter's-churchyard; to make an improved street, by widening Temple-court, &c., from North John street to Sir Thomas's-buildings, and from Preston-street to the bottom of Manchester-street; to purchase the property between the land of the corporation on the east side of the new street and Whitechapel, from Sir Thomas's-buildings to Preston-street; to carry a high-level road from the Free Library and Museum to Dale-street, near the end of Hatton-garden, as shown on the plan; and to widen the road in Everton village." The total net cost of effecting all these improvements is 226,000*l.*

SALES OF PROPERTY AT THE MART.—By Messrs. Norton, Hoggart, & Trist:—freehold, "Esher-place" estate, Surrey, comprising mansion, farm-buildings, &c., the whole containing about 160a., sold for 42,500*l.*; freehold, Sandown Farm, Esher, farm-house, &c., and about 119a. arable and pasture land, 19,800*l.*; freehold, Weyland's Farm, in the parish of Walton, farm-house, &c., about 284a. arable and pasture land, 17,000*l.*; freehold, known as "Walton Lodge Farm," Walton-upon-Thames, comprising residence, farm-buildings, &c., and about 247 acres of land, 20,000*l.*; freehold enclosure of meadowland at Edmonton, 2a. 3r. 16*p.*, 690*l.* By Messrs. Chinnock & Galsworthy:—freehold residence, Nos. 1 and 2, Clarence-villas, New Windsor, 1,220*l.*; freehold ground-rent of 25*l.* 4s., arising out of a piece of ground in Dorset-road, New Windsor, 480*l.*; freehold ground-rent of 12*l.* 12s., rising out of a piece of land in Trinity-road, New Windsor, 250*l.* By Messrs. Dann & Son:—freehold, "Cold Harbour" farm, Swanley, Kent, comprising residence, farm buildings, &c., and about 20a. land, 17,300*l.* By Mr. Robins:—freehold, six acres, orchard, and garden-ground, Whittonane, Twickenham, 1,050*l.*

THE BRITISH MUSEUM.—In Committee of Supply in the Commons last week, Mr. Walpole moved that a sum of 65,541*l.* be granted to complete the vote of 90,541*l.* for the British Museum. There was in the vote a large diminution. The estimate for 1862-3 was 99,012*l.*, so that this year the diminution was 8,741*l.* The temporary diminution partly arose from want of accommodation. Nevertheless, Mr. Walpole seemed to congratulate the House on the diminution of building expenditure since the trustees had the control of the works. Mr. Ayrton urged the opening of the Museum by gas light in the evenings, and especially on Monday evenings. Mr. Locke suggested Sunday afternoons as the time best suited to the working classes. Mr. Coningham thought the stuffed birds and beasts ought to be removed to some place where they at least could be exhibited to the public at fitting times, and the Museum more exclusively devoted to science and art. Mr. Walpole said he was anxious that the Museum should be open in the evenings if it could be done, but his firm belief was that it could not be done with safety. He referred to the evidence of Mr. Braidwood to show that the gas used in lighting the building would render the materials more combustible than they are at present, and would discolour the contents; and he did not suppose that any one would think of incurring the enormous expense of lighting it with oil. They did open the Museum during the summer months to eight o'clock, and what was the result? From ten to six o'clock 5,200 persons attended, being 650 persons per hour. From seven to eight o'clock 27 persons attended per hour, and the cost was 7*l.* 10s. per night. Mr. Ayrton affirmed that the British Museum afforded singular facilities for being lighted with gas without endangering the building or causing any of the evils referred to. He hoped the trustees would consider the question. The vote was agreed to.

ROYAL GALLERY OF ILLUSTRATION.—Mr. and Mrs. German Reed's Entertainment is enjoying a very prosperous career. Out of the simplest of plots they contrive to excite a lively and continued interest. Each impersonation, indeed, has its special attraction, success depending more upon the ability of the performer than upon a sequence of incidents arranged for dramatic effect. We understand there will be other visitors tomorrow at the *Charming Cottage*, the Sisters Fry having been prevailed upon to call at Windsor as they formerly came to Richmond.

EXHIBITION OF WOOD CARVINGS, SOCIETY OF ARTS.—We are requested to say that it was not at the instance of the Society of Wood Carvers, as a body, that the determination of holding another exhibition of wood carvings was arrived at. No matter who urged it, or who did not, it is a very good determination. The secretary of the Wood Carvers' Society adds,—"There is no doubt that the Wood Carvers' Society will not be found wanting in rendering all the assistance that lies in their power." They would be a very foolish society if they did not do so.

BURIED ALIVE IN A WELL.—A shocking and fatal accident has occurred in St. George's-place, Birmingham. A well-sinker contracted to deepen a well, situate in a yard in this locality. The well was about 19 yards deep, and it was contemplated to sink it about a yard deeper. In removing the old brickwork the side fell in, burying one of the workmen. The materials fell in a sort of dome form, thus for a time protecting the poor fellow below; but from a natural anxiety on his father's part to assist in his extrication, and after even a little brandy had been handed him, the bricks fell upon him and killed him, and it was a work of several hours to get the body out.

DESTRUCTION OF PORTLAND BAZAAR AND GERMAN FAIR BY FIRE.—An extensive fire occurred in Langham-street, Regent-street, on Sunday last: it commenced about ten o'clock in the forenoon, and was not entirely extinguished at five o'clock in the evening. The building, termed the Portland Bazaar and German Fair, covered a space of ground nearly 1,000 feet square. It was only two floors high, but the property contained in the place was more than an ordinary observer would imagine. Of the grand bazaar all that can now be seen are the tottering external walls, and the iron pillars and girders which supported the gallery and roof; only a few of the pillars; and these are twisted and thrown into misshapen masses by the action of the heat.

ACCIDENTS.—A workman has been killed at Blackfriars-bridge of the London, Chatham, and Dover Railway, by falling, with a broken beam and other materials, into the bottom of an iron caisson. The coroner's jury, in giving a verdict of accidental death, recommended more care in selecting the timber employed on the works, the beam having been a knotty one.——An extraordinary accident has occurred in the Rue de Grenelle, Paris. A number of labourers were seated on a ladder, each handing to the other above him large stones for building purposes. One of the topmost men was seized with a violent fit of sneezing, so uncontrollable that he dashed the stone in his hands on the man's head below, smashed out his brains, and sent him rolling into the street; dislodging, on his downward way, four more of the labourers.

THE COURTS OF LAW AT WESTMINSTER AND IN THE CITY.—In the Commons, last week, Mr. Montague Smith called attention to the insufficient accommodation in the courts of law at Westminster and in the City of London, and asked the First Commissioner of Works whether it is the intention of the Government to introduce any measure for providing courts suited to the increased wants of the country. Mr. Malins said the evils experienced from the want of proper accommodation in the courts of law sank into insignificance when compared with the condition of the courts of equity. A great deal of important business was conducted in small rooms quite inadequate to accommodate the people who attended; and two of the Vice-Chancellors' courts were so ill adapted for business that they were a disgrace to the country. It was of the utmost importance to provide a central court of justice; and he believed that Lincoln's-inn would be prepared to waive her claim for the equity courts if that object could be effected. If the country did not find the money to erect this palace of justice, he was sure that the suitors would gladly be taxed for that purpose. Mr. Serjeant Pigott hoped the Government would lose no time in re-introducing the measure for consolidating the courts of justice.

PROPOSED AGRICULTURAL AND INDUSTRIAL EXHIBITION IN PARIS, IN 1867.—The Lords of the Committee of Privy Council for Trade have received from the Secretary of State for Foreign Affairs a copy of a French Imperial decree, providing that a Universal Exhibition of Agricultural and Industrial productions shall take place at Paris in 1867, in the Palace of Industry, Carré de Marigny. The Exhibition will be opened on the 1st of May of that year, and will be closed on the 30th of September following. The productions of all nations will be admitted.

GLASS TILES.—Mr. Blumberg has patented an improved method of producing glass paving-tiles or slabs, having thereon suitable designs. The glass is run, in suitable quantities into a pan mould, made of some material capable of bearing a polish, and free from irregularities. A plunger, having a design upon it, is caused to press upon the glass in the pan mould, and in its upper surface a counterpart of the design. Colour may be applied. If the tiles are intended to be laid as paving, the pan mould is indented so that it shall leave small raised projections to give foothold.

THE LATE MR. MULREADY.—William Mulready, R.A., whose death has recently been announced, was a self-made man, and the history of his early life is particularly interesting and instructive. Few persons are aware of the fact that such a history was published so long ago as 1805. It was dedicated by Mulready himself to Godwin, the author of "Caleb Williams," and is illustrated with engravings from sketches made by the artist in his boyhood. It is in every way calculated to stimulate the youthful mind to vigorous action. It is very rarely to be met with, as books of this class, which are published for the young, seldom survive long unless reprinted, and only one edition of the volume in question ever appeared. Its title is as follows:—"The Looking-glass: a True History of the Early Years of an Artist, calculated to awaken the Emulation of Young Persons of both Sexes in the Pursuit of every laudable Attainment, particularly in the Cultivation of the Fine Arts. By Theophilus Marcliffe."

THE WESTMINSTER CLOCK.—The Astronomer Royal reports to the visitors of the Royal Observatory that the rate of this clock, which records itself at Greenwich daily by galvanic connexion, "may be considered certain, to much less than one second a week." The original stipulation was that it should not exceed a second a day, and that was attempted to be set aside as impracticable by some of the candidates for making the clock. Mr. Airy's testimony to its accuracy is the more valuable, as he had retired in 1853 from the joint superintendence of the work on account of some differences with Mr. Denison, Q.C., who designed the clock and invented the "gravity escapement" for it, which has since been adopted in other large clocks. It may not be generally known that most of the wheels are of cast iron: the hands and their appendages weigh about a ton and a half, and the pendulum 6 cwt. The dials are 22½ feet wide, or 400 feet in area each, and cost more than the clock itself. The cracked Big Ben still hangs in the tower, with a hole cut in its side, by which Dr. Percy investigated its real state, and reported it as "porous, unhomogeneous, unsound, and a defective casting."

BEDFORDSHIRE ARCHITECTURAL SOCIETY.—The annual public meeting of this society has recently been held. A large party assembled at St. Paul's Church, and having spent some time in its inspection, proceeded to St. Mary's for the same purpose, where they were met by the Rev. C. Brereton, who with Mr. Hurst pointed out the more remarkable features of the building, and the recent alterations and additions. Mr. Bloxam also remarked upon the early portions of the church, especially the upper stages of the tower. The Old George Inn was next visited, as were also the remains of the House of Grey Friars, called "The Priory." St. Peter's Church was the last object which engaged the attention of the party, who were then entertained by the Rev. W. G. Fitzgerald at St. Paul's Vicarage, and by the Rev. J. W. Haddock, hon. secretary of the society, at his residence. The meeting took place in the afternoon at the Working Men's Institute in Harpur-street. Mr. Bloxam read a paper, in which he gave an account of various brasses and other objects of interest connected with Bedfordshire. Mr. C. L. Higgins then read a paper "On the Monuments in Turvey Church;" the Rev. W. Airy one titled "A Monograph of Bedfordshire Domesday;" and Mr. G. Hurst one "On the Churches of Bedford."

THE LATE MR. GATLEY, SCULPTOR.—We hear with regret of the death of Mr. Alfred Gatley, which took place recently in Rome. Amongst the other works sent by him to the International Exhibition, his colossal bas-relief, "Pharaoh and his Army in the Red Sea," will be specially remembered. It is a work of remarkable merit.

ACCIDENTAL DEATH INSURANCE COMPANY.—According to the annual report of this company the premiums received from all sources during the year amount to upwards of 65,776*l.*, against 47,878*l.* in 1861. The claims during the year were 34,579*l.* 4s. 7d., giving a total since the commencement of the society of no less a sum than 215,579*l.*

REPORT ON THE ROYAL ACADEMY.—The Royal Commission, consisting of Lord Stanhope, Lord Hardinge, Lord Elcho, Sir F. Head, Mr. Stirling, Mr. Danby Seymour, and Mr. H. Reeve, who have been for some time engaged in the inquiry as to the present position of the Royal Academy, have given in their report, to which we may hereafter recur.

THE STATUE IN LEICESTER-SQUARE.—In answer to Mr. Addington, in the Commons recently, Mr. Cowper stated that his attention had been directed to the mutilated condition of the statue of George II. in Leicester-square, but it was not under the jurisdiction of the Government. At the present time no statue could be erected in the metropolis without the consent of the First Commissioner of Works.

NORFOLK AND NORWICH ARCHÆOLOGICAL SOCIETY.—The members of this Society devoted their annual excursion, this year, to a visit to the churches in the neighbourhood of Watton. A tolerably numerous party visited Shipdham, Ovington, Watton, Wayland, Merton, Tottington, Threxton, Cressingham, and Saham. At Merton the party was largely increased, and a descriptive paper was read by the Rev. G. Crabbe, the rector, on the church of Merton. The company also visited Merton Hall and the British tumuli in the park, where some digging had turned up two cinerary urns. At Threxton Mr. Barton, invited the party to a cold collation. The rectors at Little and Great Cressingham conducted them over the churches.

NEW PROCESS OF MAKING FOILS AND CAPSULES.—The following is from a circular issued by Wimshurst's Patent Metal Company:—In 1858 Mr. Wimshurst invented his cutting machine, and took out a patent for cutting lead and tin into sheets. By the process recently patented by Mr. Arthur Kinder, and which this company have acquired, they are enabled to produce, for the manufacture of foils and capsules, a combined metal, consisting of lead or its alloy coated with tin (the perfect combination or union of these two metals taking place spontaneously in the mould), without applying any mechanical pressure whatever to effect their union. There are three modes of combining lead and tin:—1. By melting and mixing them in the melting-pot; 2. By rolling them together (*i.e.*, by pressure); 3. By bringing their surfaces into contact,—the lead being in a solid but hot state, and the tin in a melted state (*i.e.*, without pressure). Mr. Kinder's patent process consists in making a combined metal without pressure, by merely bringing the surfaces of lead and tin together; the lead being cast and in a hot state,—the tin in a melted state; the combined metal being then rolled out into sheets, and foils and capsules made therefrom.

THE ELECTRO-MAGNETIC PHONOSCOPE. — A musical machine, for registering music instantaneously as played, has been invented by Mr. J. Beverley Fenby, of Bute Villa, St. John's, Worcester, according to the local *Herald*. The machine is small, and its motive power is electro-magnetic, produced by a voltaic battery, and working in a manner analogous to the printing telegraph. The machine having been placed *en rapport* with the instrument to be played upon, say piano-forte, harmonium, or organ, the player manipulates the keys in the usual manner, and the machine prints his performance as he goes along, at a speed proportionate to his playing, the usual rate being 15 inches of paper per minute. The printed notation is identical with that already in use, the only difference being that the heads of the notes are square instead of round. The printing, adds our authority, is clear and well defined, and the performer feels not the least impediment or hinderance to his playing from the machine, however rapid or complicated his ideas may be. The performer may compose, play, and print at one and the same time. The patent for this invention has just passed the Great Seal. A similar instrument was noticed in the *Builder* not long ago.

FORTIFICATIONS.—The schedule to the Fortifications Bill states the proposed expenditure at Portsmouth and the Isle of Wight, Plymouth, Pembroke, Portland, Gravesend, Medway and Sheerness, Chatham, Dover, Cork, and for site for a central arsenal. The total estimated cost is 6,920,000*l.*; the amount already voted, 3,200,000*l.*, whereof 2,041,449*l.* had been expended by the 31st of March last. The further sum now proposed is 650,000*l.*, leaving 3,070,000*l.* to be voted in future years.

TENDERS.

For warehouse, Bermondsey:—

Coleman	£2,295 0 0
Wells	2,281 0 0
Preston	2,274 0 0
Simms	2,257 0 0
Wills	2,231 0 0
Little	2,129 0 0

For the erection of warehouse, &c., at Coppin's-court, St. Dunstan's-hill, for Mr. Smith. Mr. Coe, architect:—

Knight	£1,350 0 0
Elston	1,319 0 0
Scott	1,169 0 0
Little	1,095 0 0
Turner	1,083 0 0
King & Sons	1,057 10 0

For chapel at Kentish Town:—

Downs	£1,099 0 0
Collis	996 0 0
Abbott	989 0 0

For road and sewer, on Grove House Estate, Ealing, Middlesex, the property of Mr. James Siark. Mr. Jones, surveyor:—

Adamson & Son	£695 0 0
Bull	559 0 0
Horn	538 0 0
Dawson	515 0 0
Atherton & Co.	500 0 0
Pearce	496 0 0
Sharon	495 0 0
Bennett	490 10 0
Hartland & Co.	489 0 0
Porter (accepted)	450 0 0

For four pairs of semi-detached villas at Bradford. Messrs. Lockwood & Mawson, architects. For the whole works:—

Thomson, Bros.	£14,990 0 0
Keighley & Son	13,300 0 0
J. & J. Beanland	13,240 0 0
Wilson & Son	13,221 0 0
Ives & Son	13,177 0 0
Illingworth	13,144 0 0
Neill	12,877 0 0

A selection from the tenders for the separate trades was made, and the works let for 12,373*l.*

For the restoration and enlargement of Stoke Church, Ipswich. Mr. R. M. Phipson, architect. Accepted tenders:—

Bricklayer's Work.	
Luff	£285 0 0
Carpenter's Work.	
Luff	388 0 0
Mason's Work.	
Farrow	405 0 0
Plumber's Work.	
Steam	85 0 0

For building a new north aisle and benching Holbrook Church, Suffolk. Mr. R. M. Phipson, architect:—

Gould	£937 10 11
Luff	886 0 0
Ringham (accepted)	730 0 0

For building three shops at Ipswich, for Mr. J. C. Cobbold, M.P. Mr. R. M. Phipson, architect:—

Ward	£497 7 8
Chisnall	477 15 6
Luff	392 0 0
Card	397 4 0
Gibbons	338 0 0
Pells	305 0 0
Haxell (accepted)	294 0 0

For widening and partially rebuilding Trowse Bridge, Norwich. Mr. R. M. Phipson, county surveyor:—

Stanley (accepted)	£760 0 0

For the alteration of villas, Nos. 1, 2, 3, and 4, the Heath Estate, Stourbridge, for the representatives of the late Mr. A. B. Cochrane. Mr. Smalman Smith, architect:—

Meddings & Esply	£1,395 0 0
Hartland	1,350 0 0
Bennett	1,150 0 0
For No. 4 only:—	
Chapman	144 0 0
Clare	140 0 0
Bennett (accepted)	140 0 0

For the Sailors' Home, near the London Docks:—

Dudley	£12,784 0 0
Ennor	12,131 0 0
Watts	12,049 0 0
Hack & Son	11,987 0 0
Wood & Co.	11,055 0 9
Lucas, Bros.	11,053 0 0
Piper & Wheeler	10,882 0 0
Myers & Sons	10,664 0 0
Macey	10,626 0 0

For foundry and works at Battersea. Mr. Whichcord, architect:—

Higgs	£6,150 0 0
Holland	5,500 0 0
P'Anson	5,486 0 0
Piper & Wheeler	5,317 0 0
Nicholson	5,218 0 0
Macey	4,959 0 0

For the erection of stables in Brunswick-street, Blackwall, for the London General Omnibus Company. Mr. P. Tosh, architect:—

Munday	£485 0 0
Cave	395 0 0
Kilby	385 0 0
Mann (accepted)	293 0 0

For two pairs of semi-detached cottages, Buckhurst-hill, Essex. Mr. Joseph Harris, architect:—

Rinett	£1,423 0 0
Heath	1,386 0 0
Forrest	1,185 0 0
Reed	1,100 0 0

Accepted tenders for works to be done in the erection of St. Paul's parsonage-house, Sheffield. Messrs. T. J. Flockton & Abbott, architects. Quantities supplied:—

Excavator, Mason, and Bricklayer.	
Reynolds	£758 0 0
Carpenter and Joiner.	
Hayball	465 0 0
Plumber, Glazier, Gas Fitter, and Bell-hanger.	
Townsend	155 0 0
Plasterer.	
Harrison & Chadwick	72 0 0
Slater.	
Copley	60 0 0
Painter.	
Twelves	35 7 6

Accepted tenders for works to be done at Endcliffe Hall, near Sheffield, for Mr. John Brown. Messrs. T. J. Flockton & Abbott, architects. Quantities supplied:—

First contract.—Stable buildings:—

Mason's Work.	
Craven, Brothers	£1,600 0 0
Joiner's.	
Gibson	336 0 0
Slater's.	
Ellis	125 0 0
Plasterer's.	
Harrison	36 19 0
Plumber, &c.	
Townsend	68 0 0
Warming Apparatus.	
J. & C. Ellis	15 15 0

Second contract.—Principal lodge:—

Wade	494 0 0

Third contract.—Second lodge:—

Wade	298 0 0

THE *Standard*, in its description of Benson's Great Clock, says: "A more splendid and exquisitely-finished piece of mechanism we have never seen." Benson's new show-rooms contain clocks designed by the first artists of the day, and include clocks for the drawing-room, dining-room, bed-room, library, hall, staircase, bracket, carriage, church, turret, railways, warehouse, counting-house, with musical, astronomical, and every description of clock, from the plainest to the highest quality of which the art is at present capable. Church and turret clocks specially estimated for. Benson's Illustrated Pamphlet on clocks and watches (free by post for two stamps) contains a short history of clock and watch making, with descriptions and prices; it acts as a guide in the purchase of a clock or watch; and enables those who live in Scotland, Ireland, Wales, the Colonies, India, or any part of the world, to select a clock.—J. W. Benson received a Prize Medal and honourable mention. — 33 and 34, Ludgate-hill, London. E-tablished 1749.—[Advt.]

Very important first class Freehold Building Estate at West Brompton, within six or seven minutes' walk of the Exhibition Building.

MESSRS. DEBENHAM & TEWSON will SELL at the MART, on THURSDAY, JULY 23rd, at TWELVE (unless previously disposed of by private contract), the RIGHT of PURCHASE of an eligible, and very important, plot of FREEHOLD BUILDING LAND, situate immediately adjoining The Bottle-st. of Brompton, together with the two residences known as Rexford House and Colcherne Court, now on the property. The estate possesses frontages on three sides, and being within a few minutes' walk of Hyde Park and the most fashionable precincts of the West-end, offers an unusually fine opportunity for an important building operation in first-class residences. The soil is a deep gravel, and there is an abundant supply of fine spring water.—Particulars, with plans (sent by) of Messrs. J. & J. H. LINKLATER & HACKWOOD, Solicitors, Walbrook; of W. C. CUNDY, Esq. Solicitor, Carlton Chambers, Regent-street; of H. H. CANNAN, Esq. Official Assignee, 36, Basinghall-street; and of the Auctioneers, 80, Cheapside.

UNRESERVED SALE—Harrow, close to the Railway station.—Several Lots of FREEHOLD BUILDING LAND, by order of the Trustees.

MESSRS. DEBENHAM & TEWSON are instructed by the Trustees to SELL, at the MART on WEDNESDAY, JULY 29th, at TWELVE, in Twelve Lots, without the slightest reserve, TWELVE PLOTS of FREEHOLD BUILDING LAND, varying from 20 feet to 200 feet in frontage, and eligible for the erection of villa or cottage residences—one Lot being also appropriated as a site for a public house. Water service is laid on to the estate, and the facilities of access to London offer great inducements to those desirous of obtaining residences in a healthy and rural neighbourhood, within easy reach of the metropolis. First-class free passes for Ten years will be granted by the Company to the occupier of each Lot, built of the value of 50l. per annum.—Particulars of H. CHILD, Esq. Solicitor, Paul's, Bakehouse-court, Godliman-street; and of the Auctioneers, 80, Cheapside.

TO TIMBER MERCHANTS, BUILDERS, AND OTHERS.

TIMBER..... 500 Loads, Fore qu and Colonial.
DEALS and BATTENS..... 100,000 pieces ditto.
and other wood goods.

H. FREEMAN & CO. Brokers, 3, Crooked-lane, E.C

HIGHLY IMPORTANT TO SLATE QUARRY PROPRIETORS AND BUILDERS.

Extensive unreserved Sale of Machinery, Steam Engine, 10,000 of Manufactured Slates, as well as the Interest in the lease of the Bwlch Slate Quarries, situate at Bolwyddelen, near Llanrwst, in the county of Carnarvon

MR. W. DEW has been favoured with positive instructions to SELL by PUBLIC AUCTION on WEDNESDAY, 29th JULY, 1863, commencing at ELEVEN o'clock a.m. precisely, at the said Bwlch Slate Quarry, or that situate from the Railway terminus at Llanrwst, 5 miles from Betwys y Coed, and about 7 miles from the Festiniog Quarries. For sale of the VERY VALUABLE MACHINERY and WORKING PLANT, in Lots, all of which will be found to be of a superior description, and in excellent working order. They consist of 4 Sand Saws—Frames 12 ft. by 8 by 9 Sawing Tables, 2 Planing Machines, valuable Shafting; a fine Water-wheel, 40 feet diameter, 6 feet breast, with iron Buckets; a splendid Horizontal High Pressure Steam Engine, about 15-horse power; 11 Tram Waggons; 6 Iron Skips; 1,300 yards Lineal Tram Rails; Turn Tables; Lots of Pipes, Pulley Blocks, a quantity of Wrought and Cast Iron; Balk and other Timber; and about 28 Tons Materials.

At the commencement of the Sale the present company's Interest in the Lease in the said Bwlch Quarry will be disposed of, which will give the purchaser the advantage of buying upwards of 150 Machinery and Plant now at the Quarries. These Quarries have now been worked for some years, and considering the limited capital that has been employed, the annual yield of Slate has been unusually large. A further small outlay only requires to render this one of the most productive quarries in the country. On THURSDAY, the 30th JULY, 1863, the whole of the STOCK of MANUFACTURED SLATES and SLABS lying on the Trefriw Wharf, will be SOLD by AUCTION, without reserve, at ELEVEN o'clock, consisting of 3,000 Princesses, 2,000 Duchesses, 30,000 Countesses, 3,000 Viscountesses, 10,000 Ladies, 12,000 Doubles, 35 Tons Rags, and about 54 tons of Pinned Slates of various dimensions and thicknesses. Descriptive Catalogues of the whole of which may be had at the principal hotels in North Wales; of GEORGE BADLEY, Esq. 20, St. Helen's Place, Bishopsgate Street, London; Mr. BROTHERHOOD, Llanrwst; and from the Auctioneer, British Hotel, Bangor. The whole on view any day up to the day of Sale.

MR. J. H. LEONARD,

ARCHITECTURAL DRAUGHTSMAN, ARTISTIC COLORIST, AND LITHOGRAPHER, Removed from 21, Montague-street, Russell-square, to 58, TORRINGTON SQUARE, W.C.

ADVANTAGEOUS TERMS are offered by the PROVINCIAL FIRE and LIFE INSURANCE COMPANY to its AGENTS. The Directors are now open to receive applications for Agencies from Builders, Auctioneers, Estate Agents, &c. Terms supplied on application.

ANTHONY DILLON, Secretary to the Company.

Offices, 49, Moorgate-street, E.C.

ARTISTIC EMPLOYMENT.—There are VACANCIES for TWO PUPILS in the Studio of a firm extensively engaged in an interesting branch of Art. A premium will be required, and a salary paid after a certain period.—For particulars apply to L. & P. care of Messrs. Hancock & Co. 30, Carey-street, Lincoln's Inn, London.

AS PUPIL.—An Architect and Surveyor in the City has a VACANCY in his Office for a PUPIL. Premium a secondary consideration.—Address, X. Y. Z. care of Housekeeper, No. 2, Adelaide-place, London Bridge.

TO PARENTS AND GUARDIANS.

AN Architect and Surveyor, residing at a popular watering-place on the eastern coast, who completed his articles with an eminent London architect in 1854, having recently purchased an established practice with which he has been practically connected for the last seven years, has a VACANCY for a well-educated Youth as ARTICLED PUPIL. The connexion affords great facilities for obtaining a thorough knowledge of the profession, practically as well as theoretically; and the advertiser would conscientiously devote a considerable time to that intelligent, personal supervision and instruction for which the mere routine of an office, taken alone, is but a poor equivalent. A taste for the profession necessary. Premium required, from 120l. to 150l. If thought desirable, the pupil could reside with the principal, on moderate terms.—Address, ARCHITECT, care of Messrs. Pattisk & Simpson, 47, Leicester-square, London, W.C.

CLERK WANTED, by an Architect and Surveyor, near London. Must be a good surveyor and draughtsman, understand construction, and prepare working plans, sections and specifications of fourth rate houses; write a good hand, and willing to make himself generally useful. Salary, 30s. per week.—Address stating age, where previously employed, with references, &c. to BETA, 42, Chancery-lane, London.

CARPENTER & COLLECTOR WANTED, to attend to the GENERAL REPAIRS of a Lot of Houses, chiefly small. He must be strictly sober, a good workman, active, and not afraid of work. Constant employment at 24s per week. Good personal security for 50l. indispensable.—Apply, by letter only, in own handwriting, to P. 21, Walbrook, City.

WANTED, by an Architect, a practical and experienced CLERK, to superintend works, take up extras and omissions, and generally acquainted with the details of buildings, &c.—Address, A. D. Mr. Schraders's, 45, St. Mary Axe, E.C.

TO ARCHITECTS' ASSISTANTS

WANTED, immediately, an ASSISTANT well versed in Gothic architecture and able to make good working drawings. Must be practical, and a neat draughtsman. First-class references required. Apply to W. H. CROSSLAND, 17, Albion-street, Leeds

WANTED, some good MARBLE MASONS, who can put together Chimney Pieces. Also some MARBLE SAWERS.—Apply at 145, Euston-road, N.W.

TO MOULDERS.

WANTED, a thoroughly experienced FOREMAN (not club preferred), to take the management of a Foundry, employing about 20 men, under the principal. He must perfectly understand loam, dry sand, and core work, also green sand, heavy and light. Application to be made, stating age, with references as to sobriety, character, and Ability, to S. & P. Engineers, Box 31, Post office, Bath.

TO SHOP FOREMEN.

WANTED, by a London Firm, a first-class FOREMAN of JOINERS.—Address, stating age, salary, and where last employed, to L. & B. Office of "The Builder."

TO ARCHITECTURAL DRAUGHTSMEN.

WANTED, in an Architect's Office in London, an ASSISTANT, who must be a first rate draughtsman, accustomed to prepare perspective drawings, and thoroughly acquainted with Gothic details. A fair salary will be given.—Address, stating full particulars, to H. H. Office of "The Builder."

WANTED, two good FOREMEN of BRICKLAYERS, to Superintend some Works in the Country. These used to Kentish Rag Rubble Masonry preferred. None but those that can give the highest testimonials need apply.—Address, stating salary required, to A. Z. Pass's Library, 19, Brecknock place, Camden-road-villas.

WANTED, for a short period, in an Architect's Office, an ASSISTANT, capable of making plans, working and detail drawings, specifications, taking our quantities, &c.—Apply to R. P. 1, Raquet-court, Fleet-street, E.C.

TO ARCHITECTS, SURVEYORS, BUILDERS, &c.

WANTED, by a CLERK of WORKS, an ENGAGEMENT, or with a Builder. Sixteen years' experience. A Joiner, well acquainted with the other branches, book-keeping, making plans, taking out quantities, pricing estimates, measuring up work, &c. First-class references.—Address, CHARLES EDWARDS, at Shaw's Library, 28, Oxford-street, W.

TO BUILDERS.

WANTED, a SITUATION, as CLERK, in a BUILDER'S OFFICE. Has been in very large firms for six years, and thoroughly understands the routine of office duties.—Apply, Y. C. 4, Commercial-place, Commercial-road, E.

C. E. 9, Trelick-terrace, Vauxhall-road, Pimlico, London, S.W.

DURABILITY of GUTTA PERCHA TUBING Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have taken pleasure in giving the following letter FROM SIR RAYMOND JARVIS, Bart VENTNOR, ISLE of WIGHT. Second Edition. — "March 10th, 1862.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly Many builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

DIMENSIONS TAKEN ON THE SPOT of BUILDINGS, in any part of the country, and Plans, Elevations, and Sections laid down to any scale for Architects, &c. Drawings and Specifications neatly copied by F. BROWN, Hambrook, near Bristol.

Near Astley's Theatre,
Respectfully inform the Public that their Illustrated Price-List will be forwarded free on application. The prices will be found remarkably low. Every article warranted. Second-hand Instruments of all kinds, by the best makers, always in stock.

BUILDING LAND, UPPER NORWOOD, close to the Crystal Palace.—TO BE LET, for the erection of small VILLAS, a class of residence much needed, and certain to let before completed. Advances if required.—Apply to Mr. T. K. GREEN, Architect, 25, College-hill, Cannon street, E.C.

WEST-MALVERN PARK.—This Freehold and well Timbered ESTATE is now ready for the SELECTION of SITES for Private Villa Residences.—Plans and further particulars apply to GEORGE MASEFIELD, Esq. Solicitor, Ledbury; Mr. HENRY WEBB, Land Surveyor, Worcester; Mr. C. WHITE, Blackheath Cottage, West Malvern

GROUND RENTS.—WANTED to PURCHASE, about 120l. PER ANNUM in FREEHOLD GROUND RENTS, well secured on a good class of London house property.—Full particulars and terms to be sent to Messrs. DANIEL SMITH, SON, & OAKLEY, 11, Waterloo place, Pall mall, S.W.

TO BUILDERS.—The Directors of the Farnborough and Aldershott Freehold and Ground rent Society (Limited) are willing to receive APPLICATIONS for BUILDING SITES on advantageous terms, on their Estate at Farnborough, adjoining the North Camp.—Application to be made to the Architect, H. CURREY, Esq. 4, Lancaster place, Strand; or at the Offices of the Society, No. 18, New Bridge-street, Blackfriars.
EDWARD CHATFIELD, Managing Director.

BUILDING LAND, MILE END.—TO BE LET, on Building Lease, a valuable PLOT of FREEHOLD LAND, situate in North-street, Mile End, suitable for the erection of either shops, dwelling houses, or manufacturing premises. It occupies an area of nearly two-thirds of an acre, and has an extensive frontage.—For terms and other particulars apply to Mr. N. S. JOSEPH, Architect and Surveyor, 27A, Buckingham, Strand.

MANUFACTURING WATERSIDE PREMISES, occupying about an acre of ground.—TO BE LET on lease, direct from the freeholder, for a building term, if desired, convenient to be placed MANUFACTURING PREMISES, situate at West Ham Abbey, Essex, a few minutes' walk from the Stratford Bridge Station of the North Woolwich Railway, and with waterside frontage next the Channel Sea River. The ground occupies a site of about one acre. The buildings are spacious ground floor erections, and there is a hand-some and lofty brick chimney-shaft.—For particulars, apply to Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

BROMLEY, Middlesex.—TO BE LET or SOLD, near the Church, a Convenient Detached FAMILY RESIDENCE, containing twelve rooms, yard in rear, with stabling, coach-house, &c.; in front a large and productive walled-in garden. Also, Eligible BUILDING LAND, with extensive frontages to the main street and River Lea, suited for public institutions or manufactories.—For particulars, and to treat, apply, personally, to Messrs. CRAWTER, Surveyors, Land Agents, &c. 5, Bedford row, Gray's inn.

BUILDING LAND TO BE LET, at Beckenham, where large houses let or sell before finished Money advanced, if required.—Apply to Mr. B. PARKS, Lewisham. There are now seven built and occupied.

RIPON.—EIGHT ACRES of BUILDING LAND for SALE, at 3s. to 3s. 6d. per yard, in lots varying from 900 to 1,500 yards. The whole has been laid out for detached and semi-detached villa residences. The land is close to the town, adjoining the Harrogate road, and commands beautiful views of the rich wooded scenery of Studley, the fells, main drains, and central garden roads by the vendors.—For further particulars apply to
ROBERT WILLIAMSON, } Hon Secs
Ripon, June 30, 1863. JOSH. STEVENSON, }

CITY of LONDON. BARBERS' HALL. TO BE LET, on a Building Lease, Nos. 33, 34, and 35, Monkwell-street, Wood-street, and a portion of the Court-yard Hall and Offices in the rear.—For particulars and plans, apply to the Beadle, at the Hall; or to the Clerk, HENLEY GROSE SMITH, Esq. 4, Warnford-court, Throgmorton-street, E.C.; or to Mr. C. J. SHOPPEE, Architect, 61, Doughty street, W.C.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land tax redeemed, conveyance free. Also, PLOTS TO BE LET, on a Building Lease, for ninety-nine years.—For plans, &c. apply by post, pre-paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

LAND, situate on Bromley-hill, Kent, TO BE LET on Building Lease, suitable for the erection of villas for residence or investment, they being in great demand in that locality. The Land is within ten minutes' walk of the Shortlands Station, and in a beautifully wooded district. The site is elevated, it has a sub-soil of white sand and dry gravel, and a supply of very fine spring water.—Apply to JOHN WIMBLE, Esq. 2, Walbrook, E.C.

ELIGIBLE BUILDING LAND TO BE LET, on 99 years' Lease, in the best part of Stoke Newington, where houses are in great demand. Brick on the estate, and supplied at a low price.—Apply to Mr. RODDA, Bouverie-road, Church-street, Stoke Newington.

TO BE LET, a capital WHARF and DRAWDOCK, known as "Searle's Wharf," most eligibly situated at the foot of New Westminster Bridge, and opposite the Houses of Parliament
This drawdock has been closed for some years, and is now re opened.
From its excellent situation and the probability of the Scotland-yard Wharfs being closed at an early date by the Thames Embankment, a very valuable business may no doubt be depended on.
A residence is attached, which may or may not be taken with the wharf or drawdock.
Apply to Mr. W. HEWETT, 84, York-road, Lambeth.

WOODFORD RAILWAY.—The GROVE, WANSTEAD.—Portions of this beautiful Estate are now to BE LET for Building purposes, and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Snaresbrook Station is 400 yards only from the Estate, and the City is reached in twenty-five minutes. The Lessee will contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Buckhurst, Tottenham, Kingsbury; some very eligible SITES in the Grove road, Mile end, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 25, Cannon-street.

CAPITAL PREMISES TO LET, with light and lofty workshops, 150 feet long, in Westminster. Also a House and Office.—Apply to Mr. TYLER, 4, Wood-street, Abingdon-street, S.W.

IMPORTANT WATERSIDE PREMISES. TO BE LET, HOUSE, OFFICES, and WAREHOUSES together 245 feet by 100 feet, in Bridge Road Battersea, and Upper Pulteney street. Also BUILDING LAND TO BE LET at HOLLOWAY, CROYDON, HARROW, and GRANGE ROAD, Sussex. Liberal advances made.—Apply to Mr. E. C. BOBINS, Architect, 13, Southampton-street Strand.

BUILDER'S PREMISES, HACKNEY.—TO BE LET, on lease, a capital YARD, with spacious workshops and office all with gas, built to existing requirements.—For particulars, apply to Mr. THOMAS BULL, Auctioneer, 60, Cornhill, E.C.

PUTNEY Main ROAD.—To BUILDERS.—The remaining Portion of this valuable BUILDING LAND TO BE LET or LEASE; all frontage and about 100 yards from the Station. Liberal advances made to respectable parties.—Apply to J. H. ROWLEY, Esq. Architect, D., St. Helen's place, City.

TO CONTRACTORS, BUILDERS, and BRICKMAKERS.—Near to Morden, Old Malden, and Worcester Park and Sutton Railway Stations. TO BE LET, about EIGHTY ACRES of very first-rate BRICK EARTH LAND, which may be worked (without brickmaking plant) at a moderate royalty. Specimens of various strata may be seen from the clay may be inspected, and further information obtained at the Offices of Messrs. WIGG, SON, & OLIVER, 7, Bedford-row, W.C.

BUILDING LAND.—TO LET, on Building Leases, on favourable terms, TWO eligible PLOTS of GROUND, near Gray's Inn. Well adapted for Chambers.—For particulars apply to Messrs. CARDALE, ILIFFE, & RUSSELL, Solicitors, 2, Bedford-row; or to H. B. GARLING, Esq. Architect, 11, King's-road, Gray's Inn, where plans of the Ground may be seen.

BUILDING GROUND TO BE LET or SOLD, at Wandsworth-common and Wimbledon, close to the Clapham Junction and Wimbledon stations. Suitable for semi-detached villas. Part values of Mr. H. JOHNSON, Architect and Surveyor, 22, Buckingham street, Strand.

LEYTONSTONE.—A FREEHOLD ESTATE FOR SALE by Private Contract, Harrow green, Leytonstone-road, Essex; containing about eighteen acres of good gravel and brick earth. Also a detached Freehold twelve-roomed Residence, pleasantly situated on part of the land fronting the High-road to Leytonstone, a few minutes' walk from the Leyton and Leytonstone stations of the London, Woodford, and Loughton Railway, with brick-built stable, coach-house, and granary; a well-stocked orchard, fish-pond, and garden, with 330 feet frontage to the Leytonstone-road; let for a term expiring at Lady-day next, at the low rent of 62l. per annum. The house, garden, &c. to be sold in one lot; the remainder in two or three lots, to suit purchasers.—For particulars, and to view the estate, apply to J. INGHAM, on the Estate; or to J. OTWAY, Esq. Solicitor, Stratford-grove, Essex.

BELLMAN & IVEY,
GENERAL AND ORNAMENTAL PLASTERERS,
Manufacturers of
SCAGLIOLA MARBLE
and
SUPERIOR PLASTER OF PARIS.
This Plaster, made expressly for their own business, is of excellent quality, and its extreme lightness in weight ensures a saving of 30 per cent. in use, from its covering one third more superficies than the general plaster.
PRIZE MEDALS
were awarded Messrs. Bellman & Ivey for their Works at the Exhibition of 1851, and again in 1862.
PLASTER WORKS, 3, BEDFORD STREET, LIQUORPOND STREET, LONDON, E.C.

TISBURY STONE.
The WARDOUR (CHILMARK) and TISBURY STONE COMPANY, Limited,
Are prepared to execute orders to any extent for their TISBURY STONE.—This is a close, fine-grained Stone, of a beautiful colour, possessing all the qualities of the best Portland, in which range it is placed geologically.
It will supply the long wanted desideratum of the Architect, Builder, and Sculptor, as the Stone is a first-class Weather Stone, easily worked, and carries a fine arris; and is eminently adapted for carved moulding, high class architecture, and works of art, requiring only to be known to become the
STONE OF THE DAY
Specimens, prices, &c. may be obtained of
SAMUEL TRICKETT,
General Stone Merchant, Millwall; or at the Offices of the Company, 3, Adelaide place, London Bridge
